NASA Competency Management System (CMS)

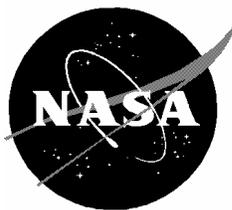

CMS-DOC-01

OFFICE OF HUMAN CAPITAL MANAGEMENT

Issue Date: 10-08-2009

Revision: 7A

This document was prepared for and is the property of the National Aeronautics and Space Administration and has not been approved for public release.

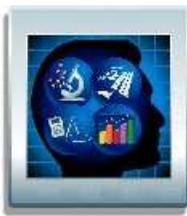

National Aeronautics and
Space Administration

Headquarters
Washington, DC

PREFACE.....	11
PURPOSE.....	11
CMS USAGE POLICY	11
Intended Use	11
Restrictions and Limitations	11
Disclaimer.....	12
BUSINESS RULES & GUIDELINES	12
REVISION HISTORY	14
1. Business Knowledge Domain	16
1.1. Business Operations Competency Suite	16
1.1.1. Partnership & Business Development (BUSDEV) [116].....	16
1.1.2. Business IT Systems (BITSYS) [131]	16
1.1.2.1. Information Resources Planning and Evaluation (BITPLAN) [1078]	16
1.1.2.2. IT Architecture (BITARCH) [1079].....	16
1.1.2.3. Information Systems Security (BITSECURE) [1081]	16
1.1.2.4. IT System and Requirements Analysis (BITRQMTS) [1140]	17
1.1.2.5. IT Sourcing and Asset Management (BITSOURCE) [1141].....	17
1.1.2.6. IT Innovation Management (BITINNOVATE) [1142].....	17
1.1.2.7. IT Service Management and Delivery Operations (BITSERVICE) [1143].....	17
1.1.2.8. Information Management (BITINFOMMT) [1144]	17
1.1.3. Business Management (BUSMMT) [113].....	17
1.1.4. Commercial Technology (COMTEC) [117].....	17
1.1.5. Education Programs and Technologies (EDTECH) [137].....	18
1.1.6. Export Control (EXPORT) [144].....	18
1.1.7. Governmental Affairs (GOVAF) [136].....	18
1.1.8. Inspection, Investigation and Compliance (INSCOMP) [127].....	18
1.1.9. Legal Assistance (LEGALSUP) [176].....	18
1.1.9.1. Paralegal (PARALEGAL) [1082].....	18
1.1.9.2. Patent Agent (PATENTAGT) [1114].....	19
1.1.10. Legal Application Practice (LEGALAPP) [125]	19
1.1.10.1. Intellectual Property Law (INTPROPLAW) [1083].....	19
1.1.10.2. General Law (GENERALLAW) [1084]	19
1.1.10.3. Contracts Law (CONTRCTLAW) [1085]	19
1.1.10.4. Personnel/EEO Law (PERSONLAW) [1086].....	19
1.1.10.5. Environmental/Real Property Law (ENVLAW) [1087].....	19
1.1.10.6. International Law (INTLLAW) [1112].....	19
1.1.10.7. Commercial Law (COMMLAW) [1113].....	20
1.1.11. Public Communications & Outreach (PUBLICOMM) [135]	20
1.1.12. International Program Development (INTLPGMDEV) [157].....	20
1.1.13. Policy Management (POLICYMGMT) [169].....	20
1.2. Financial Operations Competency Suite	20
1.2.1. Budgeting Management (BUDGETMMT) [119]	20
1.2.2. Cost Estimation and Analysis (COSTEST) [121].....	21
1.2.3. Financial Management (FINMMT) [118].....	21
1.2.4. Internal Control / Audit (INTAUD) [120]	21
1.3. Institutional Operations & Support Competency Suite	21
1.3.1. Institutional Environmental Engineering & Management (ENVENGMMT) [133].....	21
1.3.1.1. Institutional Environmental Planning/NEPA (ENVPLAN) [1088].....	21
1.3.1.2. Institutional Environmental Remediation (ENVREMED) [1089]	22
1.3.2. Fire Protection Engineering (FIREPROT) [143]	22

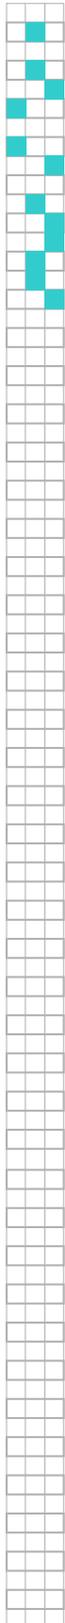

NASA Competency Management System

Workforce Competency Dictionary

- 1.3.3. Master Planning (MASTERPLAN) [167]..... 22
- 1.3.4. Institutional Logistics, Supply and Transportation (LOGSUPTRAN) [134]..... 22
- 1.3.5. Security & Program Protection (SECURITY) [126] 23
 - 1.3.5.1. Physical Security (SECPHYSCL) [1072] 23
 - 1.3.5.2. Counterintelligence/Counterterrorism Analysis, Investigation and Liaison (SECOUNTER) [1073]..... 23
 - 1.3.5.3. Information Security (SECINFO) [1074]..... 23
 - 1.3.5.4. National Security Systems (SECNATION) [1075]..... 23
 - 1.3.5.5. Personnel Security (SECPERSON) [1076]..... 23
 - 1.3.5.6. Industrial Security (SECINDUST) [1077]..... 23
- 1.3.6. Emergency Management (EMERGMT) [151]..... 24
- 1.3.7. Occupational and Environmental Health (OCCHEALTH) [130] 24
 - 1.3.7.1. Occupational Medicine (OCCMED) [1066]..... 24
 - 1.3.7.2. Industrial Hygiene (OCCHYGIENE) [1067]..... 24
 - 1.3.7.3. Health Physics (OCCPHYSICS) [1068]..... 25
 - 1.3.7.4. Employee Assistance (OCCASSIST) [1069]..... 25
- 1.3.8. Facilities Engineering and Management (FACENG) [112] 25
 - 1.3.8.1. Facility Civil Engineering (FACIVENG) [1090]..... 25
 - 1.3.8.2. Facility Mechanical Engineering (FACMECHENG) [1091] 25
 - 1.3.8.3. Facility Electrical Engineering (FACELECENG) [1092]..... 25
 - 1.3.8.4. Construction Management (FACONSTMMT) [1096]..... 26
 - 1.3.8.5. Real Property Management (FACPROPRTY) [1097]..... 26
 - 1.3.8.6. Facilities Operations and Maintenance (FACOPSMAN) [1098]..... 26
- 1.3.9. Institutional Aircraft Operations (AIROPS) [152]..... 26
- 1.3.10. Research, Development or Flight Facility Planning (FACFLTPLAN) [168]..... 26
- 1.3.11. Workplace Safety (WORKSAFETY) [150] 26
- 1.4. Workforce Operations & Support Competency Suite 27
 - 1.4.1. Diversity Management (DIVERSEMMT) [158]..... 27
 - 1.4.2. Human Capital Management (HUMCAPMMT) [128]..... 27
 - 1.4.2.1. Classification (HCMCLASS) [1115]..... 27
 - 1.4.2.2. Compensation (HCMCOMP) [1116]..... 27
 - 1.4.2.3. Employee Benefits (HCMEMPBENF) [1117]..... 27
 - 1.4.2.4. Employee Development (HCMEMPDEV) [1118] 27
 - 1.4.2.5. Employee Relations (HCMEMPREL) [1119]..... 28
 - 1.4.2.6. Labor Relations (HCMLABOR) [1120] 28
 - 1.4.2.7. Performance Management (HCMPERFMGT) [1121] 28
 - 1.4.2.8. Recruitment/Placement (HCMRECRUIT) [1122]..... 28
 - 1.4.2.9. Workforce Planning (HCMWORKPLN) [1123] 28
 - 1.4.3. Equal Opportunity Management (EEOMMT) [129]..... 28
 - 1.4.4. Professional Administrative Operations (PROFADMOPS) [115]..... 28
 - 1.4.5. Para-Professional Business Operations (PARABUSOPS) [165]..... 28
 - 1.4.6. Student Trainee (STUDENT) [174]..... 29
 - 1.4.6.1. Technical Student Trainee (STUTECH) [1101] 29
 - 1.4.6.2. Clerical Student Trainee (STUCLERICAL) [1102]..... 29
 - 1.4.6.3. Professional Administrative Student Trainee (STUPROFADM) [1103]..... 29
- 1.5. Acquisition Community Competency Suite 29
 - 1.5.1. Contracting Officer Technical Representative (COTR) Support (COTR) [180] 29
 - 1.5.1.1. Procurement Planning and Contract Formation (COTRSUB1) [1138]..... 29
 - 1.5.1.2. Contract Management (COTRSUB2) [1139]..... 29
 - 1.5.2. Acquisition and Contract Management (CONMMT) [124]..... 29
 - 1.5.2.1. Acquisition Planning (ACQPLAN) [1093]..... 30
 - 1.5.2.2. Contract Formation (CONFORMAT) [1094]..... 30

1.5.2.3.	Contract Management and Performance Assessment (CONPERFORM) [1095].....	30
2.	Engineering & Technology Knowledge Domain.....	30
2.1.	Engineering of Systems Competency Suite.....	30
2.1.1.	Design and Development Engineering (DESDEVENG) [8].....	30
2.1.1.1.	Structural Design and Development Engineering (DDESTRUCT) [1028].....	30
2.1.1.2.	Electrical Design and Development Engineering (DDEELEC) [1029].....	31
2.1.1.3.	Propulsion Design and Development Engineering (DDEPROP) [1030].....	31
2.1.1.4.	Test Fixtures and GSE Design and Development Engineering (DDETEST) [1031].....	31
2.1.2.	Engineering and Science Support (ENGSCISUP) [11].....	31
2.1.3.	Integration Engineering (INTEGENG) [9].....	31
2.1.3.1.	Structural Integration Engineering (INTSTRUCT) [1032].....	32
2.1.3.2.	Materials Integration Engineering (INTMATER) [1033].....	32
2.1.3.3.	Systems Integration Engineering (INTSYSTEMS) [1034].....	32
2.1.3.4.	Electrical Integration Engineering (INTELECT) [1035].....	32
2.1.3.5.	Propulsion Integration Engineering (INTPROPEL) [1036].....	32
2.1.4.	Manufacturing Engineering (MANUFACT) [24].....	33
2.1.5.	Process Engineering (PROCESENG) [114].....	33
2.1.6.	Systems Engineering (SYSTEMSENG) [7].....	33
2.1.7.	Test Engineering (TESTENG) [10].....	33
2.1.7.1.	Structural Test Engineering (TSTSTRUCT) [1037].....	34
2.1.7.2.	Materials Test Engineering (TSTMATER) [1038].....	34
2.1.7.3.	Thermal Test Engineering (TSTTHERMO) [1039].....	34
2.1.7.4.	Electrical Test Engineering (TSTELECT) [1040].....	34
2.1.7.5.	Propulsion Test Engineering (TSTPROPUL) [1041].....	34
2.1.8.	Entry, Descent and Landing (EDL) [177].....	35
2.2.	Systems Analysis & Mission Planning Competency Suite.....	35
2.2.1.	Advanced Mission Analysis (ADVMIS) [89].....	35
2.2.2.	Aerospace Systems Concept Development & Technology Assessment (ASCDTA) [90].....	35
2.2.3.	Mission Analysis and Planning (MAP) [1].....	35
2.2.4.	Mission Flight Design (FLTDSG) [2].....	35
2.2.5.	Simulation Systems (SIMULATE) [175].....	35
2.3.	Aeronautics Competency Suite.....	36
2.3.1.	Acoustics (ACOUSTICS) [103].....	36
2.3.2.	Aerodynamics (AERODYN) [101].....	36
2.3.3.	Aeroelasticity (AEROELA) [100].....	36
2.3.4.	Aerothermodynamics (AEROTHM) [102].....	37
2.3.5.	Air Traffic Systems (AIRTRAFFIC) [108].....	37
2.3.6.	Flight Dynamics (FLTDYN) [98].....	37
2.3.7.	Simulation/Flight Research Systems (SIMFLTSYS) [110].....	37
2.4.	Human and Biological Competency Suite.....	37
2.4.1.	Aerospace Medicine (AEROMED) [36].....	37
2.4.1.1.	Medical Practice (MDPRACTICE) [1070].....	37
2.4.1.2.	Behavioral Health (MDBEHAVIOR) [1071].....	37
2.4.2.	Bioengineering (BIOENG) [58].....	38
2.4.3.	Biomedical Engineering (BIOMEDENG) [35].....	38
2.4.4.	Biomimetics (BIOMIMETIC) [59].....	38
2.4.5.	Crew Systems and Aviation Operations (CSAOPS) [97].....	38
2.4.6.	Extravehicular Activity Systems (EAS) [38].....	38
2.4.7.	Environmental Control and Life Support Systems (ECLSS) [37].....	38
2.4.8.	Environmental Factors (ENVFACT) [39].....	39
2.4.9.	Fundamental Human Factors Research (HUMFACTRES) [40].....	39

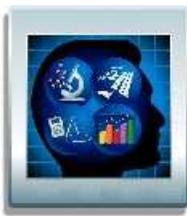

NASA Competency Management System

Workforce Competency Dictionary

2.4.9.1.	Biomechanics and Ergonomics Fundamental Research (HFRBIOMECH) [1005]	39
2.4.9.2.	Habitability and Environmental Psychology Fundamental Research (HFRHABIT) [1006]	39
2.4.9.3.	Perception and Psychophysics Fundamental Research (HFRPERCEPT) [1007]	39
2.4.9.4.	Psychophysiology Fundamental Research (HFRPSYPHY) [1008]	40
2.4.9.5.	Fatigue, Alertness, Circadian Rhythms Fundamental Research (HFRATIGUE) [1009]	40
2.4.9.6.	Cognitive Science Fundamental Research (HFRCOG) [1010]	40
2.4.9.7.	Communication and Knowledge Management Fundamental Research (HFRCOMM) [1011]	41
2.4.9.8.	Decision Making and Risk Management Fundamental Research (HFRDECISMK) [1012]	41
2.4.9.9.	Organizational Science Fundamental Research (HFRORG) [1013]	41
2.4.9.10.	Human-Machine Interaction Fundamental Research (HFRHUMMACH) [1014]	41
2.4.9.11.	Manual Control Fundamental Research (HFRMANCNTL) [1015]	42
2.4.9.12.	Training and Adaptation Fundamental Research (HFRTRNG) [1017]	42
2.4.9.13.	Human Performance Fundamental Research (HFRHUMPERF) [1018]	42
2.4.10.	Human Factors Engineering (HUMFACTENG) [41]	43
2.4.10.1.	Biomechanical Engineering, Technology, Standards (HFEBIOMECH) [1019]	43
2.4.10.2.	Space Human Factors Engineering, Technology, and Standards (HFESPACE) [1021]	43
2.4.10.3.	Habitability Engineering, Technology, and Standards (HFEHABIT) [1022]	44
2.4.10.4.	Perceptual Technologies and Standards (HFEPERCEPT) [1023]	44
2.4.10.5.	Cognitive Technologies (HFECOG) [1024]	44
2.4.10.6.	Human-Automation System Design (HFEHUMAUTO) [1025]	45
2.4.10.7.	Training Technologies (HFETRNG) [1026]	45
2.4.10.8.	Human Reliability and Human Error Analysis (HFEHUMERR) [1027]	45
2.5.	Chemical Competency Suite	46
2.5.1.	Chemistry/ Chemical Engineering (CHEMENG) [25]	46
2.5.2.	Pyrotechnics (PYROTECH) [18]	46
2.6.	Computer Science & Information Technology Competency Suite	46
2.6.1.	Computer Systems and Engineering (COMPSYSENG) [80]	46
2.6.2.	Data Systems and Technology (DATSYS) [161]	46
2.6.2.1.	Database Management Systems (DATDBMMT) [1080]	46
2.6.2.2.	Large Scale Data Systems (DATLARGE) [1099]	46
2.6.2.3.	Data Visualization (DATVISUAL) [1100]	47
2.6.3.	Intelligent/Adaptive Systems (IASYS) [85]	47
2.6.4.	Network Systems and Technology (NETSYS) [81]	47
2.6.5.	Neural Networks & Systems (NEUNETSYS) [84]	47
2.6.6.	Robotics (ROBOTICS) [79]	47
2.6.7.	Software Engineering (SWENG) [82]	48
2.6.8.	Imaging Analysis (IMAGING) [166]	48
2.7.	Electrical & Electronic Competency Suite	48
2.7.1.	Avionics (AVIONICS) [21]	48
2.7.2.	Communication Networks & Engineering (COMNETENG) [60]	48
2.7.3.	Electro-Mechanical Systems (ELMECHSY) [15]	48
2.7.4.	Electrical and Electronic Systems (ELSYS) [13]	48
2.7.4.1.	Instrumentation Systems (ELINSTR) [1042]	49
2.7.4.2.	EEE Parts (ELEEEPART) [1043]	49
2.7.4.3.	Parts & Packaging (ELPARTSPKG) [1044]	49
2.7.4.4.	Electrical Circuits Engineering (ELCIRCUITS) [1045]	49
2.7.5.	Flight and Ground Data Systems (FLTGNDSYS) [19]	49
2.7.6.	Control Systems, Guidance & Navigation (GNC) [22]	49
2.7.6.1.	Spacecraft & Stabilization Control Design and Analysis (GNCSPACE) [1046]	50
2.7.6.2.	Vehicle Control Design and Analysis (GNCVEHCNTL) [1047]	50
2.7.6.3.	Guidance Design and Analysis (GNCGUIDE) [1048]	50

NASA Competency Management System

PREFACE

PURPOSE

The NASA Competency Management System (CMS) is a collection of business processes and tools that are used to measure and monitor the Agency's corporate knowledge base. A competency is a conceptual representation of a body of knowledge. The competencies are used to categorize the capabilities of an employee, identify the knowledge requirements of a job position, forecast the workforce requirements for a project, and stimulate the interaction and sharing of knowledge across the Agency.

CMS USAGE POLICY

Intended Use

Strategic Human Capital Management: The Competency Management System is primarily a workforce-planning tool that will help the Agency ensure it has the competencies needed for the future workforce. It identifies competencies for employees, job positions, and program/projects. By combining this data with other related information (such as project schedules, mission priorities, allocated resources, etc.), it provides insight into the Agency's workforce capabilities, which enables appropriate decision makers to set guidelines for human capital programs (such as staffing, training, etc.). The program managers can use the competency information to augment other workforce information to align the workforce to the Agency's mission.

Integration of Business Processes: The Competency Management System provides a frame of reference. This allows business processes that are related, to map their objectives and data to competencies. This allows the exchange and integration of information between the processes utilizing a common language.

Employee Development: The Competency Management System provides employees and supervisors an additional avenue to help determine the knowledge areas. This sets the focus for defining the appropriate developmental activities that would further enhance the employee's capabilities.

Expertise Locator: The Competency Management System provides employees, supervisors, project managers, functional offices, enterprise management, and senior leadership the capability to locate expertise within the Agency's Workforce. It provides insight the Agency's Corporate Knowledge Base

Knowledge Management: The Competency Management System can help connect employees with the same or similar competencies into communities of practice. This allows other systems and tools, such as portals, to more easily connect the community with other knowledge management tools (such as Lessons Learned, Technical Documents, etc.) that are similar or related to the competency.

Communication Tool: The Competency Management System provides a mechanism to understand the Agency's Corporate Knowledge Base that enables improved communication across project, functional, and organizational boundaries in an effort to realize and apply the full capability of the workforce to accomplish NASA's mission by providing a consistent language and framework.

Restrictions and Limitations

Job Selection: The Competency Management System is not designed or used as an Agency employment and selection system. It does not meet, nor is required to meet, the Uniform Guidelines on Employee Selection Procedures (29 CFR

1607). When defining a job, competencies relate to, and can help define, the knowledge requirements for the position. But there are several other qualifications factors (such a duties, skills, abilities, location, job environment, etc.) that are defined and used during the competitive selection process. [For detailed information about the job selection process, see the NASA HR Desk Procedure on “The NASA Competitive Placement Plan for Positions GS-15 and Below (Including Trades and Labor Positions)”]

Pay Setting: Most employees are in pay systems that are position-based. This means that basic pay is determined by the classification of the duties and responsibilities of the position to a particular grade or pay level. The intent of the federal pay system is to ensure that there will be equal pay for equal work. Competencies help to define the Knowledge part of the position requirements. Some competencies are required for a position and help to determine grade and pay. However, these competencies are defined and delineated via the job analysis and classification process, NOT through CMS. Other competencies an employee may possess are associated with an individual and do NOT apply to grade or pay determination. [For detailed information about pay setting, see the NASA Desk Guide on “Pay Setting”]

Employee Performance Evaluation: An employee’s performance plan will be based on an employee’s work assignments and responsibilities and must contain at least one element that addresses the individual's performance and its relationship to NASA’s Strategic Plan. Competencies are a body of knowledge and therefore cannot be used to plan or evaluate employee performance. [For detailed information about employee performance, see the NASA Policy Guide 3430.1A “NASA Employee Performance Communication System (EPCS)”]

Task/Work Assignments: Competency information can provide supervisors with limited information about what an employee may know. It does not capture or communicate the other items that a supervisor would need in order to assign an employee to a particular task or job, such as how the employee applied their knowledge (which projects, products, tasks) how the employee performs, other special skills or capabilities that an employee may posses, availability of the employee, among others. The Competency Management System is not intended to replace supervisor judgment or direct communication with employees. [For detailed information about work assignments, contact your supervisor]

Other: Any application, or use of the competency data must comply with all related NASA HR Policies and Guidelines.

Privacy Act Notice:

Records that relate to employees contained in the Competency Management System (CMS) are subject to the Privacy Act and must be safeguarded against unauthorized disclosure in accordance with 14 C.F.R. 1212.605. Unauthorized disclosure of Privacy Act records may result in criminal penalties under 5 U.S.C. 552a(i)(1) and (2).

Disclaimer

The content in this section on the CMS Usage Policy is provided to the reader as a synopsis of how the competency information and implementation relates to selected NASA Human Resource Policies and Procedures, which are governed by extensive Federal Laws, Regulations, and Guidelines. This information does not supplement or supersede any NASA Agency, or Center, HR Policy or desk procedure. For any questions about competency information as it relates to personnel actions please contact the Human Resource Office at your Center.

BUSINESS RULES & GUIDELINES

- (1) Guidelines for the number of competencies per position: The intent of the process is to identify competencies that are required for a job position AND that would be utilized most of the time, or are critical knowledge areas for the position. It is not the intent of the system to capture every possible competency that could be used. Every position should have at least one competency identified, and for most positions it is expected there will be anywhere between 2 and 10 competencies assigned. The CMS system has enough fields to accommodate up to 20 competencies for any position, however, it is expected that there will be few positions that will need to be assigned more than 10 competencies.

- (2) Guidelines for the number of competencies per employee: Individuals are to identify the areas of knowledge that they have acquired through past education or work experience. However, it is not feasible, nor the intent of this system, to capture everything a person may know. Therefore, the employee should limit and select the competencies that best describe the knowledge areas that they have utilize most often in the present, or in the past. At a minimum, these should include the competencies that they are using in their current job position. Additional competencies should reflect only those bodies of knowledge that employees feel are current enough to be usable, with or without some refresher development, to a maximum of 20 competencies per person.
- (3) Rules for Primary Competency: For every job position, one of the required competencies should be designated as a “primary” competency. It should be the one that best describes, or represents, the knowledge that is utilized the most over a given fiscal year. All competencies identified for a job position are considered of equal value. The primary competency is used during the workforce planning process to help simplify forecasting and the data analysis.
- (4) Rules for identifying required competencies for specific position types:
- **Senior Executive Service (SES)** All Senior Executive Positions will automatically be assigned Executive Management as a primary competency. (ref section 4.1.1) They will also automatically be assigned all of the level 2 NASA Leadership Knowledge Domain competencies. (see section 4.2.2 for the complete listing) They should identify any other appropriate technical competencies that directly relate to the knowledge needed for the functional responsibilities of the position. The Senior Executive position is designated by a supervisory code of 2 and either of the following NASA Classification Codes: 67701 or 77001.
 - **Supervisory Positions** All supervisory positions (designated in the Federal Personnel & Payroll System by a supervisory code of 2) will be automatically assigned one of the following Supervisory Competency Clusters below, depending on their NASA Classification Code. The Supervisory Competency Cluster will be automatically designated as the primary competency. In addition, all of the competencies that comprise the cluster will also be automatically added to the job position. Other appropriate technical competencies may be added as additional knowledge requirements for the job position. These additions should be made per the normal business operations of the system and HR policies.
 - **Project Work & Team Management:**
77010, 77060, 77061
 - **Technical Work & Team Management:**
All 605, 700, and 900 series except 77010, 77060, 77061 & (77001 SES)
Also 20101, 24501, 28501, 30107, 30113, 30501, 31502, 35501, 35502
 - **Business Work & Team Management:**
All other positions that do not fall into the first two categories, except for SES (67701 & 77001)
 - **Technicians** should have Engineering and Science Support (11) as the primary competency with other technical competencies as secondary
 - **Administrative Officers** should have Professional Administrative Operations (115) as the primary competency and other competencies as secondary. (*Example: Financial Management, Budgeting Management, etc.*) All positions classified as OPM Series 341 will be automatically assigned this competency as primary by the CMS tool.
 - **Secretary positions** should have Para-Professional Business Operations (165) as the primary competency. All positions classified as OPM Series 303 & 318 will be automatically assigned this competency as primary by the CMS tool.
 - **Student trainees/co-ops** will be tracked and planned for as part of the workforce planning process. Student Trainee positions will be assigned a generic competency as their primary for planning purposes. The Centers can further define the knowledge specialty of the student position by assigning one, or more specific technical competencies as a requirement for the position. The following competency assignments will be made to the student trainee position based on the NCC classification:
 - **Technical Student Trainee Positions**, classified as NCC 340-XX, will be assigned the “Technical Student Trainee” (1101) as their primary competency.

- Clerical Student Trainee Positions, classified as NCC 501-02, will be assigned the “Clerical Student Trainee” (1102) as their primary competency.
- Professional Administrative Student Trainee Positions, classified as NCC 509-10, 509-12, 510-09, 513-02, 515-03, 516-02, 519-02, 551-02, 560-06, 570-03, 570-04, 576-04, 586-01, 591-02, 591-03, and 596-02, will be assigned the “Professional Administrative Student Trainee” (1103) as their primary competency.

Any exceptions to these business rules should be reviewed with Center CMS representatives

- (5) Guidelines for Levels of Proficiency: Proficiency is a measurement of an employee’s demonstrated level of capability utilizing the associated body of knowledge. It categorizes the depth of knowledge within any single competency or subcompetency. Reference the “Proficiency Guideline Table” in Appendix B.

REVISION HISTORY

REVISION	DATE	COMP ID	CHANGE
7a	10/08/2009		Added new category of competencies “Chapter 6 – Developmental Competencies”. Added “Chapter 7 – Competency Models for Professional Occupations”
			See Appendix C for a summary of changes made to this revision.
7	10/22/2008		See Appendix C for a summary of changes made to this revision.
6b	5/7/2007		3 new Level 1 competencies were added. See Appendix C for a summary of changes made to this revision
6a	4/5/2006		.
6	12/7/2005		See Appendix C for a summary of changes made to this revision.
5a	10/8/2005		The Business rules were modified for the Administrative Officers, Secretary positions, and Student Trainees/coops. RCN 06-005
		174	(new) Level1 competency “Student Trainee” was added to the dictionary section 1.4.6 . RCN 06-001.
		1101	(new) Level2 subcompetency “Technical Student Trainee” was added to the dictionary section 1.4.6.1. RCN 06-002.
		1102	(new) Level2 subcompetency “Clerical Student Trainee” was added to the dictionary section 1.4.6.2. RCN 06-003.
		1103	(new) Level2 subcompetency “Professional Administrative Student Trainee” was added to the dictionary section 1.4.6.3. RCN 06-004.
5	10/8/2004		See CMS-DOC-16 Revision 5 Change Catalog Rev 09-30-2004 for a complete history of changes made during this revision.
4b	2/3/2004		NO CHANGES WERE MADE TO COMPETENCIES Preface was added. Index was added Cross Reference Table was added.

NASA Competency Management System

Workforce Competency Dictionary

REVISION	DATE	COMP ID	CHANGE
4a	1/21/2004		NO CHANGES WERE MADE TO COMPETENCIES New Competency Groupings replaced the previous hierarchy.
4	7/21/2003	64	Analytical and Computational Structural Methods has been clarified as a research competency and is applicable to structures discipline
		122	Program/Project Management was modified to separate out knowledge associated with program/project analysis (147).
		126	Physical Security was modified to separate out knowledge associated with export control (144).
		130	Occupational and Environmental Health & Safety was expanded.
		132	Facilities Planning and Operations has been renamed and subdivided into 4 new competencies: <ul style="list-style-type: none"> ▪ Institutional Facilities Planning (145) ▪ Institutional Facilities Operations (146) ▪ Research Facilities Planning (132) ▪ Research Facilities Operations (148)
		138	(new) Nuclear Engineering has been added.
		139	(new) Software Assurance Engineering has been added.
		140	(new) Leadership has been added.
		141	(new) Personal Communication has been added.
		142	(new) Relationship Management has been added.
		143	(new) Fire Protection Engineering has been added.
		144	(new) Export Control has been added.
		145	(new) Institutional Facilities Planning has been added.
		146	(new) Institutional Facilities Operations has been added.
		147	(new) Program/Project Analysis has been added.
		148	(new) Research Facilities Operations has been added.
3			BASELINE – First dictionary approved by the Competency Management System Agency Implementation Team
2			WORKING DRAFT
1	12/12/2002		INITIAL DRAFT

1. Business Knowledge Domain

1.1. Business Operations Competency Suite

1.1.1. Partnership & Business Development (BUSDEV) [116]

Knowledge, capabilities and practices associated with the effective targeting and acquisition of external partnerships and business opportunities, including funding opportunities for projects and programs. Includes an understanding of the Agency's strategic plan, the ability to identify, assess and forecast new business opportunities such as technology transfer, leasing, enhanced use leasing, and develop and use appropriate marketing strategies. Requires knowledge of relevant markets, customer needs in those markets, and an ability to recognize and analyze market trends. Involves development, or assessment, of proposals to win business, and management of existing agreements with external entities such as industry, government, university, and international partnerships. Also includes knowledge of Space Act Agreements, and an ability to facilitate and manage partnerships that support Agency strategies, partner requirements and Space Act provisions. Ability to integrate and work with the appropriate elements of the agency's technical and support communities.

1.1.2. Business IT Systems (BITSYS) [131]

Knowledge, capabilities and practices associated with computer architectures and computer-based information systems related to business operations and mission support. This competency is based on knowledge comprised from one or more of the following interrelated technologies: computer and other hardware, programming languages, commercial operating systems, web or database systems, network hardware and software, IT security and other technologies that pertain to the acquisition, computation, storage, distribution, reporting, and management of information.

1.1.2.1. Information Resources Planning and Evaluation (BITPLAN) [1078]

Knowledge of the principles, methods, and techniques of IT assessment, planning, management, monitoring, and evaluation, such as IT baseline assessment, interagency functional analysis, contingency planning, and disaster recovery.

1.1.2.2. IT Architecture (BITARCH) [1079]

Knowledge of architectural methodologies used in the design and development of information systems, including hardware and software architectures such as network, data center, and end user device architectures; enterprise architecture principles, methods, and tools; information technology strategic planning; and information technology standards. Knowledge of the Federal Enterprise Architecture and principles, methods, and tools utilized to simplify processes and unify work across agencies and within the lines-of-business of the Federal Government. Knowledge of the principles, tools, and techniques used to design, develop, and/or implement Knowledge Management practices at a local or enterprise level.

1.1.2.3. Information Systems Security (BITSECURE) [1081]

Knowledge of policies, methods, tools, and procedures of information systems security planning and management, including security controls and metrics, privacy management procedures, and security risk management, to prevent information systems vulnerabilities, and provide or restore security of information systems and network services. Knowledge of security architecture principles, standards and reference architectures. Knowledge of security

compliance control mechanisms and associated regulations and NASA requirements. Includes the knowledge of the management, principles, methods, and tools for continuity of operations and disaster recovery of information systems.

1.1.2.4. IT System and Requirements Analysis (BITRQMTS) [1140]

Knowledge, capabilities, concepts, and methods of strategic IT systems analysis and requirements analysis for planning and execution, emphasizing proactive techniques to ensure maximum influence on systems acquisition as well as optimum life-cycle management of acquisition and legacy systems. Capabilities include planning, developing, implementing, and sustaining the business and customer relationship activities necessary to satisfy IT system requirements while minimizing life-cycle costs.

1.1.2.5. IT Sourcing and Asset Management (BITSOURCE) [1141]

Knowledge, capabilities, concepts, and methods of strategic IT sourcing and asset management for planning and execution, emphasizing proactive techniques to ensure maximum influence on systems acquisition as well as optimum life-cycle management of acquisition and legacy systems. Knowledge of portfolio management principles and practices, lifecycle IT systems management, and hardware and software licensing agreements.

1.1.2.6. IT Innovation Management (BITINNOVATE) [1142]

Knowledge of advanced and emerging information technologies, such as virtual reality, intelligent systems, multimedia, and emerging Web-based technologies. Knowledge of principles, methods, tools and techniques for conducting advanced information technology pilot projects, research, evaluation, and predictive analysis.

1.1.2.7. IT Service Management and Delivery Operations (BITSERVICE) [1143]

Knowledge of principles, policies, methods and tools for planning and delivery of end user support services for IT systems and applications, including installation, configuration, troubleshooting, customer assistance, and training. Includes knowledge of methods and tools for IT systems diagnosis, trend analysis, and problem tracking and resolution..

1.1.2.8. Information Management (BITINFOMMT) [1144]

Knowledge of policies and principles related to the management of information, including information quality, accessibility, security, confidentiality, privacy, and integrity. Knowledge of relevant Federal laws and regulations such as Privacy Act, Section 508, and the Information Quality Act..

1.1.3. Business Management (BUSMMT) [113]

Knowledge of principles and practices related to managing the internal and external operations of a business unit, such as a Center, to accomplish mission objectives and goals efficiently. Includes ability to integrate performance goals with budget and financial resources as well as the ability to achieve customer satisfaction, develop strong relationships with other NASA and external entities, and adhere to agencywide programs, policies, and procedures. Understanding of Agency and federal government financial, budget and performance operations and processes, and how to apply these processes to optimize operational and investment decisions.

1.1.4. Commercial Technology (COMTEC) [117]

Knowledge and abilities associated with transferring current and future Agency technology to external entities in order to meet broad Agency vision and missions, and extend the lifecycle and broaden the usefulness of Agency technologies.

Involves expertise in business practices pertaining to intellectual property, patents, licenses and partnerships as well as general business knowledge for assessing potential partners. Includes broad understanding of Agency technologies and programs, as well as familiarity with external entities and markets.

1.1.5. Education Programs and Technologies (EDTECH) [137]

Knowledge, capabilities and practices associated with the research and application of education programs, standards, requirements, activities and services relevant to the fields and disciplines of science, technology, engineering, and mathematics (STEM) within the contexts of pre-college, higher education, and non-traditional learning. Includes knowledge of education concepts and principles, curriculum development, infrastructure, audiences, instructional technologies and distance learning tools, and trends in order for NASA to appropriately influence and contribute to national and state education initiatives and requirements through the use of NASA's unique assets. Includes knowledge of NASA Enterprise and Center-based research and technology needs, and ability to align education activities and programs with these needs. Includes knowledge of demographic and geographic dynamics that influence the educational effectiveness and success within the various student and educator communities.

1.1.6. Export Control (EXPORT) [144]

Knowledge, capabilities, and practices associated with complying with federal laws controlling the export of items and technical data. This includes the formulation and implementation of export control policy, plans, and procedures that ensure compliance with federal law. The primary focus of export control is to ensure compliance through programs, education of the workforce, and addressing unique situations in the aerospace environment.

1.1.7. Governmental Affairs (GOVAF) [136]

Knowledge of NASA-related legislation, the legislative process and public affairs as it pertains to NASA. Includes the ability to monitor legislation that is of interest to NASA, monitor NASA-related hearings and markups scheduled before the House and Senate committees and subcommittees that have oversight over NASA, to especially include Authorization and Appropriations subcommittees. Ability to help manage NASA press releases of Congressional interest and identify key members and issues of importance to them. Broad knowledge of NASA programs and specific knowledge of local center programs.

1.1.8. Inspection, Investigation and Compliance (INSCOMP) [127]

Knowledge of how to provide objective evaluation of Agency standards and operation through use of inspection and investigation techniques and compliance audits. Understanding of how to assess risk, evaluate evidence, design and conduct inquiries such as inspections and investigations, and make recommendations to prevent, detect or solve crime, fraud, waste and abuse and ensure efficient Agency operations. Involves understanding of how to communicate information to constituents, including Agency leadership and management, employees, and Congress.

1.1.9. Legal Assistance (LEGALSUP) [176]

Other knowledge of legal research and writing, litigation case management, and providing professional administrative and technical legal support, not otherwise categorized.

1.1.9.1. Paralegal (PARALEGAL) [1082]

Knowledge of legal research and writing, litigation case management, and providing professional administrative and technical legal support. Possesses paralegal certificate or equivalent

1.1.9.2. Patent Agent (PATENTAGT) [1114]

Knowledge of intellectual property matters, patents, copyrights, data rights, trademarks, and commercialization of technology. Must be admitted to the practice before U.S. Patent Office, but not necessarily licensed to practice law.

1.1.10. Legal Application Practice (LEGALAPP) [125]

Member in good standing of the bar of either a Federal court or the highest court of any state in the United States or the District of Columbia. Knowledge, capabilities and practices associated with representation, counseling, advising, researching, performing, and / or supervising professional legal work in the administration of applicable statutes, regulations, Executive Orders, rules, and case law. This includes knowledge of topics such as, but not limited to civil and administrative law, procurement, claims, , fiscal matters, personnel matters, environmental matters, FOIA, Congressional inquiries, ethics, intellectual property and data rights, litigation, and appeals.

1.1.10.1. Intellectual Property Law (INTPROPLAW) [1083]

Speciaized knowledge of matter related to intellectual property, including but not limited to patents, copyrights, data rights, trademarks, and commercialization of technology. Be in good standing to practice before the United States Patent and Trademark Office.

1.1.10.2. General Law (GENERALLAW) [1084]

. Speciaized knowledge of matters related to civil and administrative law, including but not limited to fiscal and appropriations law, ethics, FOIA, torts, privacy issues, export control, immigration and foreign visitors, and litigation and appeals.

1.1.10.3. Contracts Law (CONTRCTLAW) [1085]

Speciaized knowledge of matters related to procurement, including but not limited to contracts, grants, cooperative agreements, Space Act agreements, source selections, claims, protests, and litigation and appeals related to procurement matters .

1.1.10.4. Personnel/EEO Law (PERSONLAW) [1086]

Speciaized knowledge of matters related to employee and personnel issues, including but not limited to employee discipline and performance matters, MSPB, labor unions and collective bargaining, EEO, ADR, and litigation and appeals related to employment and personnel matters.

1.1.10.5. Environmental/Real Property Law (ENVLAW) [1087]

Speciaized knowledge of matters related to environmental matters, including but not limited to of local, state and Federal environmental laws, regulations, Executive Orders, and administrative procedures, NEPA, permits, response or corrective actions, pollution prevention, and litigation and appeals related to environmental matters.

1.1.10.6. International Law (INTLLAW) [1112]

Knowledge of public international law, space law, international agreement drafting, conclusion, procedure and interpretation, international jurisprudence, Space Act Agreements, inter-agency procededures concerning international agreements (C-175), negotiation skills and general knowledge concerning all other areas of law (e.g., IP, ethics, contracts, environmental).

1.1.10.7. Commercial Law (COMMLAW) [1113]

Knowledge of negotiating, drafting, and interpreting Space Act Agreements with domestic and foreign entities; compliance with export-import control regulations; and partnering arrangements with commercial organizations. Knowledge related to intellectual property law and commercialization of NASA activities, in addition to policy, legislative drafting, negotiating and drafting agreements, and providing legal advice and reviews.

1.1.11. Public Communications & Outreach (PUBLICOMM) [135]

Knowledge, capabilities and practices associated with the assessment, development and execution of public communication and outreach efforts. Knowledge of effective public relations and presentation techniques for representing and expressing the views, work operations and policies of NASA including liaising with and presenting information to a variety of external audiences. Effectively advocates for the Agency through communication of the organization's expertise and contributions, and assessing the effectiveness of past or ongoing efforts. Apply principles and practices of domestic and international customs, regulations and details to ceremonies or other interaction with distinguished visitors or in public forums. Manage Agency knowledge so it can be accessed where and when needed for communication purposes inside and outside the Agency. This includes public writing and speaking, information collection and dissemination, news broadcasting and writing, media relations, exhibit design, story development, visitor and guest programs, protocols, and concessionaire management.

1.1.12. International Program Development (INTLPGMDEV) [157]

This competency refers to the knowledge and capabilities associated with establishing international programs/agreements through international negotiations, drafting international agreements that comply with U.S. laws and regulations, arranging negotiation meetings, understanding the protocol issues involved in meetings, signing ceremonies, meetings between heads of agencies and NASA, exchange of gifts, liaison with Department of State and other U.S. Agencies and Departments. This may involve both reimbursable and non-reimbursable agreements.

1.1.13. Policy Management (POLICYMGMT) [169]

Knowledge of NASA relationships to headquarters, Centers, component facilities, partnerships and other government agencies, including international governments, in order to effectively integrate services consistent with broad strategies and objectives. Requires the capability to research and apply government-wide laws and Agency operating principles, regulations, and policies associated with organizational and business functions such as financial, human resources, legal, information technology, security, communications, inspection, compliance, and health and safety. Utilizes a wide variety of resources and tools to develop, maintain, monitor, enforce and provide oversight of NASA management requirements.

1.2. Financial Operations Competency Suite

1.2.1. Budgeting Management (BUDGETMMT) [119]

Knowledge of how to apply management knowledge, principles and practices to obtain, utilize, manage financial resources in the workplace to meet program, project or business requirements. Involves maintaining available resources, making resource decisions based on need and availability, and developing and implementing strategies to make rational and well thought-out decisions related to organizational resources. Includes the ability to provide guidance, formulate a budget plan, defend a budget plan, assess budget performance, advocate budget and alternative scenarios and execute a

budget plan. Requires knowledge of policies and practices related to Federal, Agency and Installation accounting, and internal business information systems.

1.2.2. Cost Estimation and Analysis (COSTEST) [121]

This competency refers to the knowledge, capabilities, and practices associated with the determination, estimation, and analysis of costs. It encompasses analytical techniques required to develop and assess estimates for hardware/software acquisition; design, integration and test, production, operations and support costs (e.g., life-cycle costs) of programs, projects, systems, and resources. Estimating and cost analysis methodologies used include engineering, parametric, grass roots, analogy, cost performance analysis, schedule analysis, and statistical risk analysis. Knowledge and skills required include Work Breakdown Structure (WBS) development, data collection, cost estimating relationship development and documentation, application of cost models, and evaluation of cost realism in proposals.

1.2.3. Financial Management (FINMMT) [118]

Knowledge of how to apply financial management skills, principles and practices, generally accepted accounting principles (GAAP), and the standards, policies and practices related to Federal, Agency and Installation accounting and financial management to obtain, utilize, manage and account for resources in the workplace. Ability to use accounting related tools and techniques, perform financial data analysis, compile and/or perform transactions, review related outputs, and identify problems and prepare standard documentation. Ability to develop and implement strategies to capture, record, maintain and allocate organizational resources rationally and effectively.

1.2.4. Internal Control / Audit (INTAUD) [120]

Knowledge of how to evaluate control systems for financial, administrative, program, and operational activities to provide reasonable assurances that obligations, costs and disbursements comply with applicable regulations and laws, that property is funded, and assets are safeguarded; and that revenues and expenditures applicable to operations are properly recorded and accounted for. Involves ability to conduct surveys, studies and other investigations for management operations or related processes to assess and report adequacy, validity and compliance/non-compliance to requirements. Ability to communicate derived audit assessment and recommend, establish, modify and/or implement internal controls to mitigate findings.

1.3. Institutional Operations & Support Competency Suite

1.3.1. Institutional Environmental Engineering & Management (ENVENGMT) [133]

Uses knowledge of environmental engineering, environmental law, chemistry, biology, geology and hydrogeology to maintain a proactive stance regarding environmental stewardship, including protection and restoration of environmental resources such as ground water, surface water, soils, sediments, air, and natural, cultural and historic resources. Plans and assesses compliance with Federal, State, and local statutory and regulatory requirements, Executive Orders, and directives. Implements proactive programs such as recycling, pollution prevention, affirmative procurement and energy management, and remediation activities under RCRA and CERCLA requirements.

1.3.1.1. Institutional Environmental Planning/NEPA (ENVPLAN) [1088]

Uses knowledge of environmental engineering, environmental law, economics and the physical sciences to fully consider the possible environmental effects, along with technical, economic, and other factors, in the earliest

planning of proposed NASA Programs, Projects, and related activities. Implements the requirements of the National Environmental Policy Act (NEPA) including developing and reviewing NEPA documentation including Environmental Assessments, Environmental Impact Statements, Findings of No Significant Impact, and Records of Decision. Coordinates public meetings to solicit input on major Agency actions.

1.3.1.2. Institutional Environmental Remediation (ENVREMEDI) [1089]

Uses knowledge of environmental engineering, chemistry, biology, geology and hydrogeology to identify, investigate, and cleanup contaminated hazardous waste sites in compliance with Resource Conservation and Recovery Act (RCRA) and Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) requirements. Performs remediation contract management duties including evaluation of contractor performance and financial and schedule planning and tracking. Negotiates agreements with Federal, State, and local regulators. Manages the schedule of scientific/engineering, contractual, management, and informational documents, including preparation of Records of Decisions (RODs), administrative orders, and consent decrees. Performs necessary community relations activities.

1.3.2. Fire Protection Engineering (FIREPROT) [143]

Knowledge, capabilities and practices associated fire prevention-related tools and their application to systems for minimizing the occurrence or effects of fire. Maintains comprehensive knowledge of applicable NFPA, OSHA, NASA, aerospace and/or prevention industry trends, standards and develops policies for fire prevention. Demonstrates a comprehensive capability to review and assess complex technical documents for their impact on fire prevention work, NASA facilities and programs. Maintains a comprehensive knowledge of Life Safety Systems. Demonstrates technical capability to provide mitigation strategies for fire protection when requirements cannot be met.

1.3.3. Master Planning (MASTERPLAN) [167]

Knowledge of strategic and long-term planning for operations, research or development activities at the Center level. Knowledge required to develop functional and overall Center requirements including fit of specific facility needs and requirements as well as workflow and long-term scheduling. Includes knowledge required to coordinate and incorporate the necessary facilities and other building and infrastructure to satisfy all functional, institutional needs to meet mission requirements. Specialized knowledge of transportation modeling as well as broad aspects of community interface for emergency services and other requirements of large complex industrial installations.

1.3.4. Institutional Logistics, Supply and Transportation (LOGSUPTRAN) [134]

Knowledge of principles, practices, equipment and tools in the areas of Logistics, Supply and Transportation. Understanding of how to manage and optimize equipment, supplies and transportation systems to provide an infrastructure that enables the agency to operate effectively. Includes management of specifications, acquisition, certification, storage, delivery, lifecycle support, distribution, and disposal of supplies, hardware, materials, equipment, and property (except real estate) and the operation and maintenance of transportation and other equipment used to move materials or passengers. Also includes management of inventories, including government property, equipment and materials provided to employees and contractors, so that the property is accurately accounted for, reported against and disposed of at the end of its useful life. Requires understanding of government regulations regarding property management and disposal, and related contracting terminology and requirements.

1.3.5. Security & Program Protection (SECURITY) [126]

Knowledge, capabilities and practices associated with providing security to protect facilities, personnel and programs. Ability to develop, implement and manage processes and programs involving law enforcement, counter-intelligence and counter-terrorism investigations, and security support programs including physical, information, personnel and industrial security.

1.3.5.1. Physical Security (SECPHYSCL) [1072]

Knowledge, capabilities and practices associated with the protection of property and individuals from threats or adversarial influences. Abilities deal primarily with assessing risk, conducting surveys and implementing physical counter-measures designed to protect personnel from potential threats; prevent unauthorized access to equipment, facilities, material, and documents; and safeguard against espionage, sabotage, damage, and theft.

1.3.5.2. Counterintelligence/Counterterrorism Analysis, Investigation and Liaison (SECOUNTER) [1073]

Knowledge, capabilities and practices associated with receipt, analysis, dissemination and investigation of information for the purpose of detecting, deterring and neutralizing acts involving espionage, intelligence activities, sabotage and/or terrorist activities conducted for or on behalf of foreign powers, organizations or persons.

1.3.5.3. Information Security (SECINFO) [1074]

Knowledge, capabilities and practices associated with the protection of national classified information and sensitive but unclassified (SBU) information including; classification, declassification, and protection of classified national defense information originated or controlled by Federal agencies in accordance with Executive Order 12958, April 17, 1995, "Classified National Security Information,"

1.3.5.4. National Security Systems (SECNATION) [1075]

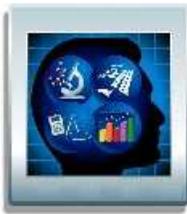

Knowledge, capabilities and practices associated with researching and implementing national security systems used for transmitting national security information, including classified and sensitive unclassified information technology systems and programs involving secure voice, data, video, and facsimile to include ground-to-ground, space-to-space, and ground-to-space communications assets.

1.3.5.5. Personnel Security (SECPERSON) [1076]

Knowledge and ability to request background investigations appropriate to position sensitivity and to review and evaluate completed background investigations for the purpose of assessing loyalty, reliability, suitability, and trustworthiness of applicants, employees, and others to work for the U.S. Government, on U.S. Government contracts, and/or will have access to classified national security information and material.

1.3.5.6. Industrial Security (SECINDUST) [1077]

This competency refers to the knowledge and ability to perform personnel, physical, and information security functions related to contractors and contract facilities, in accordance with the National Industrial Security Program (NISP), established by Executive Order 12829; the National Industrial Security Program Operating Manual (NISPOM), NIPSOM Supplement and Executive Order 12958, "Classified National Security Information. Includes ensuring that private industry and colleges/universities, while performing on government contracts or conducting research and development, properly protect classified assets in their possession. Capabilities include conducting site security reviews and establishing criteria for contractors and subcontractors covering such matters as foreign ownership or influence; classification and clearance levels required for contract performance; product classification; and access to communication security, intelligence or international organization information.

1.3.6. Emergency Management (EMERGMT) [151]

Knowledge, capabilities, and practices of Comprehensive Emergency Management are associated with an integrated approach to the management of emergency programs and activities for all four emergency phases (mitigation, preparedness, response, and recovery), for all types of emergencies and disasters (natural, man-made, and attack), and for all NASA sites and centers, to include special National Level requests. Applies expert knowledge of the National Incident Management System, the National Response Framework, and Homeland Security Presidential Directives and other federal policies to enable effective emergency programs at the national, state, or local level as appropriate. Ability to lead, coordinate, manage and direct the development and implementation of NASA's and Federal emergency management policies, plans, and procedures for emergency response conditions, contingencies, continuity of operations, occupant emergency plans, and NASA's interagency support functions in a full spectrum of emergencies. This competency includes the commitment to produce sound policy through requirements development that may affect lives, property, and operations in the event of unknown scenarios. Demonstrates the ability to: develop standards and specifications for new data analysis and data collection processes related to emergency preparedness; serve as an Agency, national level and industry-wide resource and has an established network to facilitate the acquisition of other resources and information; develop and/or modify safety procedures and requirements for related work and organization; maintain expert knowledge of applicable NASA, federal, aerospace and/or industry emergency preparedness trends, standards and policies; provide design concepts, risk management, trouble-shooting and trade-off analysis; technical expertise to represent Agency-wide, federal, industry and academic working groups, boards and panes; manage and provide comprehensive interpretation and equivalencies for all phases of emergency management; exhibit comprehensive knowledge of FEMA, OSHA and NASA standards pertaining to emergency management; represents agency in determining levels of coordination with intergovernmental departments, state and local agencies; evaluate agency exercise design criteria for emergency response; conduct risk assessments.

1.3.7. Occupational and Environmental Health (OCHEALTH) [130]

Knowledge, capabilities, and practice associated with NASA, Federal, and State OSHA health and safety regulations, policies and procedures used to develop and implement mishap and environmental health prevention practices and measures in all NASA work places. These knowledge areas include safety of personnel and equipment during launch vehicle processing, normal and industrial and laboratory operations, special high hazard tests and operations, aviation and space operations, use and handling of materials and chemicals, and design, construction, and use of facilities. Capabilities include ability to develop and analyze policy, manage, and assess the effectiveness of health programs and practices, which are designed to prevent injury to personnel and loss of NASA property in the industrial work environment, and promote the health and well being of employees.

1.3.7.1. Occupational Medicine (OCCMED) [1066]

Professional skills and knowledge to apply occupational health related requirements to protect and maintain workers' physical and mental health. Knowledge to apply and initiate preventive health and wellness measures to reduce work-related illnesses and injuries. Knowledge and experience to manage implement and evaluate occupational medicine program areas. This includes clinical case management, health surveillance, and emergency medical response.

1.3.7.2. Industrial Hygiene (OCCHYGIENE) [1067]

Professional knowledge and skills to develop and implement preventive measures regarding all work-related exposures, injuries, and illnesses. Knowledge to coordinate, implement, manage, and assess the impact and effectiveness of related programs, practices and policies across the Agency, designed to protect the health of employees. Knowledge to provide advice to Agency top management concerning the impact that new regulations and technologies will have on the health of employees. Knowledge to provide professional symposia, workshops, and coordinate the development of related training programs for Agency-wide application.

1.3.7.3. Health Physics (OCCPHYSICS) [1068]

Knowledge of Federal and State Health Physics (ionizing and non-ionizing radiation) regulations, policies, and procedures, to develop and implement preventive measures regarding all work-related exposures, injuries and illnesses. Knowledge to develop, coordinate, implement, manage, and assess the effectiveness of related programs, practices and policies across the Agency, designed to protect the health of employees. Knowledge and skills to evaluate the application of new technologies to Agency related issues, and the impact of new laws and regulations and provides advice to Agency top management. Knowledge to provide professional symposia, workshops, and develop related training programs for Agency-wide application.

1.3.7.4. Employee Assistance (OCCASSIST) [1069]

Professional knowledge and skills to improve the mental health and well being of employees. Knowledge of regulations and programs to coordinate, implement, manage and assess the effectiveness of related employee assistance programs, practices and policies, including substance abuse prevention and treatment in support of drug-free Federal workplace program. Knowledge to implement programs and training for all mental health concerns for employees and their immediate families. This includes critical incident stress or other traumatic events in the workplace, promotion of an emotionally healthy workforce, and assessment of regulations that potentially impact the workplace.

1.3.8. Facilities Engineering and Management (FACENG) [112]

Knowledge of facilities engineering , facility evaluation, cost, schedules and formulation of performance requirements and alternative analysis/scenarios for key facilities. General knowledge of architectural, civil, mechanical and electrical engineering disciplines. Knowledge of project management and control including life-cycle costs, engineering economics, and project planning and evaluation including scope, cost and schedule and program controls including earned value management or other measure for facility project controls. Also requires knowledge of construction contracting and contractor oversight and contracts management.

1.3.8.1. Facility Civil Engineering (FACIVENG) [1090]

Knowledge of building and foundation design and construction, concrete and steel design and construction as well as design and construction of roads, utilities, and other civil projects for aerospace facility programs. Requires understanding of energy management and sustainability standards for sustainable design. Also requires knowledge of construction contracting and contractor oversight and contracts management.

1.3.8.2. Facility Mechanical Engineering (FACMECHENG) [1091]

Knowledge of planning, designing, developing, testing, or evaluating mechanical, electromechanical, pneumatic, hydraulic, fluid or structural equipment and systems for aerospace facility programs. May include specialization in Heating Ventilation and Air Conditioning (HVAC), piping and elevators. etc. Also requires knowledge of construction contracting and contractor oversight and contracts management.

1.3.8.3. Facility Electrical Engineering (FACELECENG) [1092]

Knowledge of planning, designing, developing, testing, or evaluating electrical components, electrical installation and inspection for aerospace facility programs. Knowledge of electrical codes and standards, and testing of complex electrical or electronic systems including sources, loads, power management and distribution, communications and controls. Also requires knowledge of construction contracting and contractor oversight and contracts management.

1.3.8.4. Construction Management (FACONSTMMT) [1096]

Knowledge of the materials, methods, systems, and the tools used to construct facilities and other real property infrastructure.

1.3.8.5. Real Property Management (FACPROPTY) [1097]

Knowledge of requirements and processes to manage real property including buildings, other infrastructure, land, and leases and other interests in property and real estate for industrial and aerospace operations. Knowledge of real estate principles, practices and law as they apply to the management, leasing or acquisition of real estate. Knowledge of records management for financial accounting and value maintenance, including development of files and records to serve as legal documentation of ownership and material value. Knowledge of facility utilization include space planning and tracking for institutional charges as well as for space management and utilization reporting at the agency as well as at the federal level.

1.3.8.6. Facilities Operations and Maintenance (FACOPSMAIN) [1098]

Knowledge of operation and maintenance of office, operations and/or research facilities, and associated systems and equipment. Includes but is not limited to: knowledge required to develop and manage a comprehensive program of facilities management services, such as test planning and development, development of operational plans and procedures, data acquisition and analysis, test scheduling, resource planning, development of facility capability enhancements, reliability centered maintenance, energy conservation, system health monitoring, minor facility modification and repair, etc., to operate, sustain and optimize facilities and equipment. Includes the ability to effectively integrate these services to be consistent with the strategies and program goals of the organization.

1.3.9. Institutional Aircraft Operations (AIROPS) [152]

Knowledge of aircraft operations, maintenance, acquisition, airworthiness and aviation safety principles for technologically complex aircraft programs and their associated systems and facilities. Knowledge of how to develop aircraft requirements and the associated costs and scheduling to satisfy functional and regulatory requirements. Ability to develop and manage a comprehensive aviation program to sustain and optimize institutional and research and development (R&D) requirements consistent with standards, codes and regulations. Effectively integrate these aircraft services to be consistent with the broader objectives, strategies, and program goals of the organization.

1.3.10. Research, Development or Flight Facility Planning (FACLTYPPLAN) [168]

Knowledge of strategic and long-term planning for research, development or flight facilities and related equipment required to support operations for current and future program needs. Knowledge required to develop functional and facility requirements and the associated costs and scheduling. Includes knowledge required to coordinate and incorporate the necessary architectural engineering to satisfy all functional, institutional and regulatory requirements. Specialized knowledge of engineering and technology competencies to address specific high energy/ high risk facility systems including but not limited to: high temperature systems, high pressure systems, cryogenic systems, exotic gases, control systems, data acquisition systems, energy transfer systems, laboratory workspace planning, communication infrastructure. Knowledge of project management and control including life-cycle costs, engineering economics, and project planning and evaluation including scope, cost and schedule and program controls including earned value management or other measure for project controls. Includes abilities to devise and implement policies and procedures regarding risk/hazard mitigation and safety assurance.

1.3.11. Workplace Safety (WORKSAFETY) [150]

Knowledge, capabilities, and practice associated with NASA, Federal (29 CFR 1960), and State OSHA health and safety regulations, policies and procedures used to develop and implement mishap prevention practices and measures in all NASA work places. These knowledge areas include safety of personnel and equipment during launch vehicle and payload processing, range operations, transportation, handling and industrial processes and laboratory operations, special high

hazard tests and operations, develops explosives safety programs for pyrotechnics, and propellant operations, explosives and propellant coting, aviation and space operations, use and handling of exotic materials and chemicals, and design, construction, and use of facilities. Develops agency fire protection policy to assure a safe and healthful workplace. Capabilities include ability to develop, assess and analyze workplace mishap prevention policy, manage, and assess the effectiveness of safety programs and practices, which are designed to prevent injury to personnel and loss of NASA property in all work environments on land, sea, air or space, and promote the safety of all employees. This function will also assure the proper investigation, recording, and corrective action documentation of all mishaps within the agency. At the National Level assures interagency coordination with all concerned departments and agencies chartered with safety and health policy development, program execution and evaluation.

1.4. Workforce Operations & Support Competency Suite

1.4.1. Diversity Management (DIVERSEMMT) [158]

Knowledge, capabilities and practices associated with the application of diversity management including developing, implementing, evaluating, and monitoring the Agency's Diversity Strategic Implementation Plan and related programs as well as internal diversity communications and external diversity relations, diverse employee network groups, diversity training initiatives, diversity councils, and mentoring initiatives. Works in partnership with the Center(s) leadership and Diversity Council(s) to optimize and support efforts to acquire and sustain a vital effective workforce, to capitalize on the strengths of a diverse workforce to better perform the Center's mission through teamwork and innovation, and to build an organizational climate in which employees respect, appreciate, and value individual differences as catalysts for creativity and productivity..

1.4.2. Human Capital Management (HUMCAPMMT) [128]

Apply knowledge and practices of the full range of personnel/human resource functions, such as classification, workforce planning & analysis, employee and labor relations, retirement, benefits, disciplinary actions, recruitment, selection, training, employee development, promotion regulations and procedures, compensation, and personnel information systems. Provide guidance and leadership in the motivation, performance measurement and overall management of the workforce including the design, delivery, implementation and evaluation of programs and processes. Includes understanding of organizational mission, strategy and business objectives as well as various rules, regulations and culture on people and their work.

1.4.2.1. Classification (HCMCLASS) [1115]

Knowledge of classification concepts, principles, and practices related to structuring organizations and positions and determining the appropriate pay system, occupational grouping, title, and pay level of positions..

1.4.2.2. Compensation (HCMCOMP) [1116]

Knowledge of compensation concepts, principles, and practices, including pay and leave administration and compensation flexibilities..

1.4.2.3. Employee Benefits (HCMEMPBENF) [1117]

Knowledge of HR concepts, principles, and practices related to retirement, insurance, injury compensation, and other employee benefits programs..

1.4.2.4. Employee Development (HCMEMPDEV) [1118]

Knowledge of employee development concepts, principles, and practices related to planning, evaluating, and administering training, organizational development, and career development initiatives.

1.4.2.5. Employee Relations (HCMEMPREL) [1119]

Knowledge of laws, rules, regulations, case law, principles, and practices related to employee conduct, performance, and dispute resolution.

1.4.2.6. Labor Relations (HCMLABOR) [1120]

Knowledge of laws, rules, regulations, case law, principles, and practices related to negotiating and administering labor agreements.

1.4.2.7. Performance Management (HCMPERFMGT) [1121]

Knowledge of performance management concepts, principles, and practices related to planning, monitoring, rating, and rewarding employee performance.

1.4.2.8. Recruitment/Placement (HCMRECRUIT) [1122]

Knowledge of HR concepts, principles, and practices related to identifying, attracting, and selecting individuals and placing them into positions to address changing organizational needs.

1.4.2.9. Workforce Planning (HCMWORKPLN) [1123]

Knowledge of HR concepts, principles, and practices related to determining workload projections and current and future competency gaps to align human capital with organizational goals.

1.4.3. Equal Opportunity Management (EEOMMT) [129]

Knowledge, capabilities, and practices associated with formulating, planning, implementing, managing, tracking and evaluating equal employment opportunity initiatives and programs. Includes the ability to fully integrate EO into all aspects of NASA's mission as core values, to ensure a balanced and consistent implementation of statutory and administrative mandates such as maintaining an efficient and timely complaints processing program, an effective alternative dispute resolution program, and a comprehensive federally assisted and conducted non-discrimination program. Knowledge, capabilities and practices associated with creating an environment where all persons associated with NASA are treated fairly and without any form of unlawful discrimination in any agency program or activity. Includes the conceptualization, delivery and management of equal employment opportunity systems that meet NASA and Federal goals and objectives to eliminate discrimination and influence change in programs, practices and attitudes that are considered barriers to equal opportunity. Advisor/advocate role to agency officials to influence change and ensure compliance with relevant federal law, rules and regulations.

1.4.4. Professional Administrative Operations (PROFADMOPS) [115]

Knowledge, capabilities and practices associated with the support of administrative and management activities to facilitate organizational and mission goals and objectives. This competency requires knowledge of the appropriate rules, regulations, processes and associated systems within various enabling functions which may include human resources management, resource management, employee support services, documentation, procurement and financial management.

1.4.5. Para-Professional Business Operations (PARABUSOPS) [165]

The knowledge and capabilities associated with administrative, clerical and management support to a manager and/or organization to facilitate the mission, goals and customer satisfaction. This competency requires knowledge of policies,

procedures and tools to implement operations within a business environment such as scheduling of meetings, office communication and document generation with the organization.

1.4.6. Student Trainee (STUDENT) [174]

This is a training and development competency for employees who are classified as Student Trainees. It is a generic competency that is intended to be used to help simplify the workforce planning process so that students will be correctly identified and planned for during the workforce competency needs assessment. Reference the Business Rules section in this document for further clarification.

1.4.6.1. Technical Student Trainee (STUTECH) [1101]

This is a training and development competency for employees who are classified as Technical Student Trainees.

1.4.6.2. Clerical Student Trainee (STUCLERICAL) [1102]

This is a training and development competency for employees who are classified as Clerical Student Trainees.

1.4.6.3. Professional Administrative Student Trainee (STUPROFADM) [1103]

This is a training and development competency for employees who are classified as Professional Administrative Student Trainees.

1.5. Acquisition Community Competency Suite

1.5.1. Contracting Officer Technical Representative (COTR) Support (COTR) [180]

Knowledge of federal acquisition system to support a Contracting Officer (CO) acquisition planning, contract formation, and contract administration. This knowledge includes conducting market research, defining requirements and evaluation factors, performing a technical analysis of proposals, and monitoring the contractor's performance..

1.5.1.1. Procurement Planning and Contract Formation (COTRSUB1) [1138]

Knowledge of the steps required to plan and implement a strategy to ensure that required supplies or services are available when needed to meet mission requirements. Ability to conduct, collect, and analyze market information to identify possible sources and acquisition methods. Ability to define requirements and develop offer evaluation factors. Ability to evaluate contractor proposals against the evaluation factors, justify and document findings..

1.5.1.2. Contract Management (COTRSUB2) [1139]

Ability to monitor contract technical, cost, and schedule performance and recommend necessary action to the CO. Ability to apply performance metrics to evaluate actual performance against goals..

1.5.2. Acquisition and Contract Management (CONMMT) [124]

Knowledge, capabilities and practices associated with each phase of the acquisition and contract management lifecycle including requirement analysis, market research, acquisition planning and strategy, solicitation, proposal evaluation, negotiation, determination of price reasonableness, selection, contract management, and performance assessment. Requires understanding of applicable public laws, executive orders, Federal regulations, Agency requirements, policies, and initiatives. Requires knowledge of contracts to review products and services to determine if they are in compliance with contract terms and conditions. Includes ability to assess technical requirements needed to support program and project implementation and provide guidance and direction to contractors to ensure delivery and quality of services and

products. Ability to use contract or acquisition instruments and surveillance systems as necessary to ensure contract or acquisition requirements are being met throughout the life of the contract.

1.5.2.1. Acquisition Planning (ACQPLAN) [1093]

Knowledge of contract regulations and government contract vehicles, and ability to form contracts through source selection planning, identifying solicitation terms and conditions, and identifying and selecting techniques for determining price reasonableness. Also includes ability to recognize factors to be considered when evaluating and providing government financing, conducting price analyses, negotiating, identifying actions to resolve protests, and contract awarding.

1.5.2.2. Contract Formation (CONFORMAT) [1094]

Knowledge of contract regulations and government contract vehicles, and ability to form contracts through source selection planning, identifying solicitation terms and conditions, and identifying and selecting techniques for determining price reasonableness. Also includes ability to recognize factors to be considered when evaluating and providing government financing, conducting price analyses, negotiating, identifying actions to resolve protests, and contract awarding.

1.5.2.3. Contract Management and Performance Assessment (CONPERFORM) [1095]

Knowledge and capabilities associated with managing contracts and evaluating a contractor's performance, including identifying and evaluating commercial and noncommercial financing arrangements, determining the appropriate actions necessary to ensure customer satisfaction, identifying and selecting the appropriate course of action for resolving a contractor dispute, and identifying and implementing contract close-out procedures.

2. Engineering & Technology Knowledge Domain

2.1. Engineering of Systems Competency Suite

2.1.1. Design and Development Engineering (DESDEVENG) [8]

Knowledge, capabilities and practices associated with all aspects of the technical design and development process including the development of flight hardware, payloads, technology projects fabrication processes and techniques, concurrent engineering, production assessment, and process verification as applied to aerospace vehicles and systems used in atmospheric and space environments. Includes ability to create models and prototypes, particularly in a laboratory setting, based on research oriented plans and schematics and capability to design the system for safe and reliable development, integration and manufacturability.

2.1.1.1. Structural Design and Development Engineering (DDESTRUCT) [1028]

Knowledge, capability and practices associated with all aspects of the technical structural design and development by using and modifying advanced analytical and computational methods to design, develop, test and research the characteristics and performance of structures. Includes the development of structural math models for and comprehensive assessment of air, space and ground structures, the analysis of the models to determine structural response to multiple external and internal environmental conditions, and analysis of flight and test data for structural

systems. Includes broad knowledge of structures disciplines including structural dynamics, structural mechanics, structural acoustics, mechanisms, electro-mechanical devices, aeroelasticity, impact, damage tolerance and structural life prediction. Also involves research into measurement, instrument and test systems to assess structural characteristics and risks, and ensure system integration.

2.1.1.2. Electrical Design and Development Engineering (DDELEC) [1029]

Knowledge, capability and practices associated with all aspects of the technical electrical design and development process of electrical systems and components for air, space and ground systems and instruments. Includes knowledge of electrical integration such as electrical / electronic design requirements definition, subsystem and circuit analysis, test procedure development, and safety analysis. Includes broad knowledge EEE parts, electronic packaging design and tools, reliability and environmental effects, power generation, distribution, storage and conditioning systems.

2.1.1.3. Propulsion Design and Development Engineering (DDEPROP) [1030]

Knowledge, capabilities and practices associated with the detailed mechanical design of propulsion components, subsystems and systems. Includes expertise required for safe and reliable component and system design, development, and integration. Competency assumes a breadth of knowledge of many specialty areas such as geometric dimensioning and tolerancing, cutting edge computer aided design and modeling tools, state of the art manufacturing and fabrication processes, specialty hardware and fasteners, bolted joint design, fits and interfaces, technical specifications, instructions and procedures, engine systems design, functional design, and design for optimization of component performance in relation to mission environments through testing. Also, depth in familiarization with system engineering tools, procedures, and documentation such as configuration management, the design review process, interface control documents, and interface requirements documents.

2.1.1.4. Test Fixtures and GSE Design and Development Engineering (DDETEST) [1031]

Knowledge of all aspects of the technical design and development process as applied to ground support equipment and special test fixtures relating to systems or subsystems including structural, electrical and propulsion components and technologies. Includes the definition or assessment of concepts and designs to assure adequate functional performance is achieved and system requirements are met and an assessment of the fabrication process and techniques, production assessment, and process verification of the hardware design. Includes knowledge and capability to create and evaluate subscale or full-scale models, test articles, or prototypes to assess the system or subsystem design, development, and integration meets the intended objectives.

2.1.2. Engineering and Science Support (ENGSCISUP) [11]

Knowledge, capabilities and practices associated with supporting engineering and science functions. This support includes laboratory, modeling, manufacturing and analytical activities. Focus is on the abilities of an individual to visualize, plan and execute limited instructions from engineering, in the form of drawings/schematics, written or verbal direction, in order to produce a model, prototype or finished product. The technician's application of tools and apparatus, both physical and analytical, are a key element of this competency.

2.1.3. Integration Engineering (INTEGENG) [9]

Knowledge and capability to integrate all elements into a functioning system or subsystem such as complex flight to flight and flight to ground and facilities systems. Includes knowledge and capabilities required for safe and reliable integration

of different elements of a system, schedules, configurations and resources as well as the development of launch, mission, manifest, contingency and long-range plans and responses to externally-driven requirements.

2.1.3.1. Structural Integration Engineering (INTSTRUCT) [1032]

Knowledge of engineering; system engineering; manufacturing; testing; quality, reliability, and safety engineering; risk management; and resource, schedule, and programmatic requirements for the integration of structural systems, subsystems, and components that verify the completed products function, efficacy, and conformance to design requirements. This activity involves the long range planning, coordination, oversight, and integration of all structural systems, subsystems, and components in accordance with requirements and specifications, both external and internal.

2.1.3.2. Materials Integration Engineering (INTMATER) [1033]

Knowledge and capability to integrate all materials engineering elements and practices associated with research into the characteristics and performance of materials and the design, development and testing of those materials, into a functioning system or subsystem such as complex flight to flight and flight to ground and facilities systems. Includes knowledge and capabilities required for the development and application of math models and statistical analysis for assessment of material durability and response to environmental conditions and contaminants, required for safe and reliable application and integration of materials engineering elements of a system, schedules, configurations and resources as well as the development of launch, mission, manifest, contingency and long-range plans and responses to externally-driven requirements.

2.1.3.3. Systems Integration Engineering (INTSYSTEMS) [1034]

The Systems Integration Engineer (SIE) is responsible for integration of all engineering products and resources necessary for product development and is the single technical interface between the engineering organization and the program/project office (PPO) for a specific product. The SIE is responsible for vertical and horizontal integration of all engineering activities required for product delivery and is responsible to the PPO for cost and schedule performance under technical direction of a chief engineer. The SIE tracks design decisions and requirements, maintains technical baselines, manages interfaces, provides input to the PPO for risk management, tracks cost and schedule, tracks technical performance, verifies requirements are met and reviews and audits program engineering support activities.

2.1.3.4. Electrical Integration Engineering (INTELECT) [1035]

Knowledge and capability to integrate electrical components for air, space and ground systems and instruments into a functioning system or subsystems such as complex flight to flight, flight to ground, and facilities systems. Includes knowledge and capabilities required for safe and reliable integration of electrical systems, schedules, configurations, and electrical resources including power generation, control, and storage; controls and instrumentation; communications and data management; and electrical packaging, as well as the development of electrical and electronic systems impacts to launch, mission, manifest, contingency and long-range plans, and responses to externally-driven requirements.

2.1.3.5. Propulsion Integration Engineering (INTPROPEL) [1036]

Knowledge and capability to integrate propulsion elements into a functioning system or subsystem such as the integration of a propulsion system into a test stand, vehicle, or spacecraft or the integration of components (turbomachinery, main chambers, valves, etc.) into a propulsion system. Includes knowledge and capabilities required to understand the complex fluid and structural interactions of the various propulsion system or subsystem

elements such as the interaction between the engine and main propulsion system or the interaction between a turbopump and an engine system. Includes the planning, design, development, and evaluation of the various components and subsystems that is necessary to insure proper function and compatibility within the propulsion systems.

2.1.4. Manufacturing Engineering (MANUFACT) [24]

Knowledge, capabilities and practices to perform concurrent engineering and producibility. Includes knowledge and ability to review design documentation, determine resource requirements for manufacturing activities, research and develop manufacturing processes, plan and manage hardware fabrication and assembly, develop and maintain manufacturing project schedules, and resolve manufacturing related problems.

2.1.5. Process Engineering (PROCESSENG) [114]

Knowledge, capabilities and practices associated with the development and implementation of safe, efficient, and effective processes to achieve performance excellence in Center operations, development, and enabling functions. This includes the identification, development, mapping, modeling, measuring, and analysis of processes that enable work activities, including their suppliers, inputs, outputs, customers, outcomes, and related decisions. Areas of specialization include queuing theory, function analysis, work method/task analysis, human factors, stochastic methods, advanced statistical analysis methods, process improvement techniques, optimization algorithms, process simulation modeling (discrete and/or continuous), linear programming, and scheduling and capacity analysis systems.

2.1.6. Systems Engineering (SYSTEMSENG) [7]

Knowledge, capabilities and practices associated with defining, developing, integrating and verifying an end-to-end new or existing system, with the objective of optimizing performance, safety and mission objectives. Includes knowledge required for safe and reliable system development/integration. Ability to perform feasibility assessments, provide functional analyses; develop and manage system performance and interface requirements to ensure the resulting system meets all technical objectives; perform systems analysis and trade studies, and oversee systems integration and verification. Includes knowledge of system engineering tools and procedures such as configuration management, integrated logistics management, risk management, and documents such as integrated schematics, interface control documents, and interface requirements documents for defining interconnection of system parts, documenting and managing system configurations and identifying all required interfaces, and mass properties for determining weight distributions. Assumes a breadth of knowledge of many specialty areas, and a detailed understanding of how the pieces fit together. Thorough knowledge of the NASA process of reviews, audits, and control gates to ensure all technical and programmatic requirements are being met in an organized fashion.

2.1.7. Test Engineering (TESTENG) [10]

Knowledge of physics, engineering and manufacturing to test systems or subsystems under development for their functioning, efficacy and conformance to design requirements, or to test prototypes for feasibility. May involve ability to plan, conduct, and evaluate developmental, qualification, and acceptance testing in accordance with NASA, Military or Commercial Specifications of air, space and ground systems, components, piece parts, as well as integrated systems. Includes knowledge of environmental test techniques used to simulate loading conditions such as launch, reentry, orbit, and landing, including vibration, shock, acoustics, contamination, acceleration, electromagnetics, radiation, pressure, thermal, chemical, microgravity and solar vacuum, aerodynamics and temperature and humidity. Includes knowledge required for safe and reliable system development/integration.

2.1.7.1. Structural Test Engineering (TSTSTRUCT) [1037]

Knowledge of physics, engineering, and manufacturing to test structural systems, subsystems, and components that verify the functioning, efficacy, and conformance to design requirements of these structures. This activity involves the planning, conduct, and evaluation of results for structural system development, qualification, or acceptance tests in accordance with NASA, military or commercial specifications. It includes the knowledge of structural test techniques to simulate loading conditions for structural systems experiencing launch, on-orbit, re-entry or landing environments and the associated response measurement methods to verify or correlate the structural system's analytical models. Test discipline skills associated with this competency include: vibration; acoustics; shock; static structural loads; and modal analysis.

2.1.7.2. Materials Test Engineering (TSTMATER) [1038]

Knowledge, capabilities and practices associated with materials testing and the behavior and performance characteristics of materials in their use environment. Included is the understanding of various test set ups, instrumentation, data acquisition, equipment and tools utilized for material qualification and certification for ground and aerospace flight systems.

2.1.7.3. Thermal Test Engineering (TSTTHERMO) [1039]

Knowledge of physics, engineering, thermal, and thermal vacuum to test systems or subsystems under development, qualification, or acceptance requirements for their functioning, efficacy and conformance to design requirements and performance, or to test prototypes for feasibility. May involve ability to plan, create test procedures, conduct, and evaluate developmental, qualification, acceptance, and flight test and checkout requirements in accordance with NASA, Military or Commercial Specifications of test facilities, space and ground systems, components, piece parts, as well as integrated systems. Includes knowledge of environmental test techniques used to simulate thermal and thermal vacuum conditions such as launch, reentry, orbit, and landing, including radiation, pressure, thermal, outgassing, microgravity and solar vacuum, aerodynamics and temperature and humidity. Includes knowledge required for safe and reliable system testing and development/integration.

2.1.7.4. Electrical Test Engineering (TSTELECT) [1040]

Knowledge of the principles of electrical engineering, and electronic manufacturing to test components, systems, or subsystems under development for their functioning, efficacy and conformance to design requirements, or to test prototypes for feasibility. May involve ability to plan, create test procedures, conduct, and evaluate developmental, qualification, acceptance, and flight test and checkout requirements testing in accordance with NASA, Military or Commercial Specifications of air, space and ground systems, components, piece parts, as well as integrated electronic systems or sub-systems. Includes knowledge of environmental test techniques used to verify workmanship and validate operations in a relevant environment, including vibration, shock, acoustics, electromagnetic interference and compatibility (EMI/EMC), depressurization and vacuum operation, and thermal cycling.

2.1.7.5. Propulsion Test Engineering (TSTPROPUL) [1041]

Knowledge, capabilities and practice associated with propulsion systems, subsystem, and/or component testing and cryogenic fluids as it relates to the functioning, efficacy and conformance to design requirements, or to test prototypes for feasibility or flight performance. Includes developing the procedures, methods, and techniques necessary to perform the test, to prepare, checkout, and assess the readiness of the test facility, and to ensure the safety of the systems or hardware. Includes full-scale or sub-scale testing of engine systems, subsystems, or components such as combustion chambers, nozzles, turbomachinery, ducts, valves, and pressurization systems. Includes knowledge of test techniques used to verify workmanship and validate operations in a relevant environment in accordance with NASA, Military or Commercial Specifications of air, space and ground systems, components, piece parts, as well as integrated propulsion systems or sub-systems.

2.1.8. Entry, Descent and Landing (EDL) [177]

Knowledge of and ability to develop the systems and technologies required for the phase(s) of a mission that occur during flight within a planetary atmosphere, be it Earth, Mars or beyond. Includes knowledge and understanding of aerobraking, aerocapture, and/or direct atmospheric entry, decent, and landing (EDL). Competency includes broad understanding of the high energies involved during the high risk entry of the overall mission, similar to the launch phase. Includes knowledge of aerodynamics; subsonic through hypersonic, aerothermodynamics, reacting gas chemistry high speed flow, trajectory and mission analysis, simulation and design), thermal protection systems, Guidance, Navigation and Control, GN&C, thermal systems analysis, terminal decent and landing systems, parachutes, airbags, propulsive systems. Competency includes both human (ESMD) and robotic (SMD) missions.

2.2. Systems Analysis & Mission Planning Competency Suite

2.2.1. Advanced Mission Analysis (ADVMI) [89]

Knowledge, capabilities, and practices associated with the conception, development, and planning of advanced mission architectures and systems synthesizing science, commercial, military and exploration requirements and considering feasibility, performance, cost, risk, schedule, reliability/safety and environmental effects.

2.2.2. Aerospace Systems Concept Development & Technology Assessment (ASCDTA) [90]

Knowledge, capabilities and practices associated with the development of aerospace vehicle and spacecraft concepts from a systems perspective to satisfy prescribed mission architectures and identify enabling technologies for performance, cost, risk and safety. Knowledge of conceptual design, sizing & synthesis of aerospace vehicles or spacecraft. Knowledge of elicitation from subject matter experts of the potential technology improvements from R&D projects in all the relevant aerospace disciplines.

2.2.3. Mission Analysis and Planning (MAP) [1]

Knowledge and ability to analyze requirements of current and near-term missions. Manage integration of technical elements such as vehicle design, flight trajectories, and operational and ground-based infrastructure requirements in order to meet mission and programmatic objectives.

2.2.4. Mission Flight Design (FLTDSG) [2]

Knowledge and ability to conduct computational analysis of air and space vehicle flight design for mission implementation, including sequencing, trajectory optimization, orbital mechanics, flight mechanics and celestial mechanics. Use flight design modeling and simulation tools that determine optimum trajectory solutions. Includes in-depth analysis of air borne and ground-based trajectory predictions, automated trajectory planning and modeling and trajectory negotiation and data exchange as well as optimization tools which take into account environmental and design constraints. Involves analysis of flight dispersion variables and navigation predict generation.

2.2.5. Simulation Systems (SIMULATE) [175]

Knowledge, capabilities, and practices associated with real-time simulation which is a realistic representation of the physical system being studied (as opposed to pure mathematical analysis or standard computer analysis) and permits both quantitative and qualitative (human analysis) evaluation. A simulation system is usually characterized by a space or aviation flight deck/cockpit, interface hardware, computers, and flight crew, all of which are linked together in a closed loop system. In addition, flight crew can be trained for various operational concepts without using expensive vehicles.

- Require knowledge and experience in real-time concepts, computer system engineering and operations; simulator hardware engineering, operation, and maintenance; real-time simulation modeling analysis; and real-time software design, development, verification, and validation.
- Require knowledge and capabilities in simulator hardware engineering that includes design and implementation of a flight deck equipped with instrument panels, side stick/wheel column as vehicle controlling devices, visual scene for out-the-window view, heads-down display systems, and environmental sound effects.
- Require knowledge and capabilities in developing and operating a simulation driven by high speed, high performance computers for complex math model computation; specialized graphics computers, visual scene computers, and video distribution; high performance computer network; and special purpose software for real-time math modeling, graphics generation, system interfaces, communications, and networking.

2.3. Aeronautics Competency Suite

2.3.1. Acoustics (ACOUSTICS) [103]

Knowledge, capabilities, and practices related to interior and exterior noise reduction and acoustic design for advanced aerospace systems, subsystems, and components to meet environmental requirements. Includes knowledge and application of experimental and computational aero and structural acoustics. Inherent in this competency is the capability to determine the influence of acoustic environment on ground observers and vehicle passengers alike, as well as to develop an understanding of its impact on vehicle structural responses, including sonic fatigue. Includes ability to conceive, plan, and implement appropriate experimental and flight test programs that are designed to understand and predict the acoustic environment and to validate advanced active and passive noise control concepts.

2.3.2. Aerodynamics (AERODYN) [101]

Knowledge of the science of aerodynamics, with the ability to plan, conduct, interpret and correlate results of experimental investigations, analytical methods and numerical simulations with varying degree of fidelity such as computational fluid dynamics (CFD) analyses for the design of aerospace vehicles and components, which include commercial and military aircraft, space transportation systems and launch vehicles, and the prediction of their aerodynamic performance from subsonic to hypersonic Mach numbers, including incompressible flows, and over wide range of Reynolds numbers and flight conditions. Includes knowledge, capabilities and practices associated with fluid dynamics and flow physics modeling in specialized areas such as external and internal flows, analytical and CFD prediction methods, wind tunnel model and flight testing techniques, unsteady and high angle-of-attack flow phenomena, propulsion system-airframe integration, rotary wing aerodynamics, cavity flows, etc., for a realistic assessment and improvement of the vehicle aerodynamic performance.

2.3.3. Aeroelasticity (AEROELA) [100]

Research knowledge, capabilities, and practices for investigating aeroelastic phenomena and complex steady and unsteady aerodynamic flow phenomena especially in the transonic speed range, for investigating, developing, and demonstrating novel concepts that prevent aeroelastic instabilities, alleviate adverse aeroelastic responses, reduce loads and vibrations, and exploit the aeroelastic characteristics of aerospace vehicles, for developing analytical methods that predict the aeroelastic and aeroservoelastic responses of aerospace vehicles, and for conducting unsteady aerodynamic, aeroelastic, and aeroservoelastic wind-tunnel tests.

2.3.4. Aerothermodynamics (AEROTHM) [102]

Knowledge, capabilities, and practices related to aero/aerothermodynamic design for aerospace vehicles and components under various flight conditions including liftoff, ascent, stage separation and reentry. Ability to plan, conduct and interpret results of experimental investigations and analytical/computational fluid dynamics to derive aerothermal environments. Inherent within this competency is also the ability to determine the effects of propulsion system plumes on the vehicle/components performance and environment. Knowledge of high temperature gas physics including molecular and atomic internal energy structure, rate processes, and radiative emission characteristics.

2.3.5. Air Traffic Systems (AIRTRAFFIC) [108]

Knowledge of Air Traffic Management elements, and their properties and interactions, such as air space and range systems, air traffic regulations, aircraft characteristics, airport structures and systems, and geographic and topographical patterns. Apply knowledge of these elements to the development of new systems and tools to improve the efficiency, effectiveness and capacity of the air traffic system, using advanced distributed modeling techniques to research and test concepts and prototypes.

2.3.6. Flight Dynamics (FLTDYN) [98]

Knowledge, capabilities, and practices associated with research and technology in analytical, computational, and experimental methods to characterize the flight dynamics behaviors of aerospace vehicles.

2.3.7. Simulation/Flight Research Systems (SIMFLTSYS) [110]

Knowledge capabilities and practices used to provide and integrate appropriate real-time hardware/software systems in support of piloted simulators and research aircraft that enable experiments in Flight Dynamics, Guidance/Navigation/Control, Crew Systems and Aviation Operations, Reliable Digital Systems and Electromagnetics.

2.4. Human and Biological Competency Suite

2.4.1. Aerospace Medicine (AEROMED) [36]

Knowledge, capabilities, and credentials to engage, determine, and maintain and provide for the physical and behavioral health, and medical care of crew members, their families, and associated personnel during all mission phases (pre-flight, in-flight and post-flight) in the diverse environments of atmospheric and space flight missions.

2.4.1.1. Medical Practice (MDPRACTICE) [1070]

Knowledge and expertise of the multi-disciplinary practice of Aerospace Medicine taking into account the hostile, diverse environments of NASA aeronautic and space missions. Health maintenance and diagnosis and treatment of illness and injuries are the goals of medical practice. Knowledge and skills of physiology of mission environment, operational medicine, clinical practice, human systems interfaces, and astronaut selection and training.

2.4.1.2. Behavioral Health (MDBEHAVIOR) [1071]

Knowledge and expertise of psychology/psychiatry in aviation and operational settings to maintain health and performance of crewmembers and appropriate associated personnel during all mission phases. Knowledge and skills

of clinical and operational psychiatry, clinical, aviation or organizational psychology, psychosocial psychology, behavioral health maintenance, human systems interfaces and astronaut selection and training.

2.4.2. Bioengineering (BIOENG) [58]

Application of technologies to living systems including such areas as biomechanics, imaging, biomedical transducers, biofluids and sensors.

2.4.3. Biomedical Engineering (BIOMEDENG) [35]

Knowledge of engineering, design, development, analysis and test of biomedical systems such as equipment and tools for maintaining crew psychological and physical health for long-duration missions in space. Involves knowledge of broad array of engineering disciplines, and biomedical research, human factors and space medicine findings and practices. Includes knowledge of operational impacts and sustaining engineering on the systems.

2.4.4. Biomimetics (BIOMIMETIC) [59]

Knowledge and capability to research and further study natural processes which have potential to be deciphered, mimicked and adopted in technology applications based on biological systems such as environmental heat sensors, retinal or iris scans or face recognition technology. Also includes capabilities in the area of neural electric machine control.

2.4.5. Crew Systems and Aviation Operations (CSAOPS) [97]

Knowledge, capabilities, and practices associated with research and technology in analytical and experimental methods for pilot/automation integration, crew station design, and aerospace vehicle operations concepts.

2.4.6. Extravehicular Activity Systems (EAS) [38]

Knowledge of engineering, design, development, analysis and test of EVA systems. Requires knowledge and skills regarding the unique environment and constraints in sending a crewmember into space outside of a vehicle, and expertise in designing and developing spacesuits, tools, mechanisms, and operations that support such an activity. Includes knowledge of operational impacts and sustaining engineering on the system.

2.4.7. Environmental Control and Life Support Systems (ECLSS) [37]

Knowledge, capabilities and practices associated with environmental control and/or life support systems used to protect life in dangerous or insupportive environments for flight or ground operations, including related instrumentation, controls, data acquisition, pneumatics and mechanisms. May include knowledge and capabilities needed for development of advanced and/or regenerative life support, such as how to apply plant physiology and pathology, microbial ecology, molecular biology, biological engineering, chemistry, chemical engineering and landscape ecology to development of advanced, regenerative life support such as air and water recycling, solid waste resource recovery, food sources and thermal environmental control.

2.4.8. Environmental Factors (ENVFACT) [39]

Knowledge of practices associated with research of and applying research to spacecraft and space-based environments and the environmental effects on humans and other organisms with specific emphasis on barophysiology, microbiology and toxicology and radiation. Knowledge of physical and chemical sciences, including heat and mass transfer, acoustics, radiation, thermodynamics, fluid mechanics, and chemical, biological, and metabolic processes. Ability to integrate and apply this understanding to develop systems and technology to enable humans to live and work safely and effectively in space.

2.4.9. Fundamental Human Factors Research (HUMFACTRES) [40]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of environmental, individual, cognitive and organizational factors on the behavior and performance of humans, as well as the associated underlying physiological, psychological and social/organizational mechanisms that influence human behavior. Includes knowledge of a variety of psychophysical areas such as, but not limited to, biomechanics, perception, cognition, sensory-motor control, communication, decision-making, and teamwork and human-automation interaction. Knowledge of how to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human cognition and performance. Knowledge of how to develop human factors principles and guidelines which could be used toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.1. Biomechanics and Ergonomics Fundamental Research (HFRBIOMECH) [1005]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of environmental and physical factors on the behavior and performance of humans, as well as the associated underlying physiological and psychological mechanisms that influence human behavior. Includes knowledge of mechanics of human movement and mechanical study of bones, muscle, and tissue, and knowledge of how to model physical work. Knowledge of how to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human physical performance. Knowledge of how to develop human factors principles and guidelines which could be used toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.2. Habitability and Environmental Psychology Fundamental Research (HFRHABIT) [1006]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of induced environments, including habit design (e.g., micro-gravity, hyper-gravity, partial gravity, vibration, isolation, radiation, lighting, noise) on the behavior and performance of humans. Knowledge of how to develop and validate models of environmental impacts on human behavior and to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human performance in induced environments. Knowledge of how to develop human factors principles and guidelines which could be used toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.3. Perception and Psychophysics Fundamental Research (HFRPERCEPT) [1007]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data

collection, data analysis, statistics, and documentation). Knowledge of the effects of a wide range of environmental factors on the behavior and performance of humans, as well as the associated underlying physiological and psychological mechanisms that influence human behavior. Knowledge of a variety of psychophysical areas such as, but not limited to, vision, eye movements, audition, haptics, manual control, vestibular, and multimodal interactions of these modalities. Knowledge of how to develop and validate models and to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human performance. Knowledge of how to develop human factors principles and guidelines which could be used toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.4. Psychophysiology Fundamental Research (HFRPSYPHY) [1008]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of a wide range of environmental factors on the behavior and performance of humans, as well as the associated underlying psychological mechanisms (such as stress) that influence human physiological response (such as heart rate). Knowledge of physiological sensors and instrumentation. Knowledge of how to develop and validate models and to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human performance. Knowledge of how to develop human factors principles and guidelines which could be used toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.5. Fatigue, Alertness, Circadian Rhythms Fundamental Research (HFRATIGUE) [1009]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of a wide range of environmental factors on fatigue, alertness and the associated behavior and performance of humans. Knowledge of the processes and mechanisms associated with Circadian rhythms. Knowledge of the underlying physiological and psychological factors that affect and are influenced by fatigue and alertness. Knowledge of a variety of methods for measuring and evaluating human fatigue and alertness and measuring the associated impact on human performance. Knowledge of how to develop and validate models and to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human performance. Knowledge of how to develop human factors principles and guidelines which could be used toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.6. Cognitive Science Fundamental Research (HFRCOG) [1010]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of a wide range of environmental factors on the behavior and performance of humans, as well as the associated underlying physiological and psychological mechanisms that influence human behavior. Knowledge of a variety of cognitive areas such as, but not limited to, memory, attention, task processing and their relationships and influence on vision, eye movements, audition, haptics, manual control, vestibular, and multimodal interactions of these modalities. Knowledge of how to develop and validate models and to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human performance. Knowledge of how to develop human factors principles and guidelines which could be used toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.7. Communication and Knowledge Management Fundamental Research (HFRCOMM) [1011]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of a wide range of environmental factors on the behavior and performance of humans, as well as the associated underlying psychological, social, and organizational mechanisms that influence human behavior. Knowledge of a variety of areas such as, but not limited to, human verbal and nonverbal communication, linguistics, social psychology, and computer-mediated communication. Knowledge of how to develop and validate models and to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human performance. Knowledge of how to develop human factors principles and guidelines which could be used toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.8. Decision Making and Risk Management Fundamental Research (HFRDECISMK) [1012]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of a wide range of environmental factors on the behavior and performance of humans, as well as the associated underlying psychological, social, and organizational mechanisms that influence human behavior. Knowledge of a variety of areas such as, but not limited to, cognitive, social, and experimental psychology, behavioral economics, human verbal and nonverbal communication, decision theory, game theory, and cross-cultural psychology. Knowledge of how to develop and validate models and to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human performance. Knowledge of how to develop human factors principles and guidelines which could be used toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.9. Organizational Science Fundamental Research (HFRORG) [1013]

Knowledge of human organizational research methods (e.g. literature search, ethnography, participant observation, experiment, operational analysis, observation, survey, interview, protection of research subjects, content analysis, archival analysis) and activities (e.g., quasi-experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of a wide range of environmental factors on the behavior and performance of organizations, as well as the associated underlying psychological, social, and organizational mechanisms that influence human behavior. Knowledge of a variety of areas such as, but not limited to, industrial psychology, organizational psychology, organizational science, organizational development, organizational communication, behavioral economics, game theory, and business administration. Knowledge of how to develop and validate models and to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human performance. Knowledge of how to develop principles and guidelines which could be used toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.10. Human-Machine Interaction Fundamental Research (HFRHUMMACH) [1014]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of a wide range of human-machine interface and system factors on the behavior and performance of humans. Knowledge of a variety of areas such as, but not limited to, includes human-computer interaction and human-automation interaction, and their effects on workload, situation awareness, performance accuracy, task completion time and reaction time. Knowledge of how to develop and validate models and tools to measure human performance and effects of various interface and system

designs. Ability to use these models and tools to perform validation and verification of potential design solutions. Able to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human-machine interaction and interface design performance. Knowledge of how to develop human factors principles and guidelines which could be used toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.11. Manual Control Fundamental Research (HFRMANCNTL) [1015]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of a wide range of environmental factors on the behavior and performance of humans, as well as the associated underlying physiological and psychological mechanisms that influence human behavior. Knowledge of a variety of psychophysical areas such as, but not limited to, manual control and haptics and their interaction and influence on task performance and auditory and visual perception. Knowledge of how to develop and validate models and to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human performance. Knowledge of how to develop human factors principles and guidelines which could be used toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.12. Training and Adaptation Fundamental Research (HFRTRNG) [1017]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of a wide range of training and physical (including hypo- and hyper gravity) environments and factors on memory, behavior, the Knowledge of how to learn and human performance, as well as the associated underlying physiological and psychological mechanisms that influence human behavior. Knowledge of perceptual and behavioral adaptation, learning, training techniques, memory, and a variety of psychophysical areas such as, but not limited to, vision, eye movements, audition, haptics, manual control, vestibular. Knowledge of how to develop and validate training techniques and training evaluation methodologies. Knowledge of how to develop measures of adaptation effects on performance and effectiveness of countermeasures and mitigation strategies in a wide-variety of environments. Knowledge of how to develop human factors principles and guidelines which could be used toward designing training techniques and technologies for human performance in complex aerospace operational environments to reduce errors and increase productivity. Knowledge of how to develop models to predict adaptation effects and to develop human factors principles and guidelines which could be used toward designing and developing countermeasures and technologies to mitigate and measure adaptation effects on human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.9.13. Human Performance Fundamental Research (HFRHUMPERF) [1018]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects and associated techniques and methodologies to measure their impact of a wide range of environmental factors on the behavior and performance of humans, as well as the associated underlying physiological and psychological mechanisms that influence human behavior. Knowledge of human visual, vestibular, haptic, and auditory sensory system functioning, including brightness and contrast sensitivity coding, signal processing, binocular fusion, depth perception, motion cuing, object recognition, adaptation, oculomotor functioning, and multimodal interactions of these systems. Knowledge of human cognitive processes, including selective attention mechanisms, word processing, task-level influences on perceptual processing, multi-tasking limitations and capabilities, human performance modeling, and visual information acquisition strategies. Knowledge of sensorimotor feedback systems, manual control, and perceptual-motor transfer functions. Knowledge of group interactions and decision dynamics under stressful environmental conditions. Knowledge of human performance measures related to human error, workload, situation awareness,

performance accuracy, task completion time and reaction time. Knowledge of how to develop and validate models and tools to measure human performance and effects of various interface and system designs. Ability to use these models, tools, and testing to perform validation and verification of potential design solutions. Able to apply theories, experimentation, analysis and modeling to increase fundamental knowledge about human error and error countermeasures. Knowledge of how to develop human factors principles and guidelines which could be used toward

2.4.10. Human Factors Engineering (HUMFACTENG) [41]

Knowledge and capabilities to apply human factors engineering principles, standards, design guides, regulations, and advisory material to the design, test, evaluation, operation, and maintenance of systems and processes. Knowledge of the physical and psychological processes, capabilities, skill levels, and limitations of humans, such as the science and practical application of experimental psychology, cognitive psychology, human reliability, anthropometrics, biomechanics, and psychophysiology. Knowledge of hardware and software human-interface design principles, modalities (e.g. physical, visual, auditory, verbal), methods (e.g. field studies, analysis, modeling, prototyping, laboratory experiments, simulations, mockups, database reviews) and tools. The ability to define and analyze human engineering requirements, formulate human performance criteria, develop guidelines, develop system concepts, designs, and prototypes; evaluate human-centered technologies, and develop training curricula for application to processes and systems. Ability to use human performance models, tools and testing to perform validation and verification of potential design solutions..

2.4.10.1. Biomechanical Engineering, Technology, Standards (HFEBIOMECH) [1019]

Knowledge of human engineering research methods (e.g. literature search, experimentation, operational analysis, task analysis, observation, survey, protection of research subjects, simulations, mockups) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge and capabilities to apply human factors engineering principles, standards, design guides, regulations, and advisory material to the design, test, evaluation, operation, and maintenance of systems and processes. Knowledge of how to apply human factors principles and guidelines toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity. Knowledge of the effects of environmental and physical factors on the behavior and performance of humans, as well as the associated underlying physiological and psychological mechanisms that influence human behavior and how to apply such knowledge to the development to aerospace (sub)systems. Includes knowledge of mechanics of human movement and mechanical study of bones, muscle, and tissue, and knowledge of how to model physical work. Knowledge of hardware design principles, methods and tools. The knowledge of how to define and analyze human engineering requirements, formulate human performance criteria, develop guidelines, and evaluate technologies against human engineering requirements. Ability to use human performance models, tools and testing to perform validation and verification of potential design solutions.

2.4.10.2. Space Human Factors Engineering, Technology, and Standards (HFESPACE) [1021]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, task analysis, observation, survey, protection of research subjects, simulation, mockups) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge and capabilities to apply human factors engineering principles, standards, design guides, regulations, and advisory material to the design, test, evaluation, operation, and maintenance of systems and processes. Knowledge of the effects of induced environments factors (e.g., micro-gravity, hyper-gravity, partial gravity, vibration, isolation, radiation, lighting, noise) on the behavior and performance of humans. Knowledge of how to apply such knowledge to the development to aerospace (sub)systems to support human performance. Knowledge of hardware and software design principles, methods and tools. The knowledge of how to define and analyze human engineering requirements, formulate human performance

criteria, develop guidelines, and evaluate technologies against human engineering requirements. Ability to use human performance models, tools and testing to perform validation and verification of potential design solutions. Knowledge of how to apply human factors principles and guidelines toward designing technology for complex space operational environments to ensure the safety and productivity of humans in space.

2.4.10.3. Habitability Engineering, Technology, and Standards (HFEHABIT) [1022]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, task analysis, observation, survey, protection of research subjects, simulation, mockups) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge and capabilities to apply human factors engineering principles, standards, design guides, regulations, and advisory material to the design, test, evaluation, operation, and maintenance of systems and processes to the design of vehicles, habitats (work and living spaces) and flight crew systems equipment. The knowledge of how to define and analyze human engineering requirements, formulate human performance criteria, develop guidelines, and evaluate technologies against human engineering requirements. Ability to use human performance models, tools and testing to perform validation and verification of potential design solutions. Knowledge of how to apply human factors principles and guidelines toward designing technology for complex space operational environments to ensure the safety and productivity of humans in space.

2.4.10.4. Perceptual Technologies and Standards (HFEPERCEPT) [1023]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, task analysis, observation, survey, protection of research subjects, simulation, mockups) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge and capabilities to apply human factors engineering principles, standards, design guides, regulations, and advisory material to the design, test, evaluation, operation, and maintenance of systems and processes. Knowledge of human visual, vestibular, haptic, and auditory sensory system functioning, including brightness and contrast sensitivity coding, signal processing, binocular fusion, depth perception, motion cuing, object recognition, adaptation, oculomotor functioning, and multimodal interactions of these systems. Knowledge of how to apply knowledge of human perceptual capabilities to visual display design, image and video compression, display composition and layout, icon design and font selection, auditory displays, and multimodal environments. Knowledge of how to apply models of human perception to the design of tools, procedures, and technologies for use in aerospace (sub)systems. Knowledge of the effects of a wide range of environmental factors on the behavior and performance of humans. The knowledge of how to define and analyze human engineering requirements, formulate human performance criteria, develop guidelines, and evaluate technologies against human engineering requirements. Ability to use human performance models, tools and testing to perform validation and verification of potential design solutions. Knowledge of how to apply human factors principles and guidelines toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.10.5. Cognitive Technologies (HFECOG) [1024]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, task analysis, observation, survey, protection of research subjects, simulation, mockups) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of a variety of cognitive areas such as, but not limited to, memory, attention, task processing, multi-tasking, information acquisition strategies, cognitive workload, augmented cognition devices, decision support technologies, intelligent assistant systems. Knowledge of how to apply models of human cognition to the design of tools, procedures, and technologies for use in aerospace (sub)systems. Knowledge of the effects of a wide range of environmental factors on the behavior and performance of humans. The knowledge of how to define and analyze human engineering requirements, formulate human performance criteria, develop guidelines, and evaluate technologies against human engineering requirements.. Ability to use human performance models, tools and testing to perform validation and verification of potential design solutions. Knowledge of how to apply human factors principles and guidelines which could be used toward

designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.10.6. Human-Automation System Design (HFEHUMAUTO) [1025]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, task analysis, observation, survey, protection of research subjects, simulation) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of a wide range of human-machine interface and system factors on the behavior and performance of humans. Knowledge of a variety of automation areas including human-computer interaction and human-automation interaction, distributed supervisory control design; function allocation; mixed-initiative decision making, planning and operations; distributed human-machine systems and their effects on workload, situation awareness, performance accuracy, task completion time and reaction time. Knowledge of how to apply models of human cognition to the design of tools, procedures, and technologies for use in aerospace (sub)systems. The knowledge of how to define and analyze human engineering requirements, formulate human performance criteria, develop guidelines, and evaluate technologies against human engineering requirements. Ability to use human performance models, tools and testing to perform validation and verification of potential design solutions. The knowledge of how to define and analyze human engineering requirements, formulate human performance criteria, develop guidelines, and evaluate technologies against human engineering requirements. Knowledge of how to apply human factors principles and guidelines toward designing technology for human performance in complex aerospace operational environments to reduce errors and increase productivity.

2.4.10.7. Training Technologies (HFETRNG) [1026]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, task analysis, observation, survey, protection of research subjects, simulation, mockups) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects of a wide range of training and physical (including hypo- and hyper gravity) environments and factors on memory and behavior. Knowledge of the underlying physiological and psychological mechanisms that influence human learning. Knowledge of perceptual and behavioral adaptation, learning, training techniques, memory, computer-based training systems, intelligent tutoring systems, checklists, procedures, handbooks, and documentation. Knowledge of how to develop and validate training techniques and training evaluation methodologies. Knowledge of how to develop measures of adaptation effects on performance and effectiveness of countermeasures and mitigation strategies in a wide variety of environments. Knowledge of how to apply human factors principles and guidelines toward designing training techniques and technologies to reduce errors and increase productivity e in complex aerospace operational environments. The knowledge of how to define and analyze human engineering requirements, formulate human performance criteria, develop guidelines, and evaluate technologies against human engineering requirements.

2.4.10.8. Human Reliability and Human Error Analysis (HFEHUMERR) [1027]

Knowledge of human engineering research methods (e.g. literature search, experiment, operational analysis, task analysis, observation, survey, protection of research subjects) and activities (e.g., experimental design, planning data collection, data analysis, statistics, and documentation). Knowledge of the effects and associated techniques and methodologies to measure human reliability and error rates in a wide range of environments, as well as the associated underlying physiological and psychological mechanisms that influence human behavior. Knowledge of human reliability, human error analysis, and external and internal performance shaping factors such as stress, fatigue, and fitness for duty, and their effects on human reliability, error rates, workload, situation awareness, performance accuracy, task completion time and reaction time. Knowledge of how to validate models and tools to measure human performance and effects of various interface and system designs. Ability to use human performance models and tools to perform validation and verification of potential design solutions. Knowledge to apply theories, experimentation, analysis and modeling to increase knowledge about human reliability and errors and error countermeasures. The knowledge of how to define and analyze human engineering requirements, formulate human performance criteria, develop guidelines, and evaluate technologies against human engineering requirements.

Knowledge of how to apply human factors principles and guidelines toward analysis of (sub)system design and technology for human performance in complex aerospace operational environments.

2.5. Chemical Competency Suite

2.5.1. Chemistry/ Chemical Engineering (CHEMENG) [25]

Knowledge, capabilities and practices associated with Chemistry and Chemical Engineering as applied to aerospace systems for ground and flight application, particularly for use in sensors, material sciences, propulsion, environmental, ecological, biological or laboratory processes. This includes an understanding of organic, inorganic, analytical and physical chemistry and their application to a wide variety of research, development, failure analysis, and operational systems or topics and/or principles and practices of chemical engineering.

2.5.2. Pyrotechnics (PYROTECH) [18]

Knowledge of the composition, nature, applications and handling of devices or assemblies containing or operated by propellants or explosives. Involves design and development of such systems for aerospace applications, as well as study of the safe operation and maintenance of the materials and systems. Includes knowledge of fluid and mechanics, thermodynamics, materials, chemistry and physics, structures, mechanical drawings, manufacturing processes and explosive material properties.

2.6. Computer Science & Information Technology Competency Suite

2.6.1. Computer Systems and Engineering (COMPSYSENG) [80]

Knowledge of the design and development of computers and/or robots. Involves design of hardware, software, networks and processes to solve technical problems such as analyzing flight systems and aerospace data. Utilizes advanced technologies such as virtual reality, artificial intelligence, and automation. Includes knowledge of computer programming, electronics, mathematical models, and neural and/or other networking systems.

2.6.2. Data Systems and Technology (DATSYS) [161]

Knowledge of the principles, procedures, and tools of data management, such as modeling techniques, data backup, data recovery, data dictionaries, data warehousing, data mining, data disposal, and data standardization processes.

2.6.2.1. Database Management Systems (DATDBMMT) [1080]

Knowledge of the uses of database management systems and software to control the organization, storage, retrieval, security, and integrity of data. This could include the knowledge of the principles, methods, and tools for automating, developing, implementing, or administering database systems.

2.6.2.2. Large Scale Data Systems (DATLARGE) [1099]

Knowledge of design, development and implementation of large-scale scientific data storage, access, retrieval and mining systems or techniques. Includes ability to transfer research algorithms into processing code that produces scientific data products for the science community. Includes knowledge of image methods and procedures for automated feature extraction from large data sets.

2.6.2.3. Data Visualization (DATVISUAL) [1100]

Knowledge capabilities and practices associated with extracting information and knowledge from extremely large data sets through interactions with visualization systems. Capabilities include developing and using advanced data visualization systems for data mining, pattern recognition and feature extraction for application to earth and space science data sets, as well as large engineering data sets for aviation and space systems. Also involves knowledge of state-of-the art modeling and simulation techniques and hardware for interpreting data and translating the data into animated images for use in scientific and education contexts. Includes understanding of computer science, digital animation three dimensional modeling, video generation and other data representation techniques. Also involves aesthetic skills in creating renditions of data with the power to communicate meaning.

2.6.3. Intelligent/Adaptive Systems (IASYS) [85]

Knowledge of research and development techniques involving autonomous reasoning, human-centered computing and intelligent systems for data understanding towards mission requirements. Possesses knowledge of the practices associated with creating advanced intelligent, self-monitoring and adaptive computer science systems for use in development of aerospace vehicles (including unmanned systems), enhancement of aerospace flight safety and efficiency, and understanding of scientific data. Includes knowledge of modeling and simulation, techniques of artificial intelligence, virtual reality, automated software engineering, and collaborative and assistant systems, as well as understanding of vehicle health management.

2.6.4. Network Systems and Technology (NETSYS) [81]

Knowledge of how to research and implement high-speed wide area networks, including technology development to allow very advanced networks to allow data, audio and video communication. This includes electrical, optical and wireless transmission, telemetry and modeling, simulation of communication systems, and emulation of flight systems, sensors and data acquisition systems to function in an optimal fashion for distributed science and engineering applications. Involves technical skills used in the development and application of computer networks and Internet technology, including switching/routing technology, network architecture, and network security.

2.6.5. Neural Networks & Systems (NEUNETSYS) [84]

Knowledge, capabilities, and practices of synthesizing practical implementations of artificial neural networks for application to NASA missions, programs, and projects. This includes such applications as machine learning algorithms and pattern recognition systems for intelligent flight control systems, complex spacecraft docking capabilities, and instrument control mechanisms.

2.6.6. Robotics (ROBOTICS) [79]

Knowledge of engineering, design, development, analysis and testing of robotic and robotic/human systems, including telerobotics. Includes knowledge of operational impacts and sustaining engineering on the system.

2.6.7. Software Engineering (SWENG) [82]

Knowledge and ability to apply systematic, disciplines and quantifiable approaches to the acquisition and development of software systems for spaceflight, ground support, airborne and facility applications. Development and management of simulations, tools and integrated software development environments for the design, development, verification, testing, manufacture, operation and maintenance of such systems. Specialized knowledge to predict, evaluate and manage critical performance attributes of software-intense systems such as real-time response and embedded hardware-driven resource limits. Includes knowledge of high-performance computing, graphical user interfaces, networking, data integrity and security.

2.6.8. Imaging Analysis (IMAGING) [166]

This competency refers to the knowledge and capabilities associated with the analysis of all imaging media to include film, motion picture and video in both visible and non-visible spectra. Includes using digital imagery manipulation techniques such as frame averaging, motion stabilization, point tracking, etc. to obtain specific data from the images such as object size, orientation, trajectory, and velocity. Requires detailed understanding of the cameras and photographic and digital processes used to obtain the imagery. The analysis supports vehicle preparation, launch, on orbit, in-flight, landing, terrestrial, extraterrestrial and planetary study as well as other areas of imaging. This competency supports exploration, research and operations from basic scientific knowledge through flight safety.

2.7. Electrical & Electronic Competency Suite

2.7.1. Avionics (AVIONICS) [21]

Knowledge of research and engineering of real-time analog and/or digital electronic avionics systems that use data acquired from sensors and instruments and processes it to determine status of systems for aircraft and spacecraft for such purposes as flight control, flight path management and vehicle health monitoring. Includes knowledge of design and development of computational hardware and software networks and interfaces, electrical integration, power distribution and electrical systems engineering.

2.7.2. Communication Networks & Engineering (COMNETENG) [60]

Knowledge and practices associated with researching and developing air and space communications architectures and networks to meet mission and system requirements, and to research new technology for improving air traffic management and communication between satellites, flightcraft, spacecraft and ground. Includes knowledge of communication systems electronics engineering for sending and receiving signals with different networks, including wireless, digital and radio frequency bandwidths. May involve ability to make effective, efficient, and prudent use of the radio spectrum in the best interest of the Nation, with care to conserve it for uses where other means of communication are not available or feasible.

2.7.3. Electro-Mechanical Systems (ELMECHSY) [15]

Knowledge of and ability to design, develop, test, integrate and evaluate electro-mechanical systems such as; gimbals, cryogenic mechanisms, smart structures, and magnetic bearings, solar array drive systems, choppers, shutters, scanning, and focusing mechanisms. Has capability to perform the complete engineering lifecycle on systems for the drive, sensing, and control of precision flight instruments, and spacecraft subsystems.

2.7.4. Electrical and Electronic Systems (ELSYS) [13]

Knowledge of engineering design and analysis, development and research of electrical systems and components for air, space and ground systems and instruments. Includes knowledge of electrical integration (cable design/development/testing) such as electrical / electronic design requirements definition, subsystem and circuit analysis,

test procedure development, and safety analysis. Includes knowledge of analog and digital electrical systems engineering, EEE parts, electronic packaging design and tools, reliability and environmental effects, power generation, distribution, storage and conditioning systems. Knowledge of thermal analysis of printed circuit boards and use to analyze data to optimize design of flight electronics.

2.7.4.1. Instrumentation Systems (ELINSTR) [1042]

Knowledge, capabilities, and practices related to the design, development, characterization, and application of measurement and instrumentation systems used on space vehicles, flight payloads, experiments, ground test equipment, and test facilities. Ability to select and test appropriate measurement sensors for the various applications and integrate these sensors into larger subsystems. Includes knowledge of, and capability to perform, research and development of new, advanced and unique measuring sensors for both flight and ground instrumentation systems in the areas of temperature, pressure, vacuum, vibration, position, displacement, acceleration, mass spectroscopy, heat flux, flow, optical spectrometry and strain.

2.7.4.2. EEE Parts (ELEEEPART) [1043]

Knowledge, capabilities, and practices associated with EEE Parts requirements, selection, analysis, and verification for space flight and ground support hardware.

2.7.4.3. Parts & Packaging (ELPARTSPKG) [1044]

Knowledge, capabilities, and practices associated with electro-mechanical design including printed circuit (pc) layout, design of mechanical housings (black boxes), thermal analysis of pc boards and black boxes, and processes involved in the manufacturing/assembly of this hardware.

2.7.4.4. Electrical Circuits Engineering (ELCIRCUITS) [1045]

Knowledge of, and capability to perform, engineering design and analysis, development and research of electrical circuits components, subsystems, and systems for air, space and ground systems and instruments. Includes knowledge of electrical cable design, development, and testing; electrical power distribution requirements and design; electrical packaging integration; subsystem and circuit analysis; test procedure development and safety analysis; reliability and environmental effects; and knowledge of thermal analysis of printed circuit boards and subsequent use of thermal data to optimize flight electronics design.

2.7.5. Flight and Ground Data Systems (FLTGNDSYS) [19]

Knowledge of controlling and monitoring systems for aerospace vehicles, payload flight systems and related ground equipment. Knowledge of processing techniques and requirements for housekeeping, health and status, operational and science data for spacecraft and science instruments. Includes knowledge of data acquisition, storage, distribution systems, as well as data analysis and troubleshooting techniques; special purpose analog/digital data handling and unique interface applications software. Assumes broad understanding of IT, electronics and communications disciplines and an ability to integrate the pieces together to optimize the design, integration and test of flight and ground hardware and software

2.7.6. Control Systems, Guidance & Navigation (GNC) [22]

Knowledge of and ability to develop analytical, computational, and experimental methods for control/guidance algorithms, and apply research to develop requirements for control and instrumentation systems; establish component and systems; and use analytical modeling and simulation tools that determine control dynamic solutions. Knowledge of research and engineering of integrated aerospace vehicle systems for the guidance, navigation, and control and health

management of flight vehicles in the atmosphere and space. Includes knowledge of sensors and avionics, flight dynamics, mathematical modeling, experimental methods and a broad array of engineering disciplines.

2.7.6.1. Spacecraft & Stabilization Control Design and Analysis (GNCSPACE) [1046]

Knowledge of and ability to conduct research and develop analytical, computational, and experimental methods for control algorithm and control mechanism design and development for space vehicles, space systems and subsystems. Application of research and or trade studies to develop requirements for control mechanisms, sensors and instrumentation systems; establish functional, performance, design, analysis, test, integration and verification requirements for in-space control systems and precision pointing and stabilization systems, subsystems, control mechanisms and components. Competency includes the use analytical modeling and simulation tools that determine control system solutions, along with the knowledge of research and engineering of integrated space vehicle systems for spacecraft control and health management of flight vehicles in diverse space environments. Includes knowledge of sensors, avionics, actuation and control mechanisms, large space structure dynamics, mathematical modeling, interplanetary environmental models, experimental methods and a broad array of engineering disciplines.

2.7.6.2. Vehicle Control Design and Analysis (GNCVEHCNTL) [1047]

Knowledge of and ability to research and develop analytical, computational, and experimental methods for control algorithm and control mechanism design and development for launch vehicles, space vehicles, and space systems and subsystems. Apply research to develop requirements for control mechanisms, sensors and instrumentation systems; establish functional, performance, design, analysis, test, integration and verification requirements for vehicle control systems, subsystems, control mechanisms and components; and use analytical modeling and simulation tools that determine control system solutions. Knowledge of research and engineering of integrated aerospace vehicle systems for vehicle control and health management of flight vehicles in the atmosphere and space. Includes knowledge of sensors, avionics, actuation and control mechanisms, flight dynamics, mathematical modeling, experimental methods and a broad array of engineering disciplines.

2.7.6.3. Guidance Design and Analysis (GNCGUIDE) [1048]

Design of guidance algorithms that command vehicle attitude angles and throttle settings (if applicable) for taking a vehicle from the current state to the desired final state in an optimal fashion within constraints. Includes all flight phases. Implementation of guidance algorithms in simulation. Support of vehicle design analysis through guided simulations including aborts and dispersions. Support of verification through demonstration that guidance integrates with the other subsystems to meet overall requirements. Detailed definition of guidance algorithms and support of software development and testing.

2.7.6.4. Navigation System Design and Analysis (GNCNAVSYS) [1049]

Knowledge of and ability to employ navigation hardware including Inertial Measurement Unit's (IMU: gyro and accelerometers), Global Position Satellite receivers, star trackers, sun sensors, etc. Knowledge of and skill in using Kalman filtering and other software techniques to merge data from different sources to obtain an accurate and optimum navigation solution. Skill in using the output navigation solution for orbit determination.

2.7.6.5. Control Components (GNCCTLCOM) [1110]

Knowledge of and ability to perform research, design, development, test and evaluation of inertial, celestial, magnetic and electro-optical sensors; momentum control actuators, precision gimbal systems, and precision mirror actuators; and linear and rotational magnetic and piezo-electric actuators for guidance, navigation and control systems; pointing and attitude control systems; and large space structures control. Ability to select and test

appropriate sensors and actuators for the various applications and integrate them into larger subsystems. Includes knowledge of control circuitry, control theory, experimental methods, statistical analysis and application and mathematical modeling..

2.7.6.6. Control Electronics (GNCCTLELE) [1111]

Knowledge of and ability to employ navigation hardware including Inertial Measurement Unit's (IMU: gyro and accelerometers), Global Position Satellite receivers, star trackers, sun sensors, etc. Knowledge of and skill in using Kalman filtering and other software techniques to merge data from different sources to obtain an accurate and optimum navigation solution. Skill in using the output navigation solution for orbit determination.

2.7.7. Micro-Electromechanical Systems (MICROELMEC) [16]

Knowledge, capabilities and practices associated with the research, design, development, test, evaluation, application and manufacture of MEMS technologies, including microfabrication, microsystem design and integration, modeling, and packaging.

2.7.8. Metrology and Calibration Competency (METROLOGY) [160]

This competency refers to the knowledge, capabilities and responsibilities associated with the NASA Metrology and Calibration Program. It requires an understanding of the science of measurement and the comparing of a standard of known accuracy with a unit of test and measuring equipment (TME) for the purpose of detecting, correlating, reporting, or eliminating by adjustment any deviation in the accuracy of the unit being compared. It requires application of traceability principles and uncertainty analyses in relating those measurements to National standards, intrinsic standards, derived standards, or acceptable measurement systems through an unbroken chain of comparisons. This competency also includes understanding calibration laboratory requirements, their origin and purpose, application to contracts, use in auditing and surveillance, implementation in management and quality systems, and the impact of deficiencies, such as, out-of-tolerance TME.

2.7.9. Wireless Communications and Telemetry (WIRELESS) [159]

Knowledge, capabilities and practices associated with the design, analysis, development and/or test of microwave, RF electronic/Electromagnetic systems, particularly for use in flight vehicles, payloads or associated ground support equipment processes. Includes devices utilizing advanced technology for instrument (including data system) and communications (including telemetry) applications. Includes knowledge and capability in one or more of the following areas; RADAR, antenna systems for general electromagnetic components, communications systems for space, suborbital, aircraft, and ground applications, instrument systems (both active and passive), transmitting and receiving systems, transmission lines, electromagnetic propagation, data interleaving systems, navigational aids, atmospheric effects, multipath, scattering, Electromagnetic Interference, Compatibility and Effects (EMI/EMC/EME), modulation techniques, spectrum analysis, and non-ionizing radiation safety.`

2.7.10. Electromagnetics (ELMAG) [12]

Knowledge, capabilities, and practices associated with research and technology in analytical, computational, and experimental methods to quantify and control complex electromagnetics phenomena to address issues such as electromagnetic interference, electromagnetic compatibility, electrostatic discharge, and advanced integral/conformal antennas. Also includes engineering design of systems and how they will react given electromagnetic fields, compatibility, interference and discharge.

2.8. Power & Propulsion Competency Suite

2.8.1. Advanced In-Space Propulsion (ADVPRO) [72]

Research, development, design, testing and evaluation of propulsion technologies, such as nuclear propulsion, and space power generation systems to dramatically improve every aspect of in-space propulsion. Specialty knowledge in specific technologies such as nuclear propulsion, high powered electrical, solar voltaic, fuel cells, solar dynamic, and propellantless propulsion such as electrodynamic tethers and beamed energy.

2.8.1.1. Advanced Chemical & Thermal Prop (APCHEM) [1052]

Research, development, design, testing and evaluation of propulsion system technologies which seek to increase the performance rockets in the space environment through novel means such as more energetic chemical propellants, ultralightweight propellant storage and management subsystems, high temperature system operation, heat addition to propellant by insolation concentration, etc.

2.8.1.2. Electric Propulsion (APELEC) [1050]

Research, development, design, testing and evaluation of in-space electric propulsion system technologies, comprising power, power conditioning, propellant storage and management, and thrusters. Specialty knowledge in the three categories of electric propulsion thruster devices: electrothermal, electromagnetic and electrostatic.

2.8.1.3. Propellantless Propulsion (APNOPROP) [1051]

Research, development, design, testing and evaluation of in-space propulsion systems which use technologies other than discharge of a propellant to gain motive force (i.e., non-rocket propulsion). Specialty knowledge in one or more categories of propellantless propulsion devices including solar sails, momentum exchange – electrodynamic reboost tethers, aerocapture, etc.

2.8.2. Airbreathing Propulsion (AIRPRO) [69]

Knowledge of technologies and concepts for airbreathing propelled vehicles in order to enhance the safety of operations, reduce lifecycle costs, contribute to reduced costs of air travel and access to space, and reduce carbon dioxide emissions. Includes knowledge of various engine cycles, flight conditions, efficient mixing and combustion, various materials, and reliable design tools for aerodynamic and propulsion system design and performance prediction, as well as application of combined cycle systems to advanced propulsion techniques.

2.8.3. Combustion Science (BOOMSCI) [74]

Employs knowledge, capabilities and practices of study of the science of burning and burning processes, including reaction kinetics and fuels, particularly related to heat transfer, combustion and fluid flow processes by which chemical energy is converted to propulsive power. Utilizes ground based or microgravity experiments to increase basic knowledge of combustion processes

2.8.4. Hypersonic Airbreathing Propulsion (HAIRPRO) [70]

Knowledge of research and testing activities associated with hypersonic airbreathing propulsion flowpath and its integration with the vehicle concepts. Includes knowledge of the physics of high speed fuel-air mixing and combustion. Ability to plan, conduct, and interpret results of experimental and computational investigations to derive engine performance. Inherent within this competency is also the ability to design and develop engine components (inlet, combustor, and nozzle) and their interaction.

2.8.5. Hypergolic Systems (HYPERSYS) [71]

Knowledge, capabilities and practices associated with hypergolic propellants and propulsion systems. This includes handling characteristics, material properties, system safety, and system unique requirements for the safe and effective test, implementation, and operation of hypergolic systems for research, development, design, analysis, testing and/or evaluation.

2.8.6. Nuclear Engineering /Propulsion (NUCLEARENG) [138]

Knowledge of scientific and engineering principles associated with the safe design and operations of terrestrial and non-terrestrial nuclear reactor systems and radioisotope decay power systems. Knowledge and practice of neutron fission and decay of nuclear material, radioactivity determination/calculation/shielding due to fission and decay of nuclear materials, thermodynamics, nuclear/quantum physics, materials science, operations and control principles of nuclear reactors, simulation of reactor operations, health-physics effects of reactor radioactivity on humans, and probabilistic risk assessment. Ability to develop design concepts for potential nuclear propulsion systems, evaluating proposed designs and doing tradeoffs to determine which concepts can be incorporated into future space missions.

2.8.7. Propulsion Systems & Testing (PROSYS) [68]

Knowledge of conceptual aeropropulsion and aviation systems analysis and testing to assess the benefits of aeropropulsion systems, subsystems and components over all flight regimes from general aviation through space access. Knowledge of the integration of component technologies into conceptual systems. Includes research, design, testing, and evaluation of components systems such as combustors, inlets, nozzles, and turbomachinery, emissions, engine materials and structures, propulsion controls, and propulsion airframe integration. Knowledge of advanced, distributed instrumentation for acquiring improved information in a hostile engine environment. Experience in advanced methods for safe and affordable rocket propellant aeropropulsion systems testing.

2.8.8. Power - Energy Storage (PWRENG) [76]

Knowledge, capabilities, and practices associated with the design, development, test, and evaluation of battery, flywheel, fuel cell, membrane technology and other electrical power storage components and systems.

2.8.9. Power Generation - Photovoltaics (PWRPHO) [77]

Knowledge, capabilities, and practices associated with the design, development, test and evaluation of photovoltaic power generation systems, including electric actuation and solar cell/array systems.

2.8.10. Power Systems (PWRSYS) [75]

Applies knowledge and capabilities involved in the design, development, test, and evaluation of hardware for power generation, storage, conditioning and distribution for all vehicles, spacecraft, and experiments. Inherent within this is a broad knowledge of power sources and technologies and the ability to develop power architectures and integrate all elements into networked systems tailored to their specific environments. Also includes development, test and evaluation of the impact of environments and material on power systems.

2.8.11. Power Generation - Thermal Systems (PWRTHM) [78]

Design development, test, and evaluation of dynamic power systems including thermal and solar dynamic systems.

2.8.12. Rocket Propulsion (ROCKETPRO) [73]

Knowledge of research and testing activities associated with liquid and solid rocket propulsion. Includes knowledge of combustion devices, cryogenic tanks, propellant feedlines, tank pressurization systems, engine systems, and propulsion system subcomponents such as gas generators, thrust chambers, turbopump assemblies, valves, propellant ducts, and auxiliary propulsion systems, as well as application of combined cycle systems to advanced propulsion techniques.

2.8.12.1. Turbomachinery Design and Analysis (RPTURBO) [1053]

Knowledge, capabilities and practices associated with defining, developing, integrating and verifying liquid engine turbomachinery for advanced propulsion systems. This includes the ability to derive turbomachinery design requirements, perform design analyses necessary to size turbomachinery, define hydrodynamic and aerodynamic performance, establish geometry of flow path components, and perform trade studies required to evaluate the mechanical layout of the machine. Technical abilities include coordinating engine and turbomachinery interfaces; internal flow dynamics, heat transfer, rotordynamics, structural design, and material selection for all turbomachinery components especially high speed seals and bearings. Also includes component test planning, test integration, and data analysis.

2.8.12.2. Combustion Devices Design and Analysis (RPCOMBUST) [1054]

Knowledge, capabilities and practices associated with defining, developing, integrating and verifying liquid engine combustion devices for advanced propulsion systems. This includes ability to conduct preliminary design and analysis with respect to approach, dimensions, structural analysis, performance predictions and meeting engine balance requirements. Includes the ability to coordinate all activities necessary for finalization of design, fabrication, test planning, testing, and data analysis of combustion devices components which include, injectors, thrust chambers, nozzles, preburners, heat exchangers, and ignition systems.

2.8.12.3. Valves, Lines & Ducts (RPVALVES) [1055]

Knowledge, capabilities, and practices associated with propulsion system valves, valve actuators, lines, ducts, miscellaneous fluid components, and fluid systems, including functional design, detailed design, testing and evaluation, anomaly resolution, manufacturing techniques, assembly, inspection, insight and oversight. Knowledge pertaining to integration of valves, valve actuators, lines, ducts, and miscellaneous fluid components into flight systems, developmental systems, and ground test systems.

2.8.12.4. Propellant Management Systems Design and Analysis (RPPRPMMT) [1056]

Knowledge of cryogenic fluid physics and heat transfer associated with the design and development of cryogenic tankage, insulation systems, zero boil-off, cryocooler systems, thermodynamic vent systems, zero-G propellant management devices, zero-G liquid mass gauging, and incorporation of these into complete cryogenic propellant storage and management systems for long-duration space flight.

2.8.12.5. Spacecraft and Auxiliary Propulsion System Design and Analysis (RPAUXPRP) [1057]

Knowledge, capabilities and practices associated with the development of reaction control thrusters, orbital maneuvering engines, pressurization systems, propellant acquisition devices and feedsystems for storable and cryogenic propellants in pressure-fed spacecraft auxiliary propulsion systems.

2.8.12.6. Analytical and computational Fluid Mechanics (RPFLUIDMCH) [1058]

Knowledge, capabilities and practices associated with the development, validation, and application of Computational Fluid Dynamics (CFD) techniques and codes for tanks, ducts, valves, turbomachinery, and combustion components as commonly found in chemical propulsion systems (solid, liquid, and gas propellants). This involves expertise in high fidelity numerical simulation of internal flows that involve finite-rate chemistry, multiple phases, cavitation,

unsteadiness, turbulence, a large range in fluid Mach number, and relative motion between elements in the simulation. Includes the pursuit of experimental research and technology projects related to obtaining data for model validation and for demonstrating advanced fluid design concepts. Requires working knowledge of thermal and structural dynamic modeling in order to properly provide output of tasks to these other disciplines.

2.8.12.7. Dynamic Data Analysis (RPDYNDATA) [1059]

Diagnostic evaluation of rocket engine vibration data acquired from high frequency sensors such as accelerometers, strain gauges, proximity probes, and fluctuating pressures. Data from these sensors is acquired at high speeds (10,000 to 100,000 samples/second) allowing for high frequency spectral analysis to be performed on engine/engine components. Time, frequency, and phase domain analyses results are maintained in databases that are utilized to determine engine/engine component health, statistical family comparability, and flight acceptability.

2.8.12.8. Solid & Hybrid Motor Systems (SOLIDENG) [1108]

Knowledge, capabilities, and practices associated with the design and analysis of complex solid and hybrid rocket motor systems for rocket propulsion. Includes the ability to perform solid and hybrid motor requirements development and decomposition, trade studies and feasibility assessments, analytical modeling of solid systems, detailed and functional design and analysis of solid and hybrid motor components, subsystems, and systems, motor subsystem and system development, and validation and verification of requirements through test and analysis to ensure the motor system meets mission requirements. Includes the capability to develop and integrate motor subsystems including the propellant, liner, insulation, case, and seal and the ability to perform detailed analyses to ensure the design met its intended objectives. Includes the knowledge and skills associated with solid and hybrid motor system test formulation, analytical prediction, and data analysis and reduction including identifying appropriate test methods and techniques, test plan formulation, test article design, test matrix development, identification of special instrumentation, ballistics modelling, and test facility requirements necessary to conduct solid and hybrid motor system testing. Ballistics modeling includes numerical simulation of the motor burn, including propellant geometry, chemistry, burn rates, gas flows, and combustion physics. Includes data analysis, reconstruction and trending to assess potential conceptual designs, to anchor mathematical models, or to ensure functional performance and identify design deficiencies of as-designed propulsion systems over all flight / ground test regimes. Includes knowledge of the systems engineering tools, processes, and procedures that are required to ensure safe and reliable system development and integration.

2.8.12.9. Liquid Engine Systems (LIQUIDENG) [1109]

Knowledge, capabilities, and practices associated with the design and analysis of complex liquid engine systems for rocket propulsion. Includes the ability to perform engine system requirements development and decomposition, trade studies and feasibility assessments, first order performance modeling, detailed and functional design, steady-state and transient performance analysis of liquid engine components, subsystems, and systems, and validation and verification of requirements through test and analysis to ensure the engine system meets mission requirements. Includes the capability to integrate engine components including turbomachinery, combustion devices, valves, and ducts and the ability to perform detailed calculations and analyses to ensure the design met its intended objectives. Includes the knowledge and skills associated with propulsion system test formulation, analytical prediction, and data analysis and reduction including identifying appropriate test methods and techniques, test plan formulation, test article design, test matrix development, identification of special instrumentation, end-to-end systems and transient modelling, and test facility requirements necessary to conduct propulsion system testing. Includes test data assessment and data evaluation to assess potential conceptual designs, to anchor mathematical models, or to ensure functional performance and identify design deficiencies of as-designed propulsion systems over all flight / ground test regimes. Includes knowledge of the systems engineering tools, processes, and procedures that are required to ensure safe and reliable engine system development and integration.

2.9. Sensor Systems Competency Suite

2.9.1. Sensors & Data Acquisition (SENSORDATA) [20]

Knowledge, capabilities and practices associated with sensors and data acquisition systems, particularly for use in flight vehicles, payloads and/or associated ground support equipment processes, such as propulsion system sensing or vehicle health management. This includes knowledge of sensing characteristics and properties, data acquisition and data processing characteristics and properties, and system unique requirements for the safe and effective implementation of sensors and data acquisition usage in aerospace and space systems.

2.9.2. Detector Systems (DETECTSYS) [96]

Knowledge, capabilities, and practices related to the research, design, development, characterization, and application of detectors and detector systems with an emphasis on remote sensing applications. Includes research and development of advanced detectors and detector systems covering a wide spectral range to include UV, visible, IR, and microwave. Also includes the design, development, test, characterization, and integration of detectors and detector systems into a variety of applications with an emphasis on remote sensing systems.

2.9.3. Electron Device Technology (ELDEVTEC) [14]

Knowledge and practices associated in conducting research and development of electron device technology for communications component and systems such as microwave devices, MEMS and MMICs.

2.9.4. Laser/Lidar Technology (LASERLIDAR) [92]

Knowledge of high performance, high reliability, precise lasers and lidar systems for measurement of essential planet atmospheric variables including aerosols, water vapor, ozone, wind velocity, green house gasses, ozone, and metrology applications such as ice cap thickness. Ability to apply quantum mechanical modeling to engineer new laser materials that can be applied to a variety of lidar applications. Knowledge of laser materials, spectroscopy, laser and non-linear modeling, laser characterization, diode array characterization and complete detector characterization. Knowledge of coherent and direct detection LIDAR that withstand both launch and the rigors of deployment in space. Includes a broad base of technology knowledge that extends from concept development, to component, to instrument engineering and system test beds for spaceflight system risk reduction. Ability to develop and qualify spaceborne laser and LIDAR systems. Competency includes knowledge of basic material development, to laser demonstration, to lidar system engineering.

2.9.5. Microwave Systems (MICROSYS) [94]

Applies knowledge and practices associated with the design, analysis, development and test support for devices utilizing advanced technology for instrument (including data system) and communications (including telemetry) applications. Includes knowledge and capability in one or more of the following areas; antenna systems for general electromagnetic components, communications systems for space, suborbital, aircraft, and ground applications, instrument systems (both active and passive) for space, suborbital, aircraft, and ground applications, and systems and components for instrument, communication, telemetry, and radar applications.

2.9.6. Optical Systems (OPTSYS) [93]

Applies principles and practices related to the research, design, development, test, and evaluation and/or operation of optical components and systems, including optical sensors and optical data/image processing. Inherent within this competency is knowledge, capabilities, and practices associated with mechanically and digitally based optical instruments and associated measurement systems required to support siting, construction, assembly or operation of facilities, flight vehicles, payloads, infrastructure, and/or associated ground support equipment and processes. This includes the knowledge of light and optical theory and its application, surveying techniques; measurement equipment operation, care and calibration; measurement data acquisition and data processing techniques; and system unique requirements for the safe and effective implementation of data acquisition in a wide variety of systems.

2.9.7. Remote Sensing Technologies (REMOTESENS) [95]

Knowledge, capabilities, and practices related to the reasearch, design, development, characterization, and application of active and passive remote sensing and detector systems. This includes advanced flight-qualified laser systems, optical components, microwave systems, radiometric sensors, and other remote sensing instruments as well as associated component subsystems, detectors, calibration systems, and data acquisition systems. Includes knowledge of, and capability to perform, research and development of advanced detectors and detector systems covering a wide spectral range to include UV, visible, IR, and microwave. May include the design, development, test, characterization, and integration of detectors and detector systems into a variety of applications with an emphasis on remote sensing systems. Assumes a broad understanding of specialty areas such as Electro-optical, Imaging, Laser, Lidar or Optics technologies.

2.10. **Structures, Materials & Mechanics Competency Suite**

2.10.1. Analytical and Computational Structural Methods (ACMSTR) [64]

Research knowledge, capability, and practices for developing computationally efficient methodologies for structural modeling, analysis, and design, for predicting response, damage tolerance, and residual strength of aerospace structures using nonlinear structural analysis methods and models, for developing validated finite element methods for special purpose computational methods including rapid optimal structural sizing, for developing analytical models for radiation protection and shielding, and for developing multi-sensory, visually immersive simulation and design methodologies for enhanced understanding and collaboration. Involves in-depth understanding of mathematics and computer science.

2.10.2. Materials Science and Engineering (MATSCIENG) [66]

Knowledge capability and practices associated with research into the characteristics and performance of materials and the design, development and testing of those materials within aerospace structures such as flight systems, ground support and facility systems. Includes the development of math models for assessment of material durability and response to environmental conditions and contaminants. Includes broad knowledge of materials disciplines, including material types such as ceramics, metallics, and polymers as well as tribology or surface science.

2.10.2.1. Metallurgy (MSEMETAL) [1060]

Knowledge capability and practices associated with research into the production, characteristics, structure, properties, and performance of metallic materials and the design, development, processing and testing of those metals within aerospace structures such as flight systems, ground support and facility systems. Includes the development of math models and statistical methods for assessment of the durability and response of metallic materials to environmental conditions, composition, processes and applied forces. Includes broad knowledge of the metallurgical discipline, including characteristics of metallic alloy types and methods of processing metals into final products such as molding, shaping, forming, thermal treatment, joining, electrochemical processes, corrosion control,

superalloys, powder metallurgy, metal matrix composites, and nanostructures. Also includes broad capabilities in metallurgical analysis, evaluation and testing, including surface, microscopic, chemical, crystallography, internal micro and macrostructural analysis, and practices in physical and mechanical testing to determine and achieve design criteria such as strength, hardness, toughness, corrosion behavior and performance in extremes of environment and temperature, with emphasis on evaluation of metals under operating environments to produce reliable and quality materials that will resist expected failure modes such as corrosion, stress concentration, metal fatigue, creep and environmental stress fracture. Includes analysis of the nature, behavior, and physical characteristics of metals and their alloys, including the mechanisms and effects by which materials react to stresses, environments, and processes in order to select, plan, design, develop processing methods and produce materials with specific and exacting properties for aerospace applications.

2.10.2.2. Non-metallics (MSENONMET) [1061]

Knowledge capability and practices associated with research into the production, characteristics, structure, properties, and performance of non-metallic materials, including organic and inorganic polymeric materials, fiber and resin systems, as well as the design, development, processing and testing of those non-metals within aerospace structures such as flight systems, ground support and facility systems. Includes assessment of the durability and response of non-metallic materials to environmental conditions, composition, manufacturing processes and applied forces. Includes broad knowledge of the non-metallic materials engineering discipline, including characteristics of non-metal types such as ceramics, glasses, polymers, composites, thermal insulation, polymer and ceramic matrix composites as well as methods of processing into final products. Also includes broad capabilities in analysis, evaluation and testing of non-metallics including the analysis of the nature, behavior, and physical characteristics of non-metals and their constituents, including the mechanisms and effects by which materials react to stresses, environments, and processes.

2.10.2.3. Failure Analysis (MSEFAILURE) [1062]

Knowledge capability and practices associated with research into the characteristics and performance of materials and the design, development and testing of those materials within aerospace structures such as flight systems, ground support and facility systems, and investigation and evaluation of failed materials and surfaces to determine the root causes of failure. Includes the capability to analyze, plan, and execute failure analysis for a component fabricated of a structural material, identify failure modes and recommend improvements to resolve original problem (e.g., redesign component, which may include fabricating it from a more resistant material). Examines failures by evaluating metallurgical cross sections, plus application of the full range of etching techniques in addition to the traditional techniques based on reflected light microscopy, and also use a broad range of non-destructive testing techniques and a full range of mechanical testing equipment to quantify the failure modes and rates. Includes knowledge and practices in operation of electro-optical and diagnostic equipment (such as scanning electron microscopy, TEM, ESCA, OLM, SIMS, energy-dispersive x-ray, computerized radiography and Auger microprobe spectroscopy, etc.) to augment observations made metallographically to detect or confirm chemical contributions to failure mechanism composition, examine fractures or crack-like defects, and to analyze hardness, grain size, surface chemistry of the first few atomic layers, as well as bulk microstructural features. Includes the development of math models for assessment of material durability and response to environmental conditions and contaminants. Includes broad knowledge of materials disciplines, including material types such as ceramics, metallics, composites and polymers as well as tribology or surface science.

2.10.2.4. Contamination Control (MSECONTAM) [1063]

Knowledge capability and practices associated with the applications in materials, processes, contamination and foreign object debris (FOD) control requirements definition and insuring proper implementation through consulting, monitoring, testing and training services. Areas of responsibility include contamination control and foreign object debris (FOD) program development addressing both ground processing and on-orbit applications as applicable.

Ground processing includes all areas from design, materials procurement, manufacturing, assembly, test, transportation, storage, launch site processing and any post flight refurbishment activities. Included are laboratory analysis and testing skills useful in ground processing materials and instrumentation applications for surface cleaning and cleanliness analysis/inspection. On-orbit applications include thermal vacuum environmental or space simulation testing. Material and process evaluations related to space simulation include material and component outgas testing, sensitive hardware bake-out certification, and ultraviolet enhanced contaminant deposition characterization.

2.10.3. Mechanics and Durability (MECHDUR) [62]

Knowledge, capability and practices associated with using and modifying advanced analytical and computational methods to assess the capability of structures to withstand applied loads and environmental conditions without failure. Includes the development of structural math models for the analysis of complex indeterminate structures, mechanical systems, and propulsion systems to determine structural response to multiple external and internal environmental conditions. Includes the performance of fatigue and fracture mechanics analyses to assess structural life. Includes broad knowledge of associated disciplines including structural dynamics, materials science, structural and mechanical design and damage tolerance. Also involves the planning and development of structural tests including measurement, instrument and test systems to assess structural characteristics and validate mathematical models.

2.10.4. Mechanical Systems (MECHSYS) [17]

Knowledge, capability and practices involving the design, development and testing of vehicle and instrument structures, mechanisms deployment systems, associated mechanical ground support equipment and facilities structures. Includes knowledge of mechanical requirements development; mechanical system interfaces among instruments, subsystems, vehicle and ground systems; vehicle and instrument manufacturing and assembly; and vehicle and instrument alignment techniques and qualification testing. Includes knowledge of manufacturing techniques, materials, mechanical and materials standards, parametric computer aided design, mechanisms design, basic structural analysis, and knowledge of the state of best practice for complex mechanical systems.

2.10.5. Non-destructive Evaluation Sciences (NONDESSCI) [67]

Research knowledge, capabilities, and practices for developing and applying advanced sensors, health monitoring technologies, computational techniques, and NonDestructive Evaluation (NDE) methodologies, e.g., x-ray, ultrasonic, eddy current inspection, to characterize advanced materials and structures, for developing intelligent, autonomous micro and nano-methods for characterization, health monitoring, control, and self-repair of aerospace systems, and for developing techniques and concepts for nondestructive flaw detection, manufacturing process control sensing, and instrument system miniaturization.

2.10.6. Structural Dynamics (STRUCTDYN) [61]

Research knowledge, capabilities and practices for developing and analyzing methods to predict, verify and control structural dynamic response for aerospace structures and components including payloads, launch vehicles and propulsion systems. Involves ability to develop high fidelity integrated mechanical three-dimensional models to simulate system behavior and to provide a more thorough understanding of interactions between structures and the motion of mechanisms.

2.10.7. Thermal Structures (THERMALSTR) [105]

Research knowledge, capabilities, and practices for designing, developing, analyzing, and validating thermal-structural concepts for aerospace systems subjected to extreme operational environments and for developing design technology for thermal-structures applications and for multiscale optimization of metallic materials, structures, and fabrication processes.

2.10.8. Structural Impact Dynamics Characterization, Evaluation and Test Capability (STRUCTCHAR) [178]

Knowledge of all aspects of structural impact dynamics research and testing (full scale and sub-scale) to include dynamic material characterization, vertical and horizontal drop testing, vehicle crash testing, and landing stability evaluations. Competency includes knowledge of and ability to investigate problems of free, forced, or self-induced vibration of flight vehicle structures and analysis of the resulting structural responses. Knowledge and ability to analyze a large variety of configurations over an extreme range of flight parameters in overlapping related structural fields. Competency involves experimental and analytical investigations, methods development, material characterization studies and technology solutions to understand and control the response of composite and metallic structures and vehicle systems due to impact dynamic loads.

2.11. *Thermal/Fluid Competency Suite*

2.11.1. Cryogenics Engineering (CRYOENG) [26]

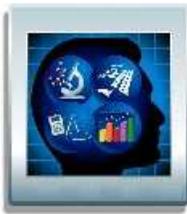

Knowledge, capabilities and practices associated with aerospace cryogenic systems, particularly for use in propulsion, life support, refrigeration and laboratory processes. This includes handling characteristics, material properties, system safety, and system unique requirements for the safe and effective usage of cryogenic fluids for research, development, design, analysis, test, operation and/or evaluation of cryogenic fluids storage and transfer systems for both fuels and oxidizers.

2.11.2. Fluid Systems (FLUIDSYS) [106]

Knowledge, capabilities, and practices associated with basic fluid physics research (including microgravitational study of complex fluids, multiphase and phase change, fluid dynamics and instabilities, and interfacial phenomena), as well as modeling and development, design, integration, analysis, test, operation and evaluation of aerospace ground and flight closed fluid systems. Knowledge of assessment of requirements, establishment of specifications and evaluation to insure proper function and compatibility of fluid systems hardware/components. Also includes integration of control logic and control systems design to ensure a fully functional process system, and design and development of instruments for imaging fluid leaks, evaluating sensitivity, vibration susceptibility and field usability to ensure safe implementation, particularly for hydraulic and pneumatic fluid power systems. This requires the basic knowledge and skill of mechanical design, fluid physics, fluid mechanics, component design, and integrated system layouts / designs and evaluation of their capability to satisfy functional and performance requirements. Agree with recommended change, however, move under new knowledge category mechanical engineering.

2.11.3. Thermal Systems (THERMALSYS) [104]

Knowledge, capabilities and practices associated with heat transfer, fluid flow, and thermodynamics in the design, development, testing, integration and evaluation of passive and active thermal control systems for spacecraft, propulsion systems, instruments, experiments, sensors, aircraft, ground systems, thermal protection systems and facility systems. Includes knowledge and practices in the development of advanced thermal hardware and thermal technology for future

spacecraft, propulsion systems, instrument, and sensor applications including heat pipes, two-phase heat transfer systems, cryogenic systems, advanced coatings, and heat pumps. Includes knowledge of the development of math models for low and high speed convection, conduction, radiation, ablation and aeroheating.

2.12. Multi-disciplinary R&D Competency Suite

2.12.1. Advanced Analysis and Design Method Development (AADMD) [91]

Enable the mission and system analysis and technology trades for advanced aerospace system concepts. Knowledge of systems analysis methods for use in advanced mission analysis and aerospace systems concept development & technology assessment. Knowledge of multidisciplinary design optimization methods for use in conceptual, preliminary and detailed engineering analysis and design of aerospace vehicles and spacecraft (including design, manufacturing, and operations).

2.12.2. Advanced Measurement, Diagnostics, and Instrumentation (ADVMDI) [111]

Knowledge, capabilities, and practices associated with research and development, assessment, implementation, and integration of advanced measurement, flow diagnostics, instrumentation to understand and discover flow physics, to develop and validate physical/chemical models, and to support aerodynamic, aerothermodynamic, acoustic, and hypersonic airbreathing propulsion design and analysis of aerospace vehicles in ground facilities and in flight. Inherent within this competency is also the ability to resolve issues arising from test articles, data systems, and integrated measurement systems and their interactions.

2.12.3. Advanced Experimentation and Testing Technologies (AETT) [109]

Knowledge of advanced experimentation and testing philosophies and approaches that provide results to inform research activities in specialized areas such as structures, materials, airborne Systems, aerodynamics, and propulsion. Ability to develop and use specialized facilities and equipment such as wind tunnels, arc-jets, and laboratories. Includes knowledge of how to plan, conduct and interpret experimental test results to understand the interaction of test elements on the design of current and future aerospace vehicles. Also involves ability to develop, manage and enhance test processes to optimize productivity, cycle time, data quality, cost and customer satisfaction.

2.12.4. Mathematical Modeling & Analysis (MMA) [86]

Knowledge, capabilities and practices associated with mathematical modeling, the design of algorithms and applied computational methods, simulation and analysis of physical systems to represent structural, fluid, thermal, dynamic, chemical, or other real phenomena in a quantifiable manner. This includes using manual calculations and computer simulation software. Models can refer to launch vehicle, spacecraft, ground support equipment, handling equipment, and facility/flight interface hardware related physical systems design of algorithms and applied computational methods. This includes capability in the area of quantum computing. Understanding of the physical principle represented in the model is essential to this competency.

2.12.5. Nanotechnology (TINYTEC) [57]

Knowledge of the study of characteristics and properties of extremely small materials for development of new capabilities and applications in support of agency missions, programs and projects such as advanced structures, storage capabilities and computer systems. Includes an understanding of how to apply nanoscience findings, and a broad knowledge of other research and engineering disciplines.

2.12.6. Space Environments Science and Engineering (SPACE_ENV) [155]

Knowledge of composition, elements, behaviors and impact of the space environments on the design, development, testing and operation of systems and components for aerospace vehicles and satellites. Involves understanding of space environments such as ionizing radiation, plasma, meteoroids, orbital debris, solar and thermal environments. Involves the ability to perform analyses to define the environments, quantify their effect on spacecraft design, development and operations and perform trade-off studies to optimize performance and assess risk.

2.12.7. Terrestrial & Planetary Environmental Science and Engineering (PLANETENV) [23]

Knowledge of composition, elements, behaviors and impact of the terrestrial and planetary environments on the design, development, testing and operation of systems and components for aerospace vehicles and satellites. Involves understanding of atmospheric variables such as wind profiles, turbulence, cloud cover, ice/frost formation. Involves the ability to perform analyses to define the environments, quantify their effect on vehicle design, development and operations and perform trade-off studies to optimize performance and assess risk.

3. Mission Operations Knowledge Domain

3.1. Mission Operations Competency Suite

3.1.1. Advanced Technical Training Design (ADVTEC) [3]

Knowledge of state-of-the art practices required to train technical personnel such as flight crew or ground support to accomplish objectives for near-term or futuristic missions. Identify training objectives, design training plans, tools, curricula and simulations using advanced techniques. Involves knowledge of instruction providers and tools, and how to employ and assess these resources.

3.1.2. Mission Assurance (MA) [30]

Knowledge of methodologies and practices such as risk identification, analysis, planning, tracking and control (e.g., Certificate of Flight Readiness process, product management process) used to achieve mission, product or process success. Activities include independent verification of product design requirements, testing validation, critical inspections, facility evaluations, flight safety analysis, development of recommendations, and tracking corrective actions.

3.1.3. Mission Execution (MISEXC) [4]

Knowledge, capabilities and practices associated with the execution of missions, including pre-launch, launch, in-orbit and recovery operations for space flight, or conducting safe, efficient and effective operation of research or training aircraft. Manage command and control activities, payload integration and operations, robotic operations and EVA operations according to mission objectives including the technical activities and real-time decision-making and problem resolution during mission critical operations.

3.1.4. Payload Integration (PAYLOADINT) [5]

Applies knowledge and practices of management, science and engineering to lifecycle of all payload research experiments. Ability to optimize use of existing systems for accomplishment of science objectives, and to determine

engineering requirements such as payload support hardware definition, design, fabrication, integration and testing, and operating procedures. Includes ability to integrate payloads into vehicles and determine requirements and predict operating impacts between payloads and vehicles. Ability to test and process payloads, and integrate them successfully on-board the vehicle.

3.1.5. Weather Observation and Forecasting (WOBSFR) [6]

Knowledge, capabilities and practices associated with developing or improving techniques for observing or forecasting local weather conditions in a coastal, semi-tropical environment. Specific capabilities include high resolution in-situ or remote sensing of wind, temperature and humidity; mesoscale meteorological modeling; high-resolution measurement of atmospheric electric fields and charge; radar meteorology; theoretical or numerical modeling of free electric charge generation and dissipation in clouds; and related areas. It also includes developing concepts of operation for the application of these technologies to Range operations; identifying and evaluating deficiencies in operational weather support for new or existing requirements; understanding the impact of meteorological variables on Range operations and systems; and knowledge of the application of weather data and technologies to the design of operational systems and procedures.

3.1.6. Integrated Logistics Support (INTLOGSUP) [162]

Knowledge, capabilities, concepts, and methods of strategic logistics planning, ad execution, emphasizing proactive techniques to ensure maximum logistics influence on systems acquisition as well as optimum life-cycle management of acquisition and legacy systems. Capabilities include planning, developing, implementing, and sustaining the Logistics Engineering activities necessary to satisfy support requirements while minimizing life-cycle costs; maintenance planning; manpower and support planning; supply support; support equipment to include test, measurement and diagnostic equipment (TMDE); providing technical data; training and training support; Logistics Support Analysis (LSA) for developed and modified hardware and software interfaces and components down to the piece part level on both a continual and iterative basis; generation of data inputs to the Logistics Management Information (LMI) database.

3.1.7. Program/Project Analysis (PROJANALYS) [147]

Knowledge, capabilities and practices associated with formulating, planning, implementing, tracking and evaluating work and its associated requirements and risks, ranging from one-time projects to program-level work. Critical ability is to develop, analyze, and oversee resources, schedule, and management controls needed by the Program/Project manager to achieve the appropriate balance between resources, schedule, and technical objectives. Includes knowledge associated with finance, budgeting, schedule, configuration management, and project controls.

3.1.8. Technical Management (TECHMMT) [153]

Knowledge, capabilities, and practices of technical formulation, planning, implementing, integration and managing of complex engineering work. This includes special knowledge in field of expertise, technical resources management to meet mission specific technical milestones, and processes associated with mitigating or accepting risk.

3.2. Quality/Safety/Performance Competency Suite

3.2.1. Quality Engineering & Assurance (QEA) [29]

Knowledge, capabilities, and practices associated with the assurance of quality (aeronautic and astronautic) for all phases of the mission life-cycle including design, manufacturing, assembly, testing and operations. Capability for planning, defining, documenting, and executing quality requirements for products, processes, and systems that are suitable to the activity, proportional to the risk, and consistent with established NASA guidance, practices, and standards including NASA workmanship standards, NASA parts standards, Federal Acquisition Requirements (FAR), and NASA

recommended practices for contract quality and supplier assessment. Knowledge of destructive and non-destructive material testing and inspection techniques used to validate product compliance, including related contract data deliverable requirements. Knowledge of ISO 9000 and AS 9100 series of quality standards, as well as the ability to apply these standards for complex or critical items. Ability to assess quality system compliance and effectiveness in accordance with requirements of ISO 9000 and AS 9100 quality standards. Knowledge of inspection, auditing and surveillance methods which can range from a one-time test or inspection of a product, process, or service to periodic in process monitoring of contract performance. Ability to manage, and/or evaluate the results of quality functions (audits, surveys, reports, acceptance data package/test report, etc.) performed by NASA, NASA designated/delegated representatives, and/or third party certification bodies. Ability to continually improve quality through advocacy and dissemination of advanced quality tools, techniques, technology, practices, policy, procedures, and training. Ability to perform quality data analysis and trending, to determine deficiency root cause(s), and to implement effective preventive measures.

3.2.2. Reliability & Maintainability Engineering & Assurance (RMEA) [28]

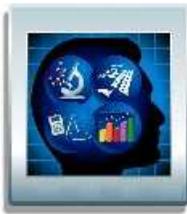

Knowledge, capabilities and practices used to design flight, ground support, and facility systems, equipment and instruments for performing their intended function for a specified interval under stated conditions (reliability) and/or have a defined capability to be restored to operational status following a failure (maintainability). Capabilities include the capacity to: define mission success criteria; define and evaluate compliance with systems/equipment reliability/maintainability requirements, including redundancy requirements and allocations; model systems/equipment from a reliability/maintainability perspective, including system failure logic modeling, physics of failure, and predictions; perform and evaluate quantitative and qualitative analyses and assessments, including failure modes and effects analyses/critical items list, limited life items, calculation of reliability and maintainability performance and importance measures; perform and evaluate statistical analysis, trending, and trade-offs; perform and evaluate maintenance analyses, such as reliability centered maintenance techniques; plan, perform and evaluate laboratory testing and engineering analyses; evaluate system/equipment failures to determine root cause and develop corrective actions to prevent similar failures in the future; integrate reliability/maintainability requirements, activities and results with other related disciplines (competencies) such as Safety Engineering and Assurance, Risk Management, Probabilistic Risk Assessment, Quality Engineering and Assurance, Human Factors, Software Assurance, Acquisition and Contract Management, and Logistics. Also includes availability which can combine the elements of reliability and maintainability in a single parameter.

3.2.3. Risk Management (RISKMMT) [123]

Engineering / Scientific background and knowledge of engineered systems. Knowledge, capabilities, and practices associated with risk management and the risk-informed decision-making process, as applied to engineered systems. Knowledge of Decision Analysis, including formulation, analysis, and use of performance measures in risk tradeoff studies and selection of alternatives. Knowledge of risk management techniques, in particular, risk identification and analysis using both qualitative and quantitative techniques. Ability to apply the principles of Continuous Risk Management (CRM) to the identification, analysis, planning, tracking and control of technical and programmatic risk including mission performance, safety, cost, and schedule. This includes knowledge of fundamental risk management concepts for major procurements that require formal acquisition planning, and ongoing program/project risk management activities.

3.2.4. Safety Engineering and Assurance (SAFENG) [27]

Knowledge of scientific, engineering and management principles for ensuring safety of missions and systems through controlled design, development, operation, and disposal. Includes ability to develop safety policies and to use analytical tools such as hazard analysis, failure modes and effects analysis, fault tree analysis, and probabilistic risk assessment, and

develop technical reports of results, conclusions, and recommendations to support risk-informed decision-making. Develop safety performance measures and apply criteria and techniques such as safety audits, assessments, inspections, trend analysis, precursor analysis, and sampling to monitor safety performance and to identify and eliminate/mitigate hazards and achieve an acceptable level of risk, within the constraints of operational effectiveness and suitability, time, and cost throughout all phases of the system (mission) life cycle.

3.2.4.1. System Safety (SYSSAFETY) [1104]

Engineering / Scientific background and knowledge of engineered systems. Knowledge, capabilities and practices associated with the use of formal approaches to analyze hazards that impact human, environment and mission assets in order to provide decision makers with recommendations on ways to eliminate the hazards or reduce their risk to acceptable levels. Involves the ability to develop safety risk models using qualitative techniques such as System Hazard Analysis and quantitative techniques such as Probabilistic Risk Assessment to proactively and reactively identify the need for risk trade studies concerning resolution of hazards; to formulate risk reduction strategies; and to timely and effectively communicate safety risk insights to decision-makers.

3.2.4.2. Probabilistic Risk Assessment (PROBRISK) [1105]

Knowledge, capabilities and practices associated with the development and application of system risk models to support design engineering, reliability analyses, and risk-informed decision making. This includes the assessment of mission success criteria, the development of accident scenarios using logic techniques, phenomenological failure modeling, the quantification of accident scenarios using probabilistic and statistical analysis techniques, consequence assessment (evaluation of the physical consequences of accident scenarios), uncertainty and risk-trade-off analysis, and risk communication..

3.2.4.3. Trend Analysis (TREND) [1106]

Knowledge, capabilities and practices associated with the identification of trends and patterns in data. Knowledge and demonstrated capability in statistical analysis including both classical and Bayesian statistics. Knowledge and demonstrated capability in using software packages for trend analysis, such as SPLUS, SYSTAT, or SAS. Knowledge and capabilities in data mining techniques and statistical learning approaches. Involves the ability to identify statistically significant time trends, patterns associations, outliers, and periodicities. Involves the capability to interpret the information provided by trends and patterns in terms of their program implications.

3.2.4.4. Precursor Analysis (PRECURSOR) [1107]

Knowledge, capabilities, and practices associated with the identification of forerunners to failure. Knowledge of risk analysis techniques and risk models to be able to infer the risk implications of conditions, events or sequences of events that are precursors to accidents. Knowledge of quantification techniques to assess the probability implications of a precursor event or a precursor sequence events. Involves the screening of data and records to identify potential candidate precursors and assessing the risk implications of the screened events to estimate the severity of the event in terms of the nearness of the event to a failure or accident. Involves the assessment of preventative or mitigative actions to determine their impact on the precursor probability or consequences.

3.2.5. Software Assurance Engineering (SWASSURANCE) [139]

Knowledge, capabilities and practices associated with the planning, organizing, performing, monitoring and directing software assurance activities for software either acquired or developed for all phases of the product lifecycle including product concept, acquisition, contractor selection and oversight, requirements definition, design, implementation, problem reporting, corrective action, verification and validation, testing, operations, maintenance, and retirement.

Software Assurance practices include software product assurance, process assurance, quality, reliability, safety, security, risk management, verification, validation, and independent verification and validation. Additionally, demonstrate knowledge of current software and systems engineering practices, languages, management, planning, standards, procedures, and recommended processes. Assures that process and product standards are appropriate, implemented correctly, followed, and improved.

3.2.6. Configuration Management (CONFIGMMT) [154]

Knowledge of configuration management practices required to define, document, control and manage changes to the functional and physical attributes of system hardware, software, and information as applied to systems life cycle. Ability to control baselines, including identification (requirements, interfaces, and physical and functional attributes of configuration items) and control of changes to baseline. Knowledge of CM status accounting methods to record and report status of baselines. Capability to conduct audits of the overall configuration management processes performance, conduct Physical Configuration Audits, and support Functional Configuration Audits. Knowledge of NASA Program/Project management processes and the ability to plan, conduct, and evaluate the evolving baselines for NASA Programs/Projects in accordance with the NASA configuration management requirements and standards.

3.2.7. Mishap Investigation (MISHAPINV) [149]

NASA employee who understands NASA mishap investigation policy, and requirements, and has the skills to perform all aspects of mishap investigation including preserving, collecting, and impounding evidence, interviewing, conducting analyses, drawing conclusions, generating recommendations, and writing NASA mishap reports.

4. Leadership & Management Knowledge Domain

4.1. Management Competency Suite

4.1.1. Executive Management (EXECMMT) [170]

Knowledge, capabilities and practices associated with leading change, people, and work of an organization. Includes awareness and understanding of relevant strategies and techniques to effectively create a vision for change and engage others in implementing the change process. Ability to apply human capital and leadership strategies to empower teams and develop leadership capabilities in lower level managers. Ability to determine an organization's business direction and vision, and set goals that align with broader Agency objectives and related functional or program plans. Knowledge of methods for integrating work from across functional and organizational boundaries, considering complex cross-functional, cross-center, division, business and geographic implications when approaching problems or issues. Knowledge of how to apply policies and regulations that impact NASA including NASA Strategic Plan, Mission Directorate Roadmaps, President's Management Agenda, Space Act, and GPRA. Ability to assess impact of work performance on NASA's relationships with external customers and stakeholders.

4.1.2. Business Work & Team Management (BUSWORKMMT) [172]

Knowledge, capabilities and practices associated with individuals that must understand and manage both the aspects of functional business operations, as well as management of employees and/or teams. This pseudo competency requires the supervisor or lead to have the following competencies:

- Any business management related competency
- Employee & Team Leadership
- Work Performance Leadership

4.1.3. Project Work & Team Management (PROWORKMMT) [173]

Knowledge, capabilities and practices associated with individuals that must understand and manage both the aspects of managing a project, as well as management of employees and/or teams. This pseudo competency requires the supervisor or lead to have the following competencies:

- Project Management
- Employee & Team Leadership
- Work Performance Leadership

4.1.4. Technical Work & Team Management (TECWORKMMT) [171]

Knowledge, capabilities and practices associated with individuals that must understand and manage both the aspects of technical work, as well as management of employees and/or teams. This pseudo competency requires the supervisor or lead to have the following competencies:

- Technical Management
- Employee & Team Leadership
- Work Performance Leadership

4.2. Professional Development Competency Suite

4.2.1. Program/Project Management (PROJPROGMT) [122]

Knowledge, capabilities and practices associated with formulating, planning, implementing, managing, tracking and evaluating work and its associated requirements and risks, ranging from one-time projects to program-level work. Critical abilities are to define customer and stakeholder needs and constraints, reduce ambiguity in objectives, develop and manage an efficient project organizational structure, and apply system architecture principles to develop and manage technical requirements in order to achieve the appropriate balance between resources, schedule, and technical requirements. Includes knowledge associated with system architecture, finance, budgeting, risk assessment, schedule, configuration management, contract technical management, and project controls.

4.2.2. NASA Leadership Competency (NASALEADER) [140]

Knowledge, capabilities and practices associated with leading and managing change, people, and work of an organization. Includes awareness and understanding of relevant strategies and techniques to effectively create a vision for change and engage others to implement the change process. Knowledge of how to apply human capital and leadership strategies to empower individuals and teams to achieve shared outcomes and develop leadership capabilities in lower level managers. Understanding of range of practices that create an environment that values diversity, promotes inclusion of all employees, and leverages talents of all team members. Develop systems that allow effective assignment, prioritization and monitoring of work. Align work unit performance objectives with organizational objectives and removes obstacles and barriers to organizational and programmatic performance.

4.2.2.1. Employee & Team Leadership (LEADTEAM) [1001]

Knowledge, capabilities and practices associated with communicating business direction, goals and performance, developing and maintaining relationships and alliances, and conducting problem solving for effective decision making. Includes understanding of effective interpersonal and group communication principles and techniques to gather, comprehend and express ideas in an effective manner, and inform and influence others. Includes knowledge

of techniques and approaches to resolve conflict and negotiate effective outcomes. Demonstrates ability to balance short-term needs with long-term priorities and consider complex cross-functional, cross-center, division, business and geographic implications when approaching problems or issues. Knows how to apply appropriate techniques, procedures and policies in the management of workforce to achieve work objectives and maintain effective and positive operational environments.

4.2.2.2. Knowledge & Communication Management (LEADCOMM) [1002]

Understands and applies knowledge management practices, theories and success factors. Possesses knowledge and capability to lead efforts to capture, organize, store and share knowledge from major team, functional community or programmatic efforts. Creates systems that facilitate communication of knowledge within NASA in order to leverage best practices, and technical know how or advancements within the Agency. Possesses knowledge of information technologies available at NASA and selects and uses those appropriately for managing work and develops strategies to integrate new technology into the workplace. Understands and applies principles of information security in relation to data publishing, technology transfer and release of information.

4.2.2.3. Work Performance Leadership (LEADWORK) [1003]

Knowledge, capabilities and practices associated with determining an organization's business direction and vision, and setting goals that align with broader Agency objectives and related functional or program plans. Knowledge of how to apply policies and regulations that impact NASA including NASA Strategic Plan, President's Management Agenda, Space Act, and GPRA. Ability to assess impact of work performance on NASA's relationship with external customers and stakeholders. Ability to develop systems that facilitate the effective assignment of work and measurement of results. Knowledge of methods for integrating work from across functional and organizational boundaries.

4.2.2.4. International Relations (LEADGLOBAL) [1004]

Knowledge, capabilities and practices associated with forming and maintaining cross-cultural relationships and international partnerships and alliances. Understanding of the rules and policies that regulate or dictate international partnerships and how to work within those guidelines in order to accomplish objectives and sustain ongoing relationships.

5. Science Knowledge Domain

5.1. Space Sciences Competency Suite

5.1.1. Astromaterials, Collections, Curation & Analysis (ASTROMATER) [55]

Apply knowledge of foreign materials, and planetary sciences to the collection of materials from foreign planets, and developing and using appropriate processes for handling and curating them. Includes knowledge and skill in processing the materials to protect Earth system from contamination.

5.1.2. Astrobiology (ASTROBIO) [54]

Apply knowledge of biology, chemistry, physics, and other sciences in interdisciplinary experimental, observational, theoretical, and modeling studies of the origin, early development, and transmission of life in or on astronomical bodies and media, including the Earth and its atmosphere, and to determine how and where life arose and evolved on Earth and elsewhere, with due regard to environmental conditions and limits.

5.1.3. Astronomy & Astrophysics (ASTRONOMY) [52]

Knowledge of the fundamental processes of radiation and dynamics for the study of the structure and composition of the Solar System, other planetary systems, stars and stellar systems, galaxies, and the structure and evolution of matter and cosmology. Use a variety of observational methods, data analysis techniques and theoretical models to characterize the physical and dynamical states of celestial objects, determine formation history and predict future evolution. Use physics and chemistry knowledge to conduct observational, experimental and theoretical studies and modeling of stars, nebulae, galaxies, and systems of stars and galaxies, and of circumstellar, interstellar and intergalactic media, particles, molecules and radiation fields, in all electromagnetic wavelength ranges. Includes study of specialty areas such as Gamma Ray & X-Ray Astronomy and Cosmic Ray Astrophysics, in which electromagnetic waves, x-ray emissions and cosmic ray particles provide data for examining the content, structure, origin and evolution of space elements.

5.1.4. Earth Atmosphere (EARTHATM) [44]

Knowledge of the fundamental processes of radiation, chemistry and dynamics in the study of the structure and composition of the Earth's atmosphere. Conceive and implement a variety of observational methods, data analysis techniques, and theoretical models to characterize the state of the atmosphere, detect variability and explain the responsible forcing mechanisms, and predict the future state of the atmosphere. Able to develop and implement missions to conduct atmospheric research, and contribute to the development of atmospheric instrument and sensor development. Includes subspecialty knowledge in areas such as Radiation and Climate, Stratospheric & Tropospheric Chemistry.

5.1.5. Planetary Atmospheres (PLANETATM) [163]

Knowledge of the fundamental processes of radiation, chemistry and dynamics in the study of the structure and composition of the lower and upper atmosphere of the planets and the origin and evolution of planetary atmospheres. Conceive and implement a variety of observational methods to characterize the state of the atmospheres of the planets-past and present, detect variability and explain the responsible forcing mechanisms, and predict the future evolution and state of planetary atmospheres instrument and sensor development. Includes subspecialty knowledge in areas such as Radiation and Climate, Atmospheric Chemistry and Dynamics, Atmosphere-Surface Interactions, Celestial Mechanics, Solar-Planetary Relationships, Planetary Magnetic Fields and Magnetospheres.

5.1.6. Planetary Science (PLANETSCI) [53]

Knowledge of space science applied to conducting experimental, observational, and theoretical studies and modeling of planets, planetary satellites, asteroids, comets, meteoroids, and other objects, media, and particles in the solar system, in order to determine their composition and properties in such areas as atmospheres, magnetospheres, lithospheres, cryospheres, and interiors.

5.1.7. Space Physics (SPACEPHY) [51]

Uses knowledge to conduct experimental, theoretical, and/or applied physics and modeling relating to matter, radiation, and their interactions, and ranging from elementary particles and fields to atomic, and nuclear physics, condensed matter physics, optical, gravitational and quantum mechanical, hydrodynamical and magnetohydrodynamical physics and General Relativity, and as applied to the nature and structure of the universe and to chemical, biological, and geophysical systems. Includes specialty areas such as solar physics, involving use of observational and experimental studies to model the Sun and its magnetic activity, characteristics, composition and influence on the Earth and other planetary bodies, as well as space plasma physics, focused on near-Earth environments such as the magnetosphere and its properties.

5.2. Earth Sciences Competency Suite

5.2.1. Biology and Biogeochemistry of Ecosystems (BBECO) [46]

Apply knowledge of biology, biogeochemistry of ecosystems and the global carbon cycle to research, understand and predict how terrestrial and marine ecosystems change. Research ecosystems as they are affected by human activity, and as they change due to their own intrinsic biological dynamics, and as they respond to climatic variations and, in turn, affect climate. Emphasis is on an understanding of the processes of the Earth system that affect its capacity for biological productivity, explain the role of the biosphere in Earth system function, and promote proactive ecological stewardship. Ability to understand, study and properly document changes in land cover and land use.

5.2.2. Earth Science Applications Research (EARSCIRES) [49]

Use knowledge of Earth systems and measurement technologies for designing research into Earth Science disciplines that have the objective of improving the quality of life on Earth and the longevity of the planet. Apply research to such subjects as resource and disaster management, environmental assessment, human health and safety, food and fiber, infrastructure planning, and environmental quality.

5.2.3. Earth System Modeling (EARSYMODEL) [50]

Apply understanding of Earth systems to consolidation of scientific findings into integrated representations of atmosphere, ocean, ice land and biosphere systems, with the ability to predict future system trends and evolution of chemical and biological components.

5.2.4. Geophysical/Geologic Science (GEOSCI) [45]

Knowledge of a wide range of disciplines related to the earth's composition, its fluid envelopes, and its position in space. Apply concepts and methods in mathematics, physics, chemistry, and biology to the problems of the atmosphere, the oceans, the solid earth, and the evolution of the planet. Involves ability to conduct far-reaching studies of the origin of the earth and solar system.

5.2.5. Geospatial Science and Technologies (GEOSPATIAL) [88]

Applies knowledge and practices of geospatial science and has the ability to utilize and/or develop the tools for acquiring, storing, analyzing, and outputting data in multiple dimensions, as referenced to the earth by some type of real-world coordinate system (eg, a map projection). The ability to reference a geographic location as an important component in the analyses of effects or trends in biological and physical socio-economic resources. Understanding of and ability to use a variety of technology tools, such as geographic information systems (GIS), remote sensing, thematic mapping, image processing, satellite positioning systems such as the Global Positioning System (GPS), and telemetry.

5.2.6. Hydrological Science (HYDROSCI) [47]

Knowledge of the scientific study of waters of the earth, especially with relation to the effects of precipitation and evaporation upon the occurrence and character of water in streams, lakes and on or below the land surface. Includes understanding of the hydrologic cycle from precipitation to evaporation or return of the water to the seas, and application of findings to predict rates and amounts of runoff in rivers, assess required spillway and reservoir capacities, determine soil-water-plant relationships in agriculture and manage water supplies.

5.2.7. Oceanographic Science (OCEANSCI) [48]

Research into the composition, activities, processes and patterns in the oceans and ocean ice to increase understanding of how the marine environment interacts with the rest of the planet. Includes research on glaciers and ice sheets. Use a variety of data collection methods to collect information about the ocean and mathematically describe and predict ocean processes. Includes ability to translate data into information useful in the understanding and interpretation of the oceans themselves and their connection to other earth systems.

5.2.8. Climate Change and Variability (CLIMATE) [164]

Applies an integrated and cross discipline approach to understanding, assessing, and predicting the Earth's complex climate system. This capability draws from the other Earth Sciences related competencies to provide observations at the high accuracy required to monitor climate change, to evaluate its component processes at climate relevant time and space scales, and to enable prediction of future climate change. This research capability includes the ability to estimate the uncertainty of future climate predictions, to support impact assessments, and to develop new climate observational and modeling requirements, methods, and capabilities.

5.3. Physical Sciences Competency Suite

5.3.1. Fundamental Physics (FUNPHYSICS) [42]

Knowledge, capabilities and practices associated with research and application of electromagnetism, continuum and classical mechanics, quantum mechanics, and thermodynamics. May also include studies in materials, cryogenics, acoustics, and electromagnetic fields ranging from DC to gamma-ray. It also includes the development of sensors necessary to carry out these studies. Involves ability to conduct microgravitational research designed to answer basic questions about the nature and structure of the universe and its chemical, biological and geophysical systems.

5.3.2. Icing Physics (ICEPHYSICS) [107]

Knowledge, capabilities and practices associated with researching and understanding icing physics analysis and testing, atmospheric science, and ice sensing and protection methods.

5.3.3. Nanoscience (TINYSCI) [56]

Knowledge, capability and practices to study and research extremely small materials in such areas as their structure, shape how they act, and how their properties change as their size changes.

5.3.4. Fluid Physics (FLUIDPHY) [43]

Employ knowledge of the motion of fluids and the effects of such motion, to the understanding, control and improvement of industrial and natural processes. Areas of research include microgravitational study of complex fluids, multiphase and phase change, fluid dynamics and instabilities, and interfacial phenomena.

5.3.5. Advanced Materials and Processing Science (ADVMATSCI) [65]

Research knowledge, capabilities and practices associated with the synthesis, structure, processing and properties of materials, from atomic to macroscopic, including the behavior and mechanisms by which types of materials react to stresses, processes and environments, particularly the harsh environment of space. Includes experimental research into materials such as electronic materials, glasses and ceramics, metals and alloys, lubrication materials, sealants, foams, composites and polymers for improving current and enabling future aerospace applications. Includes computational research to develop validated structure-property relationship models for all classes of materials. Includes processing, testing, and characterizing these materials to further understanding of how they can be combined or treated to improve the quality and reliability of systems, control defects and prevent contamination of operating systems or components.

5.4. Biological Sciences Competency Suite

5.4.1. Bioethics (BIOETHICS) [156]

Knowledge and experience in interpreting and implementing Federal and Agency regulations and guidelines for the protection of human and animal research subjects. Knowledge and expertise in the ethical principles that guide biomedical research. The ability to apply regulatory knowledge to implement appropriate and comprehension review mechanisms for the use of human and animal subjects in research. The ability to apply the knowledge of ethical theory and thought to guide Agency biomedical research and clinical medical policy development and decision-making.

5.4.1.1. Biomedical and Research Clinical Ethics (BRCE) [1064]

Professional skills and knowledge of bioethics applied to a range of bioethical issues surrounding biomedical research, particularly those associated with the use of human and animal subjects in research. Broad and detailed understanding and knowledge of the evolution and development of ethical thought related to biomedical research and medical practice, to guide the development of Agency policy, and provision of expert opinion on relevant ethical issues to inform Agency decision-making.

5.4.1.2. Research Subject Protection Regulation (RSPR) [1065]

Knowledge and a thorough understanding of the Federal and Agency regulatory framework, which governs the use of human and animal subjects in research. Knowledge of the implementation of all regulatory requirements and all applicable laws governing research subject protection. Detailed understanding of the procedural requirements for the conduct of human subjects Institutional Review Boards and Institutional Animal Care and Use Committees, and knowledge of the implementation of such Agency Boards and Committees.

5.4.2. Biomedical Research (BIOMEDRES) [34]

Involves the capability to research, investigate and characterize the effects of space flight and exposure to microgravity, radiation, and other stresses on physiological functions (e.g., musculoskeletal, cardiovascular, etc.). In-depth understanding of the human body, its physical and chemical make-up and the associated technology and methods to examine the effects of various environments and stresses. Ability to understand the underlying physiological, behavioral and psychological mechanisms and performance aspects responsible for biomedical and behavioral changes in humans and animals during spaceflight and apply this information to conduct operational and clinical research to develop, and validate countermeasures that will ensure the health, safety and performance of flight crews involved during launches, landings, and while in space.

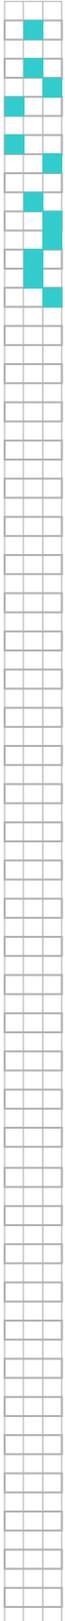

5.4.3. Cell & Molecular Biology (CELLBIO) [31]

Knowledge of and ability to conduct research on basic cellular function and properties such as gene regulation and expression or mechanoreception, that may be directly or indirectly impacted by altered gravitational force and other space-related effects. Includes biotechnology, tissue engineering, study of the dynamics of cell behavior and interactions and differentiation in cellular systems within and across organisms under a variety of environmental conditions, such as the physiological changes seen in whole animals in response to the space environment, and development of biosentinels.

5.4.4. Developmental Biology (DEVELOPBIO) [32]

Knowledge of and ability to conduct research on the processes of development, differentiation, and growth in animals and plants at the molecular, cellular, and genetic levels.

6. Developmental Competencies and Skills

Overview

In the NASA Competency Management System (CMS), professional occupational areas will describe the expertise used in their professional community in terms of competencies. A competency defines the knowledge, skills, and abilities that an individual must have in order to demonstrate that they possess that expertise.

As described at the beginning of this document, some competencies are used primarily in the workforce planning process, some competencies will be used for employee developmental purposes, and some competencies are used for both. To help clarify the intended purposes, CMS makes the following distinctions:

- I. **Workforce/Integrated Competencies** – Chapter 1-5 describes the set of competencies that are used for both workforce planning and employee development purposes.
- II. **Developmental Competencies** – This chapter describes the set of competencies defined by the professional communities that are targeted towards use for employee developmental purposes. These competencies will break-out the professional expertise, into lower levels of details. They are usually based on a competency model that describes all of the detailed expertise that will comprise a professional occupation.
- III. **Skills** – This chapter will also include descriptions of specific skills. Skills represent a specific capability and are usually a subset of a developmental competency. Note, the skills listed in this chapter are not intended to represent an all inclusive listing of all the skills used by the professional community. Selected skills will be defined by the professional community as needed, to target specific areas of expertise that need to be measured and monitored at a lower level of detail.

Therefore, only workforce/integrated competencies will be used in job positions and employee portfolios. Developmental competencies and skills will be used for competency assessments performed by a specific professional community. Chapter 7 defines selected professional communities and their competency models.

6.1. Acquisition & Contract Management

6.1.1. Procurement Strategy Development/Understanding Sourcing (CM_ACM1) [2001]

Ability to advise customers on their acquisition-related roles and all documentation and information required of them. Ability to guide customers in the development and implementation of strategies needed to assure that goods and services are available when needed to meet mission requirements. Ability to identify possible acquisition sources and advise customers on competitive options based on business strategies, market environments, acquisition goals, and FAR requirements; and to determine whether to limit competition to socioeconomic concerns. Ability to identify and encourage the use of opportunities for small business and other preference programs.

6.1.2. Defining Procurement Requirements (CM_ACM2) [2002]

Ability to determine the most appropriate method of acquisition for each procurement request as it relates to the technical and business requirements, as well as the organizational environment in which the acquisition will occur. Ability to ascertain that proposed evaluation factors reflect proposal performance requirements and are meaningful for success.

6.1.3. Defining Contractual Relationships/Performance Based Acquisition (CM_ACM3) [2003]

Ability to identify and select the most appropriate contractual terms, arrangements, and contract types; for example, in pricing, financing, and payment methods. Ability to determine if performance based acquisition is the appropriate

strategy and assists in the development of a performance work statement or a statement of objectives including performance standards or incentives that will effectively measure contractor results.

6.1.4. Solicitation of Offers (CM_ACM4) [2004]

Ability to manage the solicitation process and adhere to regulations, policies and procedures, including building an appropriate solicitation and publicizing the procurement, responding to inquiries, and amending or canceling the solicitation when appropriate.

6.1.5. Proposal Analysis and Evaluation (CM_ACM5) [2005]

Ability to receive, handle, and evaluate bids/quotations and proposals adhering to proper regulations, policies and procedures and to assure that offerors meet all solicitation requirements. Ability to manage and clearly document the evaluation of technical, cost/price, and business proposal data incorporating past performance findings, audit recommendations, status of contractor business systems, and Cost Accounting Standards Disclosure into the evaluation process. Ability to ensure evaluation adheres to solicitation evaluation factors.

a) SKILL : Cost/price Proposal Evaluation

Ability to identify the key factors and considerations in conducting a cost/price evaluation. Ability to conduct a basis of estimate analysis and a cost/price analysis to arrive at government pre-negotiation position. Ability to obtain and use probably cost and cost realism in a competitive environment.

6.1.6. Contract Negotiation (CM_ACM6) [2006]

Ability to determine negotiation objectives, issues, and strategies. Ability to facilitate discussions and conduct negotiations to achieve a fair and reasonable price and settle all negotiation issues. Ability to clearly and completely document the elements of the negotiated agreement.

6.1.7. Contract Award (CM_ACM7) [2007]

Ability to handle all aspects of contract award including preparation and distribution of documents, notifications and debriefing unsuccessful offerors. Ability to resolve complaints, concerns, and formal protests per FAR and Agency guidance.

6.1.8. Contract Administration/Managing Contract Requirements (CM_ACM8) [2008]

Ability to work with multi-disciplined teams, COTRs and other individuals in the contract administration process, to administer contract requirements and manage vendor relationships and contract documentation. Ability to modify and monitor contract and subcontract performance and take any necessary action to apply remedies to protect the rights of the Government. Ability to investigate, analyze, and manage disputes and negotiate resolutions.

a) SKILL : Incentive Contracting

Ability to determine the balance between government and industry goals and objectives in developing an effective incentive strategy that delivers value to both parties. Ability to construct and administer a successful business relationship with the contractor that effectively motivates and incentivizes them to deliver what the government needs on time and within budget.

6.1.9. Performance and Financial Management/Closeout (CM_ACM9) [2009]

Ability to facilitate the evaluation of contractor performance for technical, reporting, scheduling, deliverables and cost requirements. Ability to analyze financial management reports and manage all financial aspects of contract administration including cost/pricing remedies, authorizing payments. Ability to follow-up on audit results. Ability to perform required contract closeout activities.

6.1.10. Personal Effectiveness Skills

a) **SKILL** : Problem Solving and Customer Support

Identify and analyze problems; provide acquisition related advice and assistance to customers; respond to inquiries; exhibit leadership and creative thinking to solve complex and significant problems in a collaborative fashion; generate and evaluate alternatives and put forth recommended solutions that are based on business strategies/goals, and compliant with regulatory and/or statutory requirements; escalate problems/issues for resolution when necessary. Accomplish acquisitions and tasks while treating others courteously, fairly and equitably. Establishes and fosters effective relationships.

b) **SKILL** : Decision Making

Makes sound business decisions that are within regulatory and/or statutory guidelines and are consistent with acquisition, program/project, and/or NASA organizational objectives. Ability to take appropriate action and make difficult decisions when there is little or no established regulation and policy..

c) **SKILL** : Communication

Ability to relay procurement decisions, contractual approaches, findings, recommendations, and administrative information in a clear and concise manner to a variety of audiences. Ability to listen actively and effectively; request clarification as needed; seek, gather, and organize information from co-workers and customers; speak and write clearly, convincingly, precisely, and appropriately to the task and/or audience. Ability to use effective communication skills to be persuasive and influence decisions.

d) **SKILL** : Flexibility, and Adaptability and Self Direction

Realistically assesses own strengths, weaknesses, and impact on others. Reflectively and consistently considers new ideas and processes; readily adapts to new information or procedures, changed conditions or unexpected obstacles and shifting workload demands to work persistently toward objectives; demonstrates an ability to work concurrently on multiple acquisitions. Manages own time effectively.

e) **SKILL** : Technology Utilization

Effectively utilizes IT applications and devices (e.g. FPDS, PRISM/CMM, e-mail, wireless devices, etc.) within the procurement and/or NASA environment to successfully accomplish work projects or tasks including data and information gathering and analysis.

f) **SKILL** : Teaming Skills

Contribute to achievement of program goals by working interdependently; determining and responding positively to co-worker or customer needs; sharing knowledge and insights with co-workers; inform all appropriate parties regarding acquisition/task progress, resource needs, projections and limitations. Respond to and/or resolve conflict in a balanced way. Respond to acquisition or project team requests in a timely manner; solicit additional information from all members of the acquisition or project team as necessary to complete tasks in an efficient and effective manner.

6.2. Human Resource

- a) **SKILL - Interpersonal Skills**
Shows understanding, courtesy, tact, empathy, concern; develops and maintains relationships; may deal with people who are difficult, hostile, distressed; relates well to people from varied backgrounds and situations; is sensitive to individual differences
- b) **SKILL - Teamwork**
Encourages and facilitates cooperation, pride, trust, and group identity; fosters commitment and team spirit; works with others to achieve goals.
- c) **SKILL - Customer Service**
Works with customers to assess needs, provide assistance, resolve problems, satisfy expectations, knows products and services; is committed to providing quality products and services.
- d) **SKILL - Client Engagement! Management**
Knowledge of the principles of organizational development and change management theories, and their applications.
- e) **SKILL - Knowledge of the Agency's Business**
Knows the organization's mission and functions, and how its social, political, and technological systems work and operates effectively within them; this includes the programs, policies, procedures, rules, and regulations of the organization.

6.3. Project Management

6.3.1. Project Conceptualization (CM_PROJ1) [2101]

Development of a concept, overall plan, and proposal for a successful NASA project. Includes preliminary definition of; program/project plan content; acquisition strategy and plans; risk management plan; development of a realistic cost estimate and a sound rationale for consistency with the NASA vision, strategies, and objectives.

6.3.1.1. Project Proposal (CM_PROJ1.1) [2102]

Conceptualizing, analyzing, and defining program/project plans and concepts and using technical expertise to write, manage, and submit winning proposals. Also involves developing functional, physical, and operational architectures including life cycle costing.

6.3.1.2. Requirements Development and Management (CM_PROJ1.2) [2103]

Developing project requirements using functional analysis, decomposition, and allocation; finalizing project requirements into the baseline; and managing project requirements so that changes are minimal. Defining, developing, verifying, reviewing and managing changes to program/project requirements.

6.3.1.3. Acquisition Management (CM_PROJ1.3) [2104]

Developing, implementing, and monitoring acquisition strategies, procurement processes, contract activities, and approval requirements to support flight hardware/software or other project requirements

6.3.1.4. Project Planning (CM_PROJ1.4) [2105]

Developing effective project management plans and integration of project elements for small, moderate, and complex projects including scope definition, schedule and resource estimation and allocation for all project phase activities from concept to operation and disposal..

6.3.1.5. Cost-Estimating (CM_PROJ1.5) [2106]

Developing credible cost estimates to support a variety of studies, affordability analyses, strategic planning, capital investment decision-making, and budget preparation during project planning. Also, providing information for independent assessments as required.

6.3.1.6. Risk Management (CM_PROJ1.6) [2107]

Project Proposal: Identifying and analyzing risk and its impact; developing and implementing strategies for risk mitigation; tracking risk, and implementing continuous risk management plans. Also involves communicating risk information to all project/ program levels.

6.3.2. Resource Management (CM_PROJ2) [2108]

Overall planning, allocation, and management of program / project resources. Includes advocacy; budget and operating plan development and management; allocation of financial, facility and other resources; tracking and control of contractor performance using Earned Value Management or comparable approaches..

6.3.2.1. Budget and Full Cost Management (CM_PROJ2.1) [2109]

Executing NASA and Center budgeting processes for annual (PPBE) and life cycle budget projections ensuring consistency between resource availability and project resource needs, including staffing, facilities, equipment, and budget, and EVM..

6.3.2.2. Capital Management (CM_PROJ2.2) [2110]

Allocating, tracking, and managing funding and other capital resources within a project element, project or program.

6.3.3. Project Implementation (CM_PROJ3) [2111]

The overall process of project initiation and implementation, including delegation of systems engineering responsibilities to the technical team (*see SE competencies*), penetration and insight of all contractor activities, evaluation of contractor performance, control of contract changes, and determination, and approval of contract award fees throughout the design, fabrication, assembly, integration, verification, validation, transition, and operational phases of the project lifecycle.

6.3.3.1. Systems Engineering (CM_PROJ3.1) [2112]

See Systems Engineering Competencies later in this document.

6.3.3.2. Contract Management (CM_PROJ3.2) [2113]

Performing acquisition management and monitoring contractor activities to ensure products and services are delivered on time, at projected costs, and meet all contract requirements. Also involves performing variance reporting and change control functions.

6.3.4. Project Closeout (CM_PROJ4) [2114]

Overall planning and management of project closeout activities, based on assessment of project completion, political and other pertinent factors and stakeholder agreements..

6.3.4.1. Stakeholder Management (CM_PROJ4.1) [2115]

Identifying, soliciting, and executing of planning interrelationships with those individuals and organizations that are actively involved in the project, exert influence over the project and its results, or whose interests may be positively or negatively affected as a result of project execution or project completion..

6.3.4.2. Technology Transfer and Commercialization (CM_PROJ4.2) [2116]

Evaluating the feasibility, development, progression, readiness, cost, risk, and benefits of new technologies so they can be developed and transferred efficiently and effectively to project stakeholders or for possible commercialization.

6.3.5. PROGRAM CONTROL AND EVALUATION (CM_PROJ5) [2117]

Process for controlling the final outcome of the program / project including tracking the performance of all significant contractors, vendors, and other involved entities. Requires penetration/insight of contractors' status and performance, allocation of resources, management of mitigation efforts, exercise of de-scope options when required and leading work-around options. Also includes management of the continuum of internal and external project reviews.

6.3.5.1. Tracking/Trending of Project Performance (CM_PROJ5.1) [2118]

Monitoring and evaluating performance metrics, project risks, and earned value data to analyze, assess and report program/project status and technical performance..

6.3.5.2. Project Control (CM_PROJ5.2) [2119]

Performing activities to control cost, schedule, and content and configuration to assure the project's performance is within approved baseline and to address performance variances.

6.3.5.3. Project Review and Evaluation (CM_PROJ5.3) [2120]

Planning, conducting and managing internal and external project programmatic reviews that include using metrics to monitor and track the status of the project.

6.4. System Engineering

6.4.1. SYSTEM DESIGN (cmSYSENG1) [2121]

System design includes developing stakeholder expectations, defining technical requirements, performing logical decomposition, and defining design solutions to result in a validated set of requirements and a validated design solution that satisfies a set of stakeholder expectations.

6.4.1.1. Stakeholder Expectation Definition (cmSYSENG1.1) [2122]

Elicitation and definition of use cases, scenarios, operational concepts, and stakeholder expectations. This includes identification of the stakeholders, establishing support strategies, establishing a set of Measures of Effectiveness (MOEs), validating stakeholder expectation statements, and obtaining commitments from the customer and other stakeholders.

6.4.1.2. Technical Requirements Definition (cmSYSENG1.2) [2123]

Transformation of the baselined stakeholder expectations into unique, quantitative, and measurable technical requirements expressed as "shall" statements that can be used for defining the design solution. This includes analyzing the scope of the technical effort, defining constraints affecting the designs, defining functional and

behavioral expectations in technical terms, defining the performance requirements, validating the resulting technical requirement statements, defining the Measures of Performance (MOPs) for each MOE, and defining appropriate Technical Performance Measures (TPMs) by which technical progress will be assessed.

6.4.1.3. Logical Decomposition (cmSYSENG1.3) [2124]

Transformation of the defined set of technical requirements into a set of logical decomposition models and their associated set of derived technical requirements for input to the design solution efforts. This includes allocation of requirements, resolution of conflicts between derived requirements, and validation of the derived technical requirements.

6.4.1.4. Design Solution Definition (cmSYSENG1.4) [2125]

Translation of the decomposition models and derived requirements into alternative solutions, then analysis of each alternative and selection of a preferred alternative that is fully defined to satisfy the technical requirements. This includes development of a set of 'make-to,' 'buy-to,' 'reuse-to,' or set of 'assemble and integrate-to' specified requirements, interface specifications, requirements for enabling products, a product verification plan, and a product validation plan.

6.4.2. PRODUCT REALIZATION (cmSYSENG2) [2126]

The product realization results in the delivery of the completed system of interest that meets the design specifications and stakeholder expectations. This requires products to be produced, acquired, reused or coded; integrated into higher level assemblies; verified against design specifications; validated against stakeholder expectations; and transitioned to the next level of the system.

6.4.2.1. Product Implementation (cmSYSENG2.1) [2127]

Generation of a specific product through buying, making, or reusing so as to satisfy the design solution definition specified requirements. This includes preparing the implementation strategy, review of vendor technical information, inspection of delivered, built, or reused products, and preparation of product support documentation for integration.

6.4.2.2. Product Integration (cmSYSENG2.2) [2128]

Assembly and integration of lower-level validated end products so as to satisfy the design solution definition requirements. This includes preparing the integration plans and procedures, obtaining products to integrate, confirmation that the products are ready for integration, preparation of the integration environment, and preparation of product support documentation.

6.4.2.3. Product Verification (cmSYSENG2.3) [2129]

Demonstration that the end product generated from implementation or integration conforms to its design solution definition requirements. This includes preparation for verification efforts, analyzing the outcomes of verification (including identifying anomalies and establishing recommended corrective actions), and preparing a product verification report providing the evidence of product conformance with the applicable design solution definition requirements.

6.4.2.4. Product Validation (cmSYSENG2.4) [2130]

Confirmation that a verified end product satisfies its intended use when placed in its intended environment and to assurance that any anomalies discovered during validation are appropriately resolved prior to product transition. This includes preparing to conduct validation, analyzing the results of validation (including identifying anomalies and establishing recommended corrective actions), and preparing a product validation report providing the evidence of product conformance with the stakeholder expectations baseline.

6.4.2.5. Product Transition (cmSYSENG2.5) [2131]

Transition of the verified and validated product to the next higher-level customer. This includes preparing to conduct product transition, evaluating the product, personnel, and enabling product readiness for product transition, preparing sites, and generating required documentation to accompany the product.

6.4.3. TECHNICAL MANAGEMENT (cmSYSENG3) [2132]

Management of the technical activities during the life cycle of the project includes technical planning, requirements management, interface management, technical risk management, configuration management, technical data management, technical assessment, and decision analysis.

6.4.3.1. Technical Planning (cmSYSENG3.1) [2133]

The planning for the application and management of each common technical process, as well as the identification, definition, and planning of the technical effort necessary to meet project objectives. This includes preparing or updating a planning strategy for each of the technical processes, determining deliverable work products from technical efforts, determining technical reporting requirements, determining entry and success criteria for technical reviews, determining product and process measures to be used, determining critical technical events, determining data management approach, determining technical risks to be addressed in the planning effort, determining tools and engineering methods to be employed, determining the approach to acquire and maintain technical expertise needed, preparing the System Engineering Management Plan (SEMP) and other technical plans, obtaining stakeholder commitments to the technical plans, and issuing authorized technical work directives to implement the technical work.

6.4.3.2. Requirements Management (cmSYSENG3.2) [2134]

Management of the technical requirements, including providing bidirectional traceability and managing changes to establish requirement baselines over the lifecycle of the system products. This includes preparing or updating a strategy for requirements management, selecting an appropriate requirements management tool, training technical team members in established requirement management procedures, conducting expectation and requirements traceability, managing expectation and requirement changes, and communicating expectation and requirement change information.

6.4.3.3. Interface Management (cmSYSENG3.3) [2135]

Establishment and use of formal interface management to maintain interface definition, details, and compliance among the end products and enabling products. This includes preparing interface management procedures, identification of interfaces, maintaining interface documentation, disseminating interface information, and conducting interface control.

6.4.3.4. Technical Risk Management (cmSYSENG3.4) [2136]

Examination on a continuing basis the risks of technical deviations from the plans and identifying potential technical problems before they occur so that risk-handling activities can be planned and invoked as needed across the life of the product or project to mitigate impacts on meeting technical objectives. This includes developing the strategy for technical risk management, identification of technical risks, conducting technical risk assessment, preparing for technical risk mitigation, monitoring the status of each technical risk, and implementing technical risk mitigation and contingency action plans when applicable thresholds have been triggered.

6.4.3.5. Configuration Management (cmSYSENG3.5) [2137]

The process of identifying the configuration of the product at various points in time, systematically controlling changes to the configuration of the product, maintaining the integrity and traceability of the configuration of the product, and preserving the records of the product configuration throughout its life cycle, disposing them in

accordance with NPR1441.1 NASA Records Retention Schedules. This includes establishing configuration management strategies and policies, identifying baselines to be under configuration control, maintaining the status of configuration documentation, and conduct of configuration audits.

6.4.3.6. Technical Data Management (cmSYSENG3.6) [2138]

Identifying and controlling data requirements, acquiring, accessing and distributing data needed to develop, manage, operate, and support system products, manage and dispose data as records, analyze data use; obtain technical data feedback for managing the contracted technical efforts; and assess the collection of appropriate technical data and information. This includes establishing technical data management strategies and policies, maintaining stored technical data.

6.4.3.7. Technical Assessment (cmSYSENG3.7) [2139]

Monitor progress of the technical effort and provide stats information for support of the system design, product realization, and technical management efforts. This includes developing technical assessment strategies and policies, assessing technical work productivity, assessing product quality, and conducting technical reviews.

6.4.3.8. Technical Decision Analysis (cmSYSENG3.8) [2140]

Evaluation of technical decision issues, technical alternatives, and their uncertainties to support decision making. This is done throughout technical management, system design, and product realization to evaluate the impact of decisions on performance, cost, schedule, and technical risk. This includes establishing guidelines for determining which technical issues are subject to formal analysis processes, defining the criteria for evaluating alternative solutions, identifying alternative solutions to address decision issues, selecting evaluation methods, selecting recommended solutions, and reporting the results and findings with recommendations, impacts, and corrective actions.

6.5. Project Management & System Engineering Common Developmental Competencies

6.5.1. NASA Internal And External Environments (cmPMCOM1) [2150]

Aligning activities with Agency vision, mission, objectives, goals and plans, and center environment; structuring activities to comply with relevant Agency and Center processes and guidelines; understanding and operating within the overall political, budgetary, cultural, technical, programmatic, and strategic environment in which the project must operate and succeed, including legal implications of NASA international agreements, standards, policies and procedures.

6.5.1.1. Agency Structure, Mission, and Internal Goals (cmPMCOM1.1) [2151]

Understanding and successfully adapting work approach and style to NASA's functional, social, cultural, and political structure and interrelationships to achieve Agency, Mission, Directorate, Center, program and project goals. Includes aligning activities with Agency vision, mission, objectives, goals and plans.

6.5.1.2. NASA Procedures and Guidelines (cmPMCOM1.2) [2152]

Structuring activities to comply with relevant Agency and Center processes and guidelines, including NPR7120.5 and NPR7123.1.

6.5.1.3. External Relationships (cmPMCOM1.3) [2153]

Maintaining cognizance of the policies and procedures of other organizations by participating in professional societies/organizations, contributing to professional development activities, researching best practices from external

sources such as industry standards, procedures, and regulations and Universities, and developing international partnerships and agreements, where applicable, complying with ITAR and as well as international agreements and standards.

6.5.2. Human Capital Management (cmPMCOM2) [2154]

All elements of project team personnel management including identifying, recruiting, selecting, managing, and evaluating the team members to achieve a coherent, efficient, and effective project team. Includes vigorous open communications, decision-making processes, and working relationships.

6.5.2.1. Staffing and Performance (cmPMCOM2.1) [2155]

All elements of personnel management including, identifying, recruiting, selecting, managing, and evaluating the team members to achieve a coherent, efficient, and effective team. Includes vigorous open communications.

6.5.2.2. Team Dynamics and Management (cmPMCOM2.2) [2156]

Managing the team aspects of the workforce. This requires: working cooperatively with diverse team members; designing, facilitating, and managing team processes; developing and implementing strategies to promote team morale and productivity; motivating and rewarding team members' performance; managing relationships among team members, customers, stakeholders and partners; and facilitating brainstorming sessions, conflict resolution, negotiation and problem solving, communication, collaboration, integration and team meetings.

6.5.3. Security, Safety And Mission Assurance (cmPMCOM3) [2157]

Activities associated with assuring the security of sensitive information and systems, the safety of personnel and equipment, and success of the project. Includes: identification of IT security requirements; development and implementation of an IT security plan; planning and management of system safety; planning and management of safety and mission assurance requirements and plans and reviews; environmental impact statements; hazards analyses, elimination, and mitigation; mishap investigations; failure review boards; the flight safety review process; safety, mission assurance, and risk management plans.

6.5.3.1. Security (cmPMCOM3.1) [2158]

Assuring that all proprietary, classified and privileged information is protected from unauthorized use and dissemination. Also requires identification of information technology (IT) security requirements and developing and implementing an effective IT security plan.

6.5.3.2. Workplace Safety (cmPMCOM3.2) [2159]

Ensuring that workplace safety is an integral part of developing products by applying systems safety analysis techniques throughout the project life cycle and integrating critical hazard elimination/mitigation measures into risk management and safety plans.

6.5.3.3. Safety and Mission Assurance (cmPMCOM3.3) [2160]

Activities associated with assuring the safety of personnel and property and success of the project. These activities include: Environmental Impact Statements; hazards analyses, elimination, and mitigation; mishap investigations; failure review boards; the flight safety review process; and safety, mission assurance, and risk management plans.

6.5.4. Professional And Leadership Development (cmPMCOM4) [2161]

The continuous development of professional and leadership qualities among all members of the program / project team through: mentoring and coaching opportunities; NASA cultural and functional training opportunities; oral and written communications that assure all are aware of status and decisions which affect them; recognition and reward for personal achievements; and the example of ethical behavior and compliance with Federal government policies at all times.

6.5.4.1. Mentoring and Coaching (cmPMCOM4.1) [2162]

Activities designed to help less-experienced members of the team to advance their knowledge and careers by: acting as a advisor, sponsor, or confidant who shares knowledge about NASA's functional, social, cultural, and political aspects or provides counseling to cultivate skills in order to enhance individual, team and organizational performance and growth.

6.5.4.2. Communication (cmPMCOM4.2) [2163]

Implementing effective strategies for clear and constructive communication both internally within the team and externally to stakeholders, other experts, contractors and others. Also involves communicating decisions in a timely manner.

6.5.4.3. Leadership (cmPMCOM4.3) [2164]

Influencing, inspiring, and motivating individuals and teams to accomplish goals; creating conditions for individuals and teams to be effective; and recognizing and rewarding individual and team achievements. Assigning, delegating, and reassessing tasks/ work assignments. Defining success criteria for performing tasks, tracking and managing success criteria for performance.

6.5.4.4. Ethics (cmPMCOM4.4) [2165]

Demonstrating integrity, ethical conduct, and acceptable behavior in all activities in line with federal government principles.

6.5.5. Knowledge Management (cmPMCOM5) [2166]

The capture, documenting, and sharing of lessons-learned and best practices in an organized fashion to reduce risk and improve performance on future programs / projects through the use of NASA processes and systems.

6.5.5.1. Knowledge Capture and Transfer (cmPMCOM5.1) [2167]

Identifying, capturing, evaluating and transferring knowledge in an organized fashion to improve performance and reduce risk associated with future programs, systems, and projects.

6.5.5.2. Knowledge Sharing (cmPMCOM5.2) [2168]

Sharing organizational practices and approaches related to generating, capturing, disseminating know-how and other content relevant to NASA's business and processes.

6.6. Leadership

6.6.1. Personal Effectiveness (CM_LDR1) [2020]

Manages self in a manner that displays willingness to learn, honesty, integrity, adaptability and resilience.

6.6.2. Discipline Competency (CM_LDR2) [2021]

Maintains up to date knowledge and skill competence in discipline. Sustains and grows the discipline competency of work unit.

6.6.3. Internal Awareness (CM_LDR3) [2022]

Understands and can use major NASA policies that impact operations such as the governance model, Strategic Management Handbook, Strategic Plan, ITAR, 7120, etc.

6.6.4. External Awareness (CM_LDR4) [2023]

Understands and keeps up-to-date on local, national, and international policies and trends that affect the agency and shape stakeholders' views and of NASA's impact on the external environment..

6.6.5. Strategic Thinking (CM_LDR5) [2024]

Formulates objectives and priorities, and implements plans consistent with the long-term interests of the agency. Capitalizes on opportunities and manages risks to align with agency objectives. Anticipates potential challenges or opportunities.

6.6.6. Business Acumen (CM_LDR6) [2025]

Understands and can strategically and efficiently use NASA's human, fiscal, financial, procurement, and acquisition systems.

6.6.7. Building Coalitions (CM_LDR7) [2026]

Develops networks and builds alliances; collaborates across boundaries to build strategic relationships and achieve common goals.

6.6.8. Leading Change (CM_LDR8) [2027]

Builds a shared vision of the future with others; acts as a catalyst for organizational change. Influences others to translate vision into action.

6.6.9. Leading People (CM_LDR9) [2028]

Creates an environment and work unit practices that foster and reward teamwork, develop others, leverage diversity, inspire collaboration and promote a results-focused mission accomplishment.

6.6.10. Results Driven (CM_LDR10) [2029]

Employs management practices such as prioritization, delegation and workload allocation that align organizational, functional, programmatic goals and individual goals and ensure that they are achieved in a timely and effective manner.

7. Competency Models of Professional Occupations

Restrictions and Limitations

Job Selection: The Competency Management System is not designed or used as an Agency employment and selection system. It does not meet, nor is required to meet, the Uniform Guidelines on Employee Selection Procedures (29 CFR 1607). When defining a job, competencies relate to, and can help define, the knowledge requirements for the position. But there are several other qualifications factors (such a duties, skills, abilities, location, job environment, etc.) that are defined and used during the competitive selection process. [For detailed information about the job selection process, see the NASA HR Desk Procedure on “The NASA Competitive Placement Plan for Positions GS-15 and Below (Including Trades and Labor Positions)”]

7.1. Acquisition & Contract Management Specialist - Competency Model

Ref	Section	Competency	Competency Type
1	6.1.1	Procurement Strategy Development/Understanding Sourcing	Developmental
2	6.1.2	Defining Procurement Requirements	Developmental
3	6.1.3	Defining Contractual Relationships/Performance Based Acquisition	Developmental
4	6.1.4	Solicitation of Offers	Developmental

Appendix B: Guidelines for evaluating levels of proficiency

In the NASA Competency Model, levels of proficiency are intended to reflect an individual's depth of expertise in a competency. This section provides guidelines and criteria for assessing an individual's expertise level.

How will Tier Levels be used?

- Tier levels will be used by professional communities and agency functional offices to understand the capabilities of the workforce and better align that workforce with the agency's mission, current needs, and future demands.
- The tier levels will be used by employees, managers, professional communities, functional offices, and leadership to help locate expertise in the agency in a reliable and systematic way.
- Tier levels will be used in the employee development process to help employees, managers, and the human resource development community identify gaps and proficiency targets and provide opportunities to refine or enhance the individual's level of expertise in a selected competency.

What are the Tier Levels?

- Tier level 1** "***Basic Knowledge***": An individual has a basic knowledge of the subject matter and shows an awareness of how this competency relates to their job.
- Tier level 2** "***Working Knowledge***": An individual has a working knowledge of the subject matter such that they are able to effectively apply that in their job.
- Tier level 3** "***Proficient***": Through the experience of applying their knowledge on the job, or other related activities, an individual has developed a thorough understanding of the subject matter AND is highly proficient in being able to apply that knowledge in their work environment.
- Tier level 4** "***Subject Matter Expert***": Through years of experience, or advanced study, an individual has developed a comprehensive understanding of the subject matter and its interactions with other disciplines/competencies. The individual has advanced their set of skills to be able to apply their expertise to a multitude of projects and situations. The individual utilizes their in-depth knowledge to communicate and collaborate with peers within their normal work environment and outside to other professional business or technical communities.

How do you evaluate the Tier Levels?

- Compare an individual's expertise in each competency with the "**Tier Indicators Table**" to determine their proficiency level.
- The tier definition will in most cases provide an adequate benchmark on which to base your assessment.
- For a more refined analysis, use the general indicators in the knowledge measurement section of the table. You should be able to meet the intent for all of the items listed under a single tier column.

NOTE: If you fail to meet one or two of the items, you may still select this tier rating providing that you meet the overall intent of the tier definition. However, this may show some areas where additional development or experience is needed.

If you would like more information, or detailed instructions, read the sections below.

Employee Competency Identification & Self Assessment

- Using the competency dictionary, identify the competencies that best describe your areas of expertise or knowledge.
- Log into the CMS tool and select or add the competencies you have identified as part of your personal portfolio.
- For each competency, identify your level of proficiency and submit your self-assessed tier rating. In making these assessments you will need to:
 - ▶ Review the “[tier level assessment example](#)” and “[important things to keep in mind](#)” in the sections below.
 - ▶ Review Appendix D of the CMS Dictionary to determine if there are any specific tier indicators established by the functional/professional community
 - ▶ Review the tier definitions and general indicators in the “[Tier Indicators Table](#)” below.
- OPTIONAL: For each competency, you can submit rationale for how you determined your rating, or you can provide supporting information that relates your experience in applying your competency. This information can help your supervisor with their assessment, as well as, help peers and other employees locate someone with your particular expertise.

Manager Competency Assessment and Validation

- Identify the competencies for the employees that are to be assessed. At a minimum, you should be reviewing competencies where the employee has identified themselves at Tier level 3 or 4, or where they have elected not to perform a self-assessment. (Note: *The system allows you to validate any and all levels at anytime*)
- Evaluate the employee’s level of expertise for each competency being reviewed. In making your assessments you will need to:
 - ▶ Review & discuss with the employee their past jobs, projects, and activities in relation to their competencies. (Note: *Some of this information may have been submitted by the employee in the CMS Tool when they updated their portfolio.*)
 - ▶ Review the “[tier level assessment example](#)” and “[important things to keep in mind](#)” in the sections below.
 - ▶ Review Appendix D of the CMS Dictionary to determine if there are any specific tier indicators established by the functional/professional community
 - ▶ Review the tier definitions and general indicators in the “[Tier Indicators Table](#)” below.
- Log into the CMS tool and submit your assessed tier rating for each competency and employee being reviewed.

NOTE: *There is an optional comment block in which you may choose to provide as part of your assessment:*

- *an explanation for your tier rating, or,*
- *supporting information that was used to help make your assessment, or,*
- *notes about areas needing additional employee development or experience.*

- Discuss with the employee the results of your assessment and any opportunities for further competency development.

Questions/Feedback/Suggestions

For suggestions on improvements to the tier level general criteria, the tier evaluation process, or any competency specific criteria, you can submit your comments online in the CMS Tool or please contact the CMS Operation Manager at your Center.

IMPORTANT Things to keep in mind

- ❑ The tier levels are intended to reflect an individual's level of expertise for specific competencies.
Tier level assessments do not represent an employee's overall capability or their performance level for his/her current position. Be careful not to misconstrue the knowledge measurement areas as performance standards.
 - ▶ *As an example: The CMS Tier validation process identifies an individual's level of proficiency by looking at how the employee uses his/her knowledge/expertise to identify and resolve specific competency related problems. It is not to evaluate the employee's overall skill in solving problems.*
 - ▶ Where does this become a factor or issue? You may consider that an individual exhibits tier level 3 expertise in solving problems relating to his/her knowledge of robotics. That does not mean, that the employee can solve problems of a similar nature at this same level in other competency areas, such as budget management.
 - ▶ **Rule of Thumb: Consider the individual's expertise for each competency to be unique. Therefore, each competency for every person should be evaluated based on it's own merits.**

- ❑ In some cases, grade levels can help with your assessment, but is not a true measure of expertise.
Example: A person typically advances in responsibility and grade level as a result of their experience and performance. You can show that in most cases, this is an indirect measurement of their level of expertise. As a person becomes more knowledgeable in their discipline and in their skill to apply that knowledge, they can improve their performance and increase their scope of responsibility. However, not all positions/promotions work this way. Sometimes employees are promoted due to other qualifications or skills, not because they are the subject matter expert. As an example, for most management positions, individuals are selected for their leadership and management skills as much as, or more than, their technical expertise.

- ❑ Tier level evaluations reflect the employee's expertise, not the level of expertise required by the position the employee encumbers.
There will be cases where the tier proficiency required by position may be higher or lower than the employee's current capability. The evaluation should be for the employee at his/her current level of expertise, not the level the position requires..

- ❑ Time alone is not a measure of a person's level of proficiency.
With time and experience, most individuals will become very good at what they do. So in this validation process, the expectation is that most people with sufficient experience will be assessed at Tier level 3 "Proficient in their competency". However, to become a subject matter expert the expectation is that an individual had done something extra to develop their expertise, beyond the experienced gained over time from performing well in the same or similar type of job.

- ❑ The tier indicators are simple guidelines.
It is not an exhaustive list, nor are the criteria perfect. It is intended to be used as a common frame of reference, so no matter the professional discipline, the organization, or the individual, everyone understands the scope and context around the information being collected and presented in reports.

Tier Level Assessment Example

The following example shows how tier levels might be applied in a typical career development scenario. For this example, a person graduates from college, is hired by NASA, and works in a specific field for over 20 years. It illustrates the expectations of this process and provides a frame of reference to help relate other career development scenarios.

- An individual graduates with an electrical engineering degree and is hired in a GS-854-7 AST, computer engineering position to work test and checkout on the Space Shuttle Main Engines avionics system.
- After several months to a year, the employee begins to relate her education to the principles of the avionics competency and how it is applied in the shuttle test and checkout process. The employee would select “Avionics” as one of her competencies at Tier Level 1 “Basic Knowledge”. (For reference, the employee is at the GS-7/9 level.)
- After 1 to 3 years in this position, the employee would take training classes, learn on the job, and gain experience from applying her knowledge on the various checkout tasks. This would advance her expertise to a Tier Level 2 “Working Knowledge”. (The employee is at the GS-11 level.)
- After 3 to 7 years, the employee would continue to learn more about avionics systems, how to test, how to troubleshoot, how to analyze data, how to develop and present technical reports, etc. She would become proficient in applying her knowledge of “avionics” and therefore advance to a Tier 3 level. (The employee may also have received a promotion to the GS-12 or GS-13 level.)
- After 7 or more years, the employee would take on more lead responsibilities and work on various projects. At this point, the employee decides whether to make a career change, or to continue to work in her professional field and further develop her expertise.
 - ▶ If she decided to take a management position, then the employee starts her new career with a thorough understanding of the subject of “avionics” and plenty of real life experience. However, even though this is a promotion, it does not imply that she has advanced to being a subject matter expert. As a manager, she will begin to utilize and build expertise in other skills and competencies, such as leadership and project management. And depending on the position, she may not even utilize her avionics expertise anymore. So she would remain at a tier level 3 for this competency.
 - ▶ If she decides to continue to work in her professional field, she may work on various other projects, move to different job positions, or take advanced academic courses. During this time, she would acquire new knowledge about avionics and computer systems and experience in applying that new knowledge. The employee would participate in Center, Agency or industry working teams or panels. All of this would help her to be recognized by her peers as a subject matter expert and therefore considered Tier Level 4.

NASA Competency Management System

Workforce Competency Dictionary

Tier Indicators Table

	TIER 1	TIER 2	TIER 3	TIER 4
Quick Reference	Basic knowledge	Working knowledge	Proficient	Subject matter expert
Definition	An individual has a basic knowledge of the subject matter and shows an awareness of how this competency relates to their job.	An individual has a working knowledge of the subject matter such that they are able to effectively apply that in their job.	Through the experience of applying their knowledge on the job, or other related activities, an individual has developed a thorough understanding of the subject matter AND is highly proficient in being able to apply that knowledge in their work environment.	Through years of experience, or advanced study, an individual has developed a comprehensive understanding of the subject matter and its interactions with other disciplines/competencies. The individual has advanced their set of skills to be able to apply their expertise to a multitude of projects and situations. The individual utilizes their in-depth knowledge to communicate and collaborate with peers within their normal work environment and outside to other professional business or technical communities.
Knowledge Measurements				
Use of Tools & Best Practices	Shows a basic knowledge of competency-related tools and best practices.	Exhibits ability to effectively use competency-related tools and best practices to perform their job.	Demonstrates skilled proficiency in their use of competency-related tools and best practices in their work environment.	Recognized by peers in their community and/or management, as having comprehensive knowledge of competency-related tools and best practices, how to apply them and how to improve them.
Knowledge and application of Policy & Standards & other documents	Shows a basic knowledge of competency-related policies, standards and other documentation..	Exhibits ability to effectively use their knowledge of competency-related policies, standards and other documentation to successfully perform their job.	Demonstrates skilled proficiency in their ability to incorporate their knowledge of competency-related policies, standards and other documentation to impact and modify systems and process in their work environment.	Recognized by peers in their community and/or management, for their expert ability to establish or modify competency-related policies, standards or technical specifications and/or development of other discipline related documentation utilized in their professional business or technical communities.
Information Collection & Analysis	Understand the basic information/data elements related to their competency.	Exhibits ability to effectively compile and analyze competency-related data for their job.	Demonstrates skilled proficiency in their ability to compile and summarize data, produce technical outputs and provide complex	Recognized by peers in their community and/or management for their ability to provide a comprehensive data analysis to determine performance of organization or discipline-related systems, processes

NASA Competency Management System

Workforce Competency Dictionary

	TIER 1	TIER 2	TIER 3	TIER 4
Quick Reference	Basic knowledge	Working knowledge	Proficient	Subject matter expert
			analysis for their work environment.	and events.
Problem Identification & Resolution	Shows an ability to review previously identified competency related problems and understand the applied solution.	Exhibits ability to effectively utilize their knowledge to routinely identify and solve work-related problems in their competency.	Demonstrates skilled proficiency in their ability to develop or change procedures/processes to resolve and/or prevent difficult technical/business issues.	Recognized by peers in their community and/or management for their comprehensive knowledge of the impact and interactions between multiple business/technical systems/processes that enables them to identify, assess and resolve complex technical or business problems.
Professional Development & Communication	Shows an ability to read and comprehend basic competency-related knowledge and information.	Exhibits ability to research, learn, and apply competency-related information to their job and effectively communicate that to peers in their professional community.	Demonstrates skilled proficiency in their ability to generate and present technical or functional documents and briefings to a variety of technical, functional, and/or management audiences.	Recognized by peers in their community and/or management for their comprehensive knowledge of the subject matter and their communication skills, they serve as an Agency, Center, and/or industry-wide resource for information and are often technical/business expert representatives on Center, Agency, industry, or academic working groups, boards, or panels.
Process/System Application, Assessment, & Integration	Shows a basic knowledge of competency-related processes/systems and the ability to follow prescribed procedures and implement plans.	Exhibits the ability to effectively utilize their knowledge to review and assess technical and/or business processes for impacts to the work flow.	Demonstrates skilled proficiency in their ability to apply their knowledge to assess and integrate across organizational, functional, or competency boundaries when developing or modifying business processes and/or technical systems.	Recognized by peers in their community and/or management for their expert ability to assess customer, system, or functional requirements in relation to their specific discipline and provide comprehensive solutions/products that meet the resource, technical, or situational constraints.

Appendix C: Revision Overview

Revision 7a Changes

ADDITIONAL CHANGES

Change#	Competency Title
789	Added Chapter 6 - a new category of competencies, the Developmental Competencies.
787	Add developmental competencies for the Acquisition & Contract Management community
788	Add developmental competencies for Engineering community: <ol style="list-style-type: none"> 1) Project management 2) Systems Engineering 3) Project Management & Systems Engineering Common Developmental Competencies
768-777	Add developmental competencies for the NASA Leadership Community
791	Added/Documented skills for the Human Resources community
790	Added Chapter 7 – Competency Models of Professional Occupations – a way to associated the 3 types of competencies/skills to a professional community. The competency models added were : <ol style="list-style-type: none"> 1) Acquisition and Contract Specialist (1102) 2) HR Specialist 3) Purchasing Agent (1105) 4) Project Managers 5) Systems Engineering 6) NASA Leadership

DELETED COMPETENCIES

Change#	CompID	Competency Title
		Back-out the Procurement Competencies added in Revision 7.
786		<p>Since the capability to use developmental competencies was added in revision 7A, it was necessary to rework the procurement competencies and to remove the 17 integrated/workforce competencies that were added in revision 7, and to modify and move them to the developmental competency area.</p> <p>The 3 level 1 competencies (and the associated 14 level 2 subcompetencies) that were added as part of Revision 7 were deleted from the system. No employee or position data needs to be maintained for historical purposes because these competencies were never fully implemented. Therefore the competencies were deleted from the system, versus inactivating them. The Competencies IDs can be re-used in future revisions.</p>
	181	1.5.2.0 Acquisition Planning (ACQPLAN)
	182	1.5.3.0. Contract Formation (CONFORMAT)]
	183	1.5.4.0 Contract Management and Performance Assessment (CONPERFORM)
1124-1137		Level 2 subcompetencies.

Revision 7 Changes

NEW LEVEL 1 COMPETENCIES

Change#	CompID	Competency Title
	179	Competency ID intentionally skipped. Reserved for future use.
778	180	1.5.1.0 Contracting Officer Technical Representative (COTR) Support (COTR) The 3 competencies "duplicates" the existing Acquisition Sub-competencies in section 1.2.2 in order to transition them to the "Level 1 " category.
778	181	1.5.2.0 Acquisition Planning (ACQPLAN)
778	182	1.5.3.0. Contract Formation (CONFORMAT)]
778	183	1.5.4.0 Contract Management and Performance Assessment (CONPERFORM)

MODIFIED LEVEL 1 COMPETENCIES

Change#	CompID	Competency Title
740	28	Reliability & Maintainability Engineering & Assurance
711	40	Fundamental Human Factors Research
726	41	Human Factors Engineering
704	42	Fundamental Physics
741	123	Risk Management
745	139	Software Assurance Engineering
708	143	Fire Protection Engineering
746	149	Mishap Investigation
710	150	Workplace Safety
709	151	Emergency Management
754	169	Policy Management

ADDITIONAL CHANGES

Change#	Competency Title
620	Added new Section 1.5 "Acquisition Community Competency Suite"

NEW LEVEL 2 COMPETENCIES

Change#	CompID	Parent Level 1 Competency	Level 2 Competency Title
778	1138	Contracting Officer Technical (COTR) ...	1.5.1.1 Procurement Planning and Contract Formation
778	1139	Contracting Officer Technical (COTR) ...	1.5.1.2 Contract Management
778	1124	Acquisition Planning	1.5.2.1 Strategic Planning/Procurement Strategy Development
778	1125	Acquisition Planning	1.5.2.2 Market Research/Managing Competition
778	1126	Acquisition Planning	1.5.2.3 Small Business and Preference Program Participation
778	1127	Acquisition Planning	1.5.2.4 Defining Procurement Requirements
778	1128	Acquisition Planning	1.5.2.5 Performance Based Acquisition
778	1129	Acquisition Planning	1.5.2.6 Defining Contractual Relationships
778	1130	Contract Formation	1.5.3.1 Solicitation of Offers
778	1131	Contract Formation	1.5.3.2 Bid Evaluation
778	1132	Contract Formation	1.5.3.3 Proposal Analysis and Evaluation

778	1133	Contract Formation	1.5.3.4 Contract Negotiation
778	1134	Contract Formation	1.5.3.5 Contract Award
778	1135	Contract Mgmt & Performance Assessment	1.5.4.1 Manage Contract Requirements
778	1136	Contract Mgmt & Performance Assessment	1.5.4.2 Contract Performance Management and Financial Management
778	1137	Contract Mgmt & Performance Assessment	1.5.4.3 Contract Dispute Resolution and Termination
757	1140	Business IT Systems	1.1.2.4 IT System and Requirements Analysis
758	1141	Business IT Systems	1.1.2.5 IT Sourcing and Asset Management
759	1142	Business IT Systems	1.1.2.6 IT Innovation Management
760	1143	Business IT Systems	1.1.2.7 IT Service Management and Delivery Operations
761	1144	Business IT Systems	1.1.2.8 Information Management

MODIFIED LEVEL 2 COMPETENCIES

Change#	CompID	Competency Title
712	1005	Biomechanics and Ergonomics Fundamental Research
713	1006	Habitability and Environmental Psychology Fundamental Research
714	1007	Perception and Psychophysics Fundamental Research
715	1008	Psychophysiology Fundamental Research
717	1010	Cognitive Science Fundamental Research
718	1011	Communication and Knowledge Management Fundamental Research
719	1012	Decision Making and Risk Management Fundamental Research
719	1009	Fatigue, Alertness, Circadian Rhythms Fundamental Research
720	1013	Organizational Science Fundamental Research
721	1014	Human-Machine Interaction Fundamental Research
722	1015	Manual Control Fundamental Research
724	1017	Training and Adaptation Fundamental Research
725	1018	Human Performance Fundamental Research
727	1019	Biomechanical Engineering, Technology, Standards
729	1021	Space Human Factors Engineering, Technology, and Standards
730	1022	Habitability Engineering, Technology, and Standards
731	1023	Perceptual Technologies and Standards
732	1024	Cognitive Technologies
733	1025	Human-Automation System Design
734	1026	Training Technologies
735	1027	Human Reliability and Human Error Analysis
743	1104	System Safety
744	1105	Probabilistic Risk Assessment
755	1079	IT Architecture
756	1081	Information Systems Security

DELETE LEVEL 2 COMPETENCIES

Change#	CompID	Parent Level 1 Competency	Level 2 Competency Title
723	1016	Fundamental Human Factors Research	Supervisory Control Fundamental Research
728	1020	Human Factors Engineering	Ergonomics Engineering, Technology, and Standards

Revision 6b Changes

NEW LEVEL 1 COMPETENCIES

Change#	CompID	Competency Title
695	177	Entry, Descent and Landing
696	178	Structural Impact Dynamics Characterization, Evaluation and Test Capability

MODIFIED LEVEL 1 COMPETENCIES

Change#	CompID	Competency Title
697	92	Laser/Lidar Technology

Revision 6a Changes

NEW LEVEL 1 COMPETENCIES

Change#	CompID	Competency Title
528	175	Simulation Systems Competency
588	176	Legal Assistance

MODIFIED LEVEL 1 COMPETENCIES

Change#	CompID	Competency Title
520	121	Cost Estimation and Analysis
591	125	Legal Application Practice
524	89	Advanced Mission Analysis
551	39	Habitability and Environmental Factors
550	31	Cell & Molecular Biology

DELETED LEVEL 1 COMPETENCIES

Change#	CompID	Competency Title
552	33	Neurobiology

NEW LEVEL 2 COMPETENCIES

Change#	CompID	Parent Level 1 Competency	Level 2 Competency Title
533	1110	Control Systems, Guidance & Navigation	Control Components
534	1111	Control Systems, Guidance & Navigation	Control Electronics
501	1112	Legal Application Practice	International Law
614	1113		Commercial Law
590	1114	Legal Assistance	Patent Agent
602	1115	Human Capital Management	Classification
603	1116		Compensation
604	1117		Employee Benefits
605	1118		Employee Development
606	1119		Employee Relations
607	1120		Labor Relations

Change#	CompID	Parent Level 1 Competency	Level 2 Competency Title
608	1121		Performance Management
609	1122		Recruitment/Placement
610	1123		Workforce Planning

MODIFIED LEVEL 2 COMPETENCIES

Change#	CompID	Parent Level 1 Competency	Level 2 Competency Title
589	1082	Legal Assistance	Paralegel
615	1083	Legal Application Practice	Intellectual Property Law
616	1084		General Law
617	1085		Contracts Law
618	1086		Personnel/EEO Law
619	1087		Environmental/Real Property

ADDITIONAL CHANGES

Change#	Competency Title
620	Remove the HCM sub competencies added in Revision 6. (ref DCR No 592-597). They will be replaced with 9 different HCM sub-competencies. (Ref DCR No 602-610)
565	Defer the change to delete “Detector Systems” The competency is to remain Active for Revision 6A and will be schedule for deletion in a future revision.

Revision 6 Changes

NEW LEVEL 1 COMPETENCIES

Change#	CompID	Competency Title
535	174	Student Trainee

MODIFIED LEVEL 1 COMPETENCIES

Change#	CompID	Competency Title
508	20	Sensors & Data Acquisition - Aeronautics
525	90	Aerospace Systems Concept Development & Technology Assessment
526	91	Advanced Analysis and Design Method Development
529	29	Quality Engineering & Assurance
530	27	Safety Engineering and Assurance
531	143	Fire Protection Engineering
532	150	Workplace Safety
544	80	Computer Systems and Engineering
566	62	Mechanics and Durability

586	1109		Liquid Engine Systems
592	-	Human Capital Management	Human Capital Leadership & Planning
593	-		Workforce Planning & Analysis
594	-		Workforce Recruitment & Retention
595	-		Workforce Learning & Capability Building
596	-		Leadership & Organization Development
597	-		Performance Culture & Workplace Environment

MODIFIED LEVEL 2 COMPETENCIES

Change#	CompID	Competency Title
539	1003	Work Performance Leadership

ADDITIONAL CHANGES

Change#	Competency Title
518	Move 5.1.8. Terrestrial & Planetary Environmental Science and Engineering (PLANETENV) [23] From the 5. Science Knowledge Domain To the 2. Engineering & Technology Knowledge Domain.
569	Move "Fluid Physics" (43) from section 2.11 Thermal/Fluid Competency Suite to section 5.3 Physical Sciences Suite
570	Move "Advanced Materials and Processing Science" (65) from section 2.10 Structures, Materials mechanics competency suite to section 5.3 Physical Sciences competency suite.
571	Move "Electromagnetics" (12) from section 2.9 Sensor Systems competency suite to section 2.7 Electrical & Electronic competency suite.
511	Page 2 Item - 1.2.2.3 Assessment is misspelled as "Assesment"
513	Page 69 - 71 Item - Captions Competencies is misspelled as "Comptencies"

Appendix D: Competency Tier Indicators

This section is to identify any additional indicators for a specified competency, as defined by the competency stakeholders and the appropriate agency professional community. When evaluating levels of expertise, these indicators are to be used in addition to the general tier indicators defined in Section B. If you have any questions, please contact the responsible competency stakeholders. (reference Appendix A)

ID	Competency	Tier Level	Indicator
125	Legal Application Practice	All	Member in good standing of the bar of either a Federal court or the highest court of any state in the United States or the District of Columbia.

INDEX

A

Acoustics.....	39
Acquisition and Contract Management.....	32
Acquisition Planning.....	32
Advanced Analysis and Design Method Development.....	64
Advanced Chemical & Thermal Prop.....	55
Advanced Experimentation and Testing Technologies.....	65
Advanced In-Space Propulsion.....	55
Advanced Materials and Processing Science.....	76
Advanced Measurement, Diagnostics, and Instrumentation.....	64
Advanced Mission Analysis.....	38
Advanced Technical Training Design.....	66
Aerodynamics.....	39
Aeroelasticity.....	39
Aerospace Medicine.....	40
Aerospace Systems Concept Development & Technology Assessment.....	38
Aerothermodynamics.....	40
Air Traffic Systems.....	40
Airbreathing Propulsion.....	56
Analytical and computational Fluid Mechanics.....	58
Analytical and Computational Structural Methods.....	61
Astrobiology.....	72
Astromaterials, Collections, Curation & Analysis.....	72
Astronomy & Astrophysics.....	72
Avionics.....	51

B

Behavioral Health.....	40
Bioengineering.....	41
Bioethics.....	76
Biology and Biogeochemistry of Ecosystems.....	74
Biomechanical Engineering, Technology, Standards.....	46
Biomechanics and Ergonomics Fundamental.....	42
Biomedical and Research Clinical Ethics.....	76
Biomedical Engineering.....	41
Biomedical Research.....	76
Biomimetics.....	41
Budgeting Management.....	23
Business IT Systems.....	18, 92
Business Management.....	19
Business Work & Team Management.....	70

C

Cell & Molecular Biology.....	76
Chemistry/ Chemical Engineering.....	49
Classification.....	30
Clerical Student Trainee.....	31
Climate Change and Variability.....	75
Cognitive Science Fundamental Research.....	43
Cognitive Technologies.....	47
Combustion Devices Design and Analysis.....	57
Combustion Science.....	56
Commercial Law.....	22
Commercial Technology.....	20
Communication and Knowledge Management Fundamental Research.....	44
Communication Networks & Engineering.....	51
Compensation.....	30
Computer Systems and Engineering.....	49
Configuration Management.....	69
Construction Management.....	28
Contamination Control.....	62
Contract Formation.....	32
Contract Management.....	32
Contract Management and Performance Assessment.....	33
Contracting Officer Technical Representative (COTR) Support.....	32
Contracts Law.....	21
Control Components.....	54
Control Electronics.....	54
Control Systems, Guidance & Navigation.....	53
Cost Estimation Analysis.....	23
Counterintelligence/Counterterrorism Analysis, Investigation and Liaison.....	25
Crew Systems and Aviation Operations.....	41
Cryogenics Engineering.....	64

D

Data Systems and Technology.....	49
Data Visualization.....	50
Database Management Systems.....	50
Decision Making and Risk Management Fundamental Research.....	44
Design and Development Engineering.....	33
Detector Systems.....	59
